If you wish to put a watermark, like a "Draft Copy" or "Classified" label on your Pages document before printing or distributing a PDF, you can do it easily using Section Masters. You can place anything back there, such as text, shapes, or images. In this example, we'll place some diagonal text across the background and it will appear on all pages. You can also watch this video at YouTube (but with ads), Video Transcript: Let's look at how to create a watermark in Pages. So a watermark is something that marks the page. It doesn't get in the way of the text but clearly marks it as something like, maybe, classified or a draft or something like that. So as an example here we've got a regular Pages document. So this is not a page layout document. This is one where the text flows from one page to the next and I have some sample text in there. You want to watermark it so that when you print it out or create a PDF it's clear that this is not the finished document. We're going to use Draft Copy as an example watermark. So, we can start off by creating a text box that's going to have text in it. So I'll create a new text box here. You can see that the text box inserts itself in the middle of the page. It pushes all the text out of the way. We're not going to worry about all of that for now. For now let's just get the words Draft Copy in there. So I'm going to do it in all capital letters DRAFT COPY. I'm going to enlarge that a bit. So let's go to like 70 points and then let me click on the box here and enlarge the box so that it fits across. Center it and, you know, for good measure let's make this a kind of grey color here rather than having it something that will make it harder to read the text. Now I could go and make this so that it doesn't cause the text to wrap. If I were to do that then you would actually have this and the text in the same spot. It would be a watermark. It would work except that it would only be in this one place in our document. It wouldn't be on the other pages. So what we want to do is we want to move this to the Section Master. So we go to Arrange Section Masters and move object to Section Master and watch what happens. First, the text now flows over it because there are different layers. There are two layers in a Pages word processing document. There's the Section Master and there is the regular page text. Now we have this behind that. We have it there and this does a couple things. It makes it so the text now doesn't wrap around it. It kind of ignores that text box. Also, it's on every page of this section. There it is. DRAFT COPY. So that's great! Now let's continue to adjust it. I'm going to go back to Arrange Section Masters and say Make Master Objects Selectable. This is how we edit Master Objects. I can now click and select this text again whereas before I couldn't select it at all. It was like it was permanent. So I'm going to go and click on Arrange here and give it a little bit of an angle, thirty degrees. That looks really good there. I like how that works. Now I want to have more than one copy here. Let's change the zoom to 50%. I'm going to Copy and then I'm going to Paste. Look what's going to happen. When I Paste notice it pastes on the main document, on the main layer. So I need to now move this back to the Section Master. So now I have two copies here. So I'm going to put this one here. Now I have Draft Copy and Draft Copy. You can see I've got that for every page. I've got two of them. Now I can go to Arrange Section Masters and turn that off. Now this doesn't get in the way anymore. It's just there. Now when I print or create a PDF that grey draft copy text is going to be behind my regular text and everything else on the page and it all looks good. So I can go File, Print and you can see it's there on that. I can create a PDF of it and you can see it there. The same thing will happen when I print it. When it's time for me to remove it I can just go to Arrange Section Masters. Make them selectable. Select both of these. Delete it or change it to something else whatever I want to do and I've got the document back to normal. Watermarks serve as an essential aspect in the realm of document creation, providing a subtle yet effective way to convey a sense of ownership, authenticity, and professionalism. Whether you're designing a report, drafting a proposal, or preparing a brochure, adding a watermark can uplift the overall presentation of your document. If you're utilizing Apples Pages application on your Mac, iPhone, or iPad, you'll be pleased to know that the process of adding watermarks is user-friendly. This article will explore step-by-step instructions on how to add a watermark across all three Apple devices, along with tips, tricks, and considerations for optimal placement and design. Understanding WatermarksBefore diving into the technical aspects, its important to clarify what a watermark is. A watermark can be a logo, image, or text that is displayed on a page to indicate ownership. It often appears lighter than the main content of the document, allowing the crucial text to remain easily readable while subtly reinforcing the brand identity or the documents confidentiality. Watermarks can be effective in a variety of contexts: Brand Identity: Companies can reinforce their branding by incorporating their logos as watermarks. Copyright Protection: Individuals and businesses can protect their work by indicating ownership, deterring unauthorized use. Document Confidentiality: Watermarks can signal sensitivity, for example, Draft or Confidential can be useful for internal documents. Now lets look at how you can apply these concepts practically using Pages on different Apple devices. Adding a Watermark in Pages on MacAdding a watermark in Pages on a Mac can be accomplished in a few straightforward steps. Heres how you can do it. Step 1: Open Your DocumentFirst, launch Pages on your Mac and open the document where you wish to add a watermark. Step 2: Prepare Your WatermarkDetermine whether your watermark will be text-based (like Confidential or Draft) or image-based (such as a company logo). If its an image, ensure its formatted correctly (high resolution is preferable). Step 3: Add a Text WatermarkClick on the Text button in the toolbar at the top of the