You can try the following methods before reaching to any conclusion to avoid this problem Impose a strict upper limit on the overall number of apps you have installed on your phone For better experience, don't overcharge your phone Always make use the best accessories including the charger and power bank with your phone Always make use the best accessories including the charger and power bank with your phone Always make use the best accessories including the charger and power bank with your phone Always make use the best accessories including the charger and power bank with your phone Always make use the best accessories including the charger and power bank with your phone Always make use the best accessories including the charger and power bank with your phone Always make use the best accessories including the charger and power bank with your phone Always make use the best accessories including the charger and power bank with your phone Always make use the best accessories including the charger and power bank with your phone Always make use the best accessories including the charger and power bank with your phone Always make use the best accessories including the charger and power bank with your phone Always make use the best accessories including the charger and power bank with your phone Always make use the best accessories including the charger and power bank with your phone Always make use the best accessories including the charger and power bank with your phone Always make use the best accessories including the charger and power bank with your phone Always make use the best accessories including the charger and power bank with your phone Always make use the best accessories including the charger and power bank with your phone Always make use the best accessories including the charger and power bank with your phone Always make use the best accessories including the charger and power bank with your phone Always make use the best accessories including the charger and power bank with your phone Always make use the best accessories including the charger and power bank with your phone Always make use the best acces the phone. Check and update them Always avoid installation of applications in the phone from the other sources than the Play Store. Remove the back cover from the phone if you use it. IT can be the reason you are facing this issue Perform a hard reset if nothing works Unresponsive Touchscreen The Moto E4 Plus comes with a 5.5-inch screen that is good enough to be trusted for performing various tasks. Because the touchscreen is connected directly with the motherboard in most of the gadgets, even a very basic fault can stop them from performing their task smoothly. Therefore, it's necessary for you to keep clear of this fact. The methods suggested below can help you a lot in this matter Update all the pending apps in your phone first of all Restart your phone and open it in Safe Mode. If it works fine, the issue in a device OS or in the installed apps. Uninstall the previously installed apps clean the screen which are stopping the screen not to perform its task reliably Check and make sure there is no physical or liquid damage caused to the screen internally Get the phone checked through if the problems and fixes) A device that runs on the Android Nougat could be expected to run low on performance and when it already has a 1.3GHZ Processor a 3GB RAM. If still there are performance-related problems which you are facing, the following methods work best for you. Begin with a simple reboot and see if the problem is gone. For the smooth performance, perform this at least once in a day regularly The level of data in the phone is at its top. Erase some data for smooth performance The apps installed should be up to the date. The version of OS should also be updated whenever the same is made available Installation of application from third-party sources should be avoided Don't use Quick Battery draining & slow charging This is a problem that creates a lot of issues for the users and often brings a very daunting experience for them. Well, you use it. There are tasks which consumes more juice from the battery and its god for you to be clear of the fact. However, in case you find that your phone is consuming extra battery even on a decent use, you can try the below listed methods and instructions. First of all, make sure you are not using a low quality charger/power bank. the heavy files through the Mobile Data The device Wi-Fi hot spot might be turned ON and shared with other gadgets Uninstall the apps which are not used regularly Avoid charging your phone from the PC's USB Don't use it while charging the problems could be due to outdated app and the OS version. Update them to the latest in case it is available The more information about the common Moto E4 Plus problems and fixes can be grabbed by posting a comment on the below section. Here you can find basic troubleshoot guide for all other posts on Android. Keep visiting our platform. Our Motorola mobile may experience various types of problem. However, one of the most annoying are those related to the SIM card. When this piece of plastic begins to fail, we may be completely cut off, with what that means. We are going to see therefore the possible causes of the problems with the SIM in Motorola and how to fix them. Although physical SIM cards as we know them have their days numbered, they are still essential to keep our voice and data line active. When we have problems with this piece of plastic, it is very possible that we are left without being able to do either one or the other. Let's see how to fix this problem on Motorola mobiles. SIM is not recognizedTry to clean the contactsIt is a common cause, but luckily very easy to solve. In this case we will have to remove the SIM and clean the contacts with a slightly damp cloth. Then we dry the card completely and reinsert it to test again. Are they well inserted? It is important to look at the position of the cards. Many times the position of the cards. correctly. We must therefore remove the SIM and check that we have proceeded correctly before looking for other solutions. Turn off the mobile off and on again. When we turn it on we can establish a new connection to the network, to see if the card is recognized again. Recognize SIM but no signal. In this case the terminal recognizes the SIM card, but there is no network signal. In this case we will have to do several checks to try to solve it. Move to another area where we can receive a signal, for example, outdoors. If we are unsure whether our operator provides service in that location, we can always review the coverage map on the operator's website. If airplane mode is activated, we will have to deactivate it. We will check if there is a software update available from Settings / System / System / System / Deactivate it. We will check that the "Preferred network type" is set to Automatic. (Settings> Internet and networks> Mobile network> Preferred network type.) If we have service problems when it is set to "Automatic", we can try a different configuration.SIM not activated remotely . We will solve doubts by calling our operator and verifying if the card is operational or not in order to function correctly. If not, it is possible that the problem will be solved in the same call. If we use DualSIMIf we are using two SIM cards and the problem is only in one of them, or even in both, we will have to go to the Settings of our mobile and enter SIM Cards. corresponding switch. If nothing works If none of the above works, we have few options left but we are sure that some will work. Enter safe mode entering Motorola's safe mode will allow us to check if an application may be causing a conflict with the SIM card. Try on another mobile: in this case, if we test the SIM on another mobile and it works without a problem, we will know that the fault is not with the card.Factory Reset - This is the last step before you think about physical damage. This method will leave our mobile as the first day at a functional level and we can see if the problem disappears. To do this we will have to follow the following steps. Charge the battery to 30% or more and turn off the phone.Press and hold the volume down button at the same time until the phone turns on.Press the volume down button to restart in recovery mode.Using the volume buttons, scroll to Wipe data / factory reset and then press the power button to select the option. Using the volume buttons, scroll to Yes and then press the power button to select the option. Using the volume buttons, scroll to Reboot system now and then press the power button until the screen goes dark, and then release it so it turns on normally.Damaged SIM or tray : in this case, we will have to contact our operator, since the SIM card may be damaged, so we may require a duplicate of it. If we still have to contact our operator, since the SIM card may be damaged, so we may require a duplicate of it. Technical Service.
