What is the tropic of cancer and the tropic of capricorn

(Beginner)> "ONCLICKY =" window.open (this.href, 'win2', 'state = no, toolbar = no, scrollbars = yes, titlebar = no, menåbar = no, resizable = yes, width = 640, height = 480, directory = no, position = no '); Returns false; "rel =" nofollow "> The tropic of cancer is the circle that marks latitude 23.5 degrees to the north, where the sun is directly at the top of noon of June 21, the beginning of summer in the northern hemisphere . The tropic of Capricorn is the circle that marks latitude 23.5 degrees south in which the sun is directly top at noon of December 21st, the beginning of winter in the northern hemisphere. When the lines were nominated 2000 years ago, the sun was in the constellation of Capricorn during the winter and cancer solstice during the summer solstice (from here the names). Now due to the precession of the equinoxes that the sun is no longer in these constellations during these Times, but the names remain. The equator is the circle in which the sun is directly top at noon on equinoxes. Arctic and antarctic wheels are located at ± 66.5 degrees latitude. Note that 66.5 + 23.5 equals 90 degrees. This means that December 21st, when the sun is directly NT above the tropic of Capricorn at noon will not be visible from the Arctic circle. Then above the Arctic circle, there is a period during the winter when the sun remains under the horizon. The same applies to the Antarctic circle during the southern hemisphere. On June 21st, when the sun is directly above the tropic of cancer at noon, it is not visible from below the Antarctic circle. This page was last updated on 27 June 2015. Cathy graduated from Cornell's degree in May 2003 and his Master of Education in May 2005. She did research studying wind patterns on Jupiter while in Cornell . Now you are a land science teacher of the 8th degree in Natick, but. This article concerns the circle of latitude. For other uses, see Tropic of cancer (disambiguation). Northern latitude line in which the sun can be coordinated directly at the top: 23 Å Ć 26 ä,~ Å² 12.5 Å²n 0 Å ° 0 0 Å Ä ĉ ~ Å²wÄ` Ä Ä₂ / Ä Ä Ä₂23.436806 Å ° N -0.00000-Ä ° EÄ` Ä »Ä₂ / 23.436806; -0.00000Ä` Ä »Ä₂ (Prime Meridian) Map of the world showing the tropic of axial axial movement cancer relationships (Ä®) at the tropical and polar circles of the tropic of cancer, which is also indicated as the northern tropic It is the northernmost circle of latitude on the Earth where the sun can be directly up. This occurs on the June solstice, when the northern hemisphere is tilted towards the sun to its maximum size. [1] Also reaches 90 degrees below the horizon at the solar midnight in the December solstice. Using a continuously updated formula, the circle is currently 23 ° 26 Ä²11.3 Ä³ (or 23,43648 Ä) north of the equator. The counterpart of his southern hemisphere, marking the southernmost position in which the sun can be directly high, is the tropic of Capricorn. These tropics are two of the five main rims of