window. A text box will appear on your page. Click inside the box and enter the desired text. To style the text, go to the Format sidebar. You can change the font, size, color, and alignment. Adjust the opacity under the Text section to make the text appear more like a watermark. Typically, around 30% to 50% opacity works best. Step 4: Add an Image WatermarkGo to the Insert menu at the top of your screen and select Choose. Locate your watermark image and click Insert to place it in your document. Once the image is inserted, click on it and navigate to the Format sidebar. Adjust the opacity and size, ensuring the image does not overpower the text in your document. Step 5: Positioning Your WatermarkOn the Arrange tab within the Format sidebar, you can adjust the position of the watermark. Center it or place it diagonally across the page for maximum effect. Ensure that your watermark sends the desired message without detracting from the main content. Step 6: Send to BackTo ensure that your watermark is not obscured by text or images, right-click on it and select Send to Back from the context menu. Step 7: Preview and SaveOnce youve placed your watermark, use the Preview mode to review how it looks. If everything seems right, save your document to retain these changes. Adding a Watermark in Pages on iPhoneAdding a watermark in Pages on your iPhone requires a few different steps, primarily due to the smaller screen real estate. Heres how to do it: Step 1: Open Your DocumentLaunch the Pages app on your iPhone and open the document that requires a watermark. Step 2: Insert a Text WatermarkTap on the + icon at the top right corner of the screen. Choose Text from the pop-up menu. A text box will appear; tap to edit the text, then enter your desired watermark message. To adjust the formatting, tap on the text box, and then tap on Format in the floating menu. Here, you can modify font, size, and color. Adjust the opacity by navigating to Style and changing the opacity slider. Step 3: Insert an Image WatermarkAgain tap on the + icon, but this time select Photos or Media. Choose your watermark image from the Photos application. Tap on the inserted image to highlight it and bring up the formatting options. Adjust the size and opacity to ensure it complements the document without overwhelming it. Step 4: Position Your WatermarkTap and drag your watermark (whether its text or an image) to position it within the document. You can also rotate the watermark for a creative touch. Step 5: Send to BackTo maintain visual hierarchy, tap and hold your watermark until you see the option to Send to Back. Selecting this ensures your watermark remains in the background. Step 6: Save Your DocumentOnce you have done everything, tap the back arrow, and Pages will automatically save your adjustments. Adding a Watermark in Pages on iPadThe process for adding a watermark in Pages on an iPad is similar to that on the iPhone, but with a few differences due to the larger screen size. Step 1: Open Your DocumentLaunch the Pages app on your iPad and open the document that needs a watermark. Step 2: Insert a Text WatermarkTap on the + icon at the top right. Select Text. A text box will appear; tap it to edit and input your watermark text. Adjust the font, size, and color from the Format sidebar. Use the opacity slider to adjust how visible the watermark is. Step 3: Insert an Image WatermarkHit the + icon and navigate to Photos or Media. Select the watermark image you wish to use. Format this image by adjusting size and opacity settings in the Format sidebar. Step 4: Position the WatermarkClick and drag the watermark to your desired position on the page. If you choose to rotate it for artistic flair, use the corner handles. Step 5: Send to BackLike on the iPhone, you can tap and hold on the watermark and choose to Send to Back to avoid overlap with the main content. Step 6: Saving Your DocumentOnce satisfied with your watermark, tap the back button, and Pages will save your recent changes automatically. Tips for Using Watermarks EffectivelyKeep It Subtle: A watermark should enhance your document, not distract from it. Choose a light opacity and simple design. Consider Placement: Depending on the content of your documents, position your watermark strategically. A common choice is a diagonal placement across the page. Test Different Designs: Experiment with both image and text watermarks to determine what resonates best with your documents purpose. Use High-Resolution Images: If your watermark is an image, ensure it has a high enough resolution to avoid pixelation when printed or viewed on larger screens. ConclusionAdding a watermark in Pages on your Mac, iPhone, or iPad can elevate the professionalism of your documents significantly. While the steps may vary slightly depending on your device, the fundamental principles remain consistent. By understanding how to properly insert, position, and format your watermark, you can effectively communicate brand intimacy, protect your work, and add a touch of professionalism to any document. With these insights, you can now confidently add watermarks to your Pages documents, ensuring that your work stands out while maintaining the necessary ownership and protection signals. Whether for personal project management, business reports, or artistic displays, the power of watermarks is at your fingertips. Pages Welcome Whats new Add images, shapes, and media Position and style objects Use writing and editing tools Manage and organize documents Keyboard shortcuts Keyboard shortcut symbols Copyright You can add text, watermarks, logos, or other images that appear in the same place in the background of every page of your document. These repeated elements are called section layout objects. The more transparent you make the object, the more it fades into the background behind the document content. If your document is divided into sections, you can add different section layout objects to each section. Click one of the object buttons in the toolbar to add a text box, shape, or image to any page in the section, then drag it to where you want it to appear on each page. If you add a text box, type the text you want to appear. In the Format sidebar, click the Style tab. To adjust the transparency (opacity), drag the Opacity slider to make the object more or less transparent. Adjust the size and position of the object on the page. Choose Arrange> Section Layouts> Move Object to Section Layout (from the Arrange menu at the top of your screen). The object is moved to the background of every page in the section. Section layout objects are locked (made unselectable) by default. To edit or delete a section layout object, first make it selectable. Choose Arrange> Section Layouts> Make Layout Objects Selectable (from the Arrange menu at the top of your screen). Select the section layout object, then do one of the following: Remove the object completely: Press Delete. Lock section layout objects after editing: Deselect Make Layout Objects Selectable so section layout objects cant be moved or deleted by accident. Keep the object but remove it as a section layout object: Choose Arrange> Section Layouts> Move Object to Page. Helpful? Thanks for your feedback. Select version: macOS Sequoia 15 macOS Sonoma 14 macOS Ventura 13 Modifying this control will update this page automatically You can print a document with a watermark added to the printed page. You can create a simple text watermark in the font, font size, and color of your choice, and choose where it appears on each page. Helpful? Thanks for your feedback. Choose a document type, adjust page size and margins, change how text looks, and more. Turn handwriting into text with Apple Pencil, add annotations, and draw within a Pages document. Applications and Services / Pages I'm trying to add different watermarks in different pages. I managed to add a watermark but it shows the same watermark on all pages. For instance I'm trying to have a watermark on the first page only. Any way to do that? MacBook Pro 15, macOS 12.1 Posted on Mar 22, 2022 6:29 AM Reply Posted on Mar 22, 2022 7:02 AM Watermarks are section layout-based and will repeat for every page in the section. To isolate the watermark to one page, you place it on its own single-page section. See Add watermarks and background objects in Pages on Mac - Apple Support. I have a letterhead with a watermark that takes up about of the page. When I create a table to fill the page and it covers the watermark, the table's cells are white and wipe out the watermark completely. How can I make the table cells transparent so that I can see the table and the contents of the cell table, but still see the watermark showing through? 320 x 4 Fast, auto, watermark to keynote solution I have a very specific issue where I need to be able to add watermarks to Keynote, but with the ability to change the watermark for each person/version who will have access to the Keynote (that is, their name would appear on another different version). Is that even possible? (App or automatic functions) 1410 2 Logo watermark on photos? I found ways to add the "firm's name " with edit / ... markup/ text / ctrl+cmd+space (opens icons/emoji) ... Is there a way to add a logo.png (ex. , transparent background) on top of a picture? This feature would save me 1000s of work hours, specially when profile pictures dont need much retouch. For presentations, it is already integrated on Photos... (incl. instant album, great feature). 10903 4 Page content loaded Mar 22, 2022 7:02 AM in response to petros180 Watermarks are section layout-based and will repeat for every page in the section. To isolate the watermark to one page, you place it on its own single-page section. See Add watermarks and background objects in Pages on Mac - Apple Support. Applications and Services / Pages Hey guys. So I am in the process of having some test readers check out this book I have made. I'd say it's half illustrated, half text in a landscape/double column set up. While I do trust my test readers, I have put way too much work into this thing to not have a watermark or something to guard my work. Anyway, when going to insert my watermark, I inserted my image, I followed the instructions for "Arrange"->"Section Layout"->"Move object to Section Layout" however, the actual option for "Move object to section layout" is grayed out and I can't select it. To test I opened a blank document, put a few blank pages in there and tested it and it worked. So my main question is why can't I do it on my multi-page illustrated document? Is it because I didn't do it first thing so now all my illustrations, text boxes, etc. are interfering with me placing my watermark? Just looking for some possible solutions/answers. MacBook Pro 13, macOS 10.15 Posted on Oct 4, 2021 7:37 AM Reply Posted on Oct 5, 2021 7:34 AM Placing a watermark on a Pages document as a section master object behind the body text will not stop any bad actor from copy/pasting the body text from your Pages document into another document, when sharing the Pages document. It will not be a theft deterrent for those inclined to that purpose. When you export a Pages document with that watermark to a PDF, once again, one can copy/paste the text from the PDF into another word processing document because Pages PDF export does not set the Not Allowed Content Copying permission on the PDF. You can block PDF copying by visiting the Pages Print panel, click the PDF button, and select Save as PDF. On the panel that appears when you click Save as PDF, there is a Security Options button that leads to this screen, where you can set a password to open the PDF, but also a permissions password that blocks content manipulation and printing. When these permission passwords are set, no one can copy/paste your PDF content elsewhere, thus safeguarding your content from the bad actors. When a PDF so permitted is viewed in Adobe Acrobat Reader DC, the PDF properties now reflect, and when I open the PDF in Apple's Preview and attempt to select, and copy the content to the clipboard, I get the following, and similarly, any attempt to print, via menu, or keyboard shortcut is met by: Oct 5, 2021 7:44 AM in response to Ammaximus I addressed how to secure your document content in the PDF document format in my preceding post. I had no issue creating a section master (now called Section Layout in Pages v11.2) watermark, based on a rotated Text box, whose text wrap was set to None in the Arrange panel. I entered the word DRAFT set at 122 pt, and the Text box enlarged