latitude that mark land maps, the others are the arctic and antarctic circles and the equator. The positions of these two latitude circles (relating to the equator) are dictated by the inclination of the land rotation axis relative to the plane of its orbit, and since the inclination changes, the position of these two circles also changes . Name When this line of latitude has been named in the last centuries BC, the sun was in the cancer of the constellation (Latin per crab) to the June solstice, time every year that the sun reaches its Zenit to this latitude. Due to the precession of equinoxes, this is no longer the case; Today the sun is in Taurus at the June solstice. The word "tropic" itself derives from the Greek "Trope (Ä` Ä` ÄZÄ` ä,~ ÄZ Ä®) ", which means to turn (change of Or circumstances), inclination, referring to the fact that the sun seems to "turn back" to the solstices. Drift Carretera 83 (VÄ ě to short) Zaragoza-Victoria, 27 + 800 km can seen. The tropic of cancer location is not fixed, but changes constantly due to a slight longitudinal alignment relative oscillation of the Earth all'ecitlico, the plane in which the orbit of the earth around the sun. The axial tilt of the Earth varies over a 41,000 year period from 22.1 to 24.5 degrees and the 2000 [update] is about 23.4 degrees, which will continue to remain valid for about a millennium. This wobble means that the Tropic of Cancer is currently drifting southward at a rate of almost half arcecondo (0.468 Ä²) of latitude, or 15 m (49 ft) per year. The position of the circle was exactly 23 Å ° 27, in 1917 and will be at 23 Å ° 26 years in 2045. [2] The distance between the Antarctic Circle and the Tropic of Cancer is essentially constant as they move in tandem. All it requires continuous equator, which of course, is also unrealistic, the equator the same moves, but the major moves of this kind are rare 80 years ago are rare. See axial tilt and circles of latitude for further details. All geographical map coordinates using: OpenStreetMapÄ Download the coordinates as KML north of the Tropic are the subtropics and the northern temperate zone. The southern line equivalent to the latitude of the equator is called the Tropic of Capricorn, and the region between the two, centered on the equator, is tropical. In 2000, more than half the world's population lived north of the Tropic of Cancer. [3] There are approximately 13 hours, 35 minutes of daylight during the summer solstice. During the winter solstice, there are 10 hours, 41 minutes of daylight. Using 23 Å ° 26'N to the Tropic of Cancer, the Tropic passes through the following countries and territories starting at the Prime Meridian and directed eastward: coordinated Country, territory or sea Notes 23 Å ° 26 ä ~ Ä` ° 0 ° Å` Å`ele Ä₂ / Ä Ä »Ä₂23.433 Å Ä ° N 0.000 ° EAA» Ä₂ / 23 433; 0.000Ä` Ä »Ä₂ (Prime Meridian) Ä Ä Algeria 23 ° 26 ä ~ Ä` ä ~ Ä` ° 51A 11 23 433 ä ~ Ä` ° / AA» Ä₂23.433 Å Ä ° N 11.850 ° Å 23,433 Å ° N 11.850 ° and Ä »Ä₂ / 23,433; 11.850Ä` Ä »Ä₂ (Niger) Ä ĉ Ä iger 23 ° 26 ä ~ Ä` ° 12 17 27` ä ~Ä» Ä₂ / Ä »Ä₂23.433 Å ° N ° 23 433 12,263 Å Ä N ° Ä` ° 12.263Ä EAA »Ä₂ / 23,433; 12.263Ä` Ä »Ä₂ (Libya) Ä ĉ Libya The tropics touches on the northern most point of Chad to 23 Å ° 26 ä ~ Ä` Ä²n 15 ° 59 ä ~ Ä²eÄ» Ä₂ / Ä »Ä₂23.433 Å ° Ä ° N 15.983Ä EAA »Ä₂ / 23,433; 15.983Ä` Ä »Ä₂ (northern most point of Ciabello) 23 Å ° 26 ä ~ Ä²n 25 Å ° 0 0 Ä²ÄÄ» Ä₂ / Ä »Ä₂23.433 Å ° N 25.000 Å ° Ä` ° 23433 Å ° N 25.000 EAA »Ä₂ / 23,433; 25,000 Å Ä »Ä₂ (Egypt) Ä ĉ Egypt The Tropic passes through the lake Nasser 23 Å ° 26 ä ~ Ä` ä ~ Ä` ° 33 30 ZootÄÄ» Ä₂ / Ä »Ä₂23.433 Å ° N 35.500 Å ° EAA »Ä₂ / 23,433; 35.500Ä` Ä »Ä₂ (Red Sea) Red Sea 23 to 26 ° ~ ä` 38 Å ° 38A ~ Ä²ÄÄ» Ä₂ / Ä »Ä₂23.433 Å ° Ä ° N 38 633 23 433 Å ° Ä ° N 38 633 29 EAA »Ä₂ / 23,433; 38.633Ä` Ä »Ä₂ (Saudi Arabia) Saudi Arabia Ä ĉ Ä ° 23 26 ä ~ Ä` ä ~ Ä` ° 55 10 27 433 Za Ä` ° / AA» Ä₂23.433 Å Ä ° N ° 52,167 EA Ä »Ä₂ / 23,433; 52.167Ä` Ä »Ä₂ (United Arab Emirates) Ä United Arab Emirates Abu Dhabi Emirate only 23 Å ° 26 ä ~ Ä` 55 Å ° 24 - Ä²aÄÄ» Ä₂ / Ä Ä »Ä` Ä₂23.433 N ° 55,400 23.433Ä Ä Ä ° N ° 55,400 EAA »Ä₂ / 23 433; 55.400Ä` Ä »Ä₂ (Oman) Oman Ä ĉ The Tropic crosses Muscat, the capital of the country. 23 ° 26 ä ~ Ä` Ä ° 58 46 - Ä²aÄ` Ä »Ä₂ / AA» Ä₂23.433 Å ° N 58.767Ä` Ä ° EA »Ä₂ / 23 433; 58.767Ä` Ä »Ä₂ (Indian Ocean) Indian Ocean Arabian Sea 23 Å ° 26 ä ~ Ä` 68 Å ° 23 ZoeeÄ» Ä₂ / Ä »Ä₂23.433 Å ° / Ä 68,383 Å ° 23.433Ä Ä Ä ° N 68 383 29 EAA »Ä₂ / 23,433; 68.383Ä` Ä »Ä₂ (India) India Ä ĉ States of Gujarat, Rajasthan, Madhya Pradesh, Chhattisgarh, Jharkhand and West Bengal 23 26 Å ° 88 Ä` ° ä ~ ä` ° 27` / AA`Ä₂23.433 Å ° Ä ° N 88.783Ä EA» Ä₂ / 23,433; 88.783Ä` Ä »Ä₂ (Bangladesh) Ä Bangladesh Khulna, Dhaka and Chittagong Divisions of 23 ° 26 ä ~ Ä` Ä ° 9 Ä` ° 14 ° 14A 27Ä ä ~Ä» Ä₂ / Ä »Ä₂ Ä ° N 23 433 91 233 23 433 Å ° Ä ° Ä ° N 91.233Ä EAA »Ä₂ / 23 433; 91.233Ä` Ä »Ä₂ (India) Ä India State of tripura 23 Å ° 26 ä ~ Ä` Ä²n 91 ° 56 ä ~ Ä²aÄÄ» Ä₂ / Ä »Ä₂23.433 Å Ä ° N 91 933 23433 N ° Ä ° Ä ° 91.933Ä EAA »Ä₂ / 23,433; 91.933Ä` Ä »Ä₂ (Bangladesh) Bangladesh Chittagong Ä Ä ° 23 26 Division ä ~ Ä` ° 19 ° 19 ZonaÄ» Ä₂ / Ä »Ä₂23.433 Å N ° 92 317 ° 23.433Ä Ä Ä N ° 92317 Ä ° EAA »Ä₂ / 23,433; 92.317Ä` Ä »Ä₂ (India) Ä Indian state of Mizoram 23 Å ° ä,~ ä² sergeant 93 Å ° 23 - Ä²EÄÄ »Ä₂ / Ä` ä ĉ Ä₂23.433 Å ° n 93.383ä, Ä` ° - Ä₂ / 23,433; 93.383Ä` Ä »Ä₂ (Myanmar) Ä, state of myanmar chin, Sagaing division, Mandalay division, Shan state 23 Å ° 26 Ä² 98 Ä` ° 54 - Ä² Ä² / Ä²Ä» Ä₂23.433 Ä² ° N 98 900 Ä ĉ 23.433 Å ° N 98 900 Ä` ° EÄ` Ä »Ä₂ / 23,433; 98.900Ä` Ä »Ä₂ (China), provinces of China of Yunnan (passing about 7 km north of the border with Ä, Vietnam), Guangxi and Guangdong 23 Ä ĉ 26 ä,~ Ä` 117 Ä` ° 8 - Ä²aÄ` Ä »Ä₂ / Ä` Ä »Ä₂23.433ä, Ä` ° N 117.133 Å ° EÄ` Ä »Ä₂ / 23,433; 117.133Ä` Ä »Ä Ä ĉ Ä₂ Strett) Tawan Act of Taiwan age Ä.T.T.T.T.T.Th.s 8 zop Ä₂ ĉ E YPTOR ĉ EL` ä Ä` by, Ä U` ĉ 20133, Änd 8 ERU av,äÄ ä ĉ EJUä ĉ EARY ä ĉ EARY Ä eRU` Äya / ĉ Etah amongo. 120.133333 have to have the language of Chiayi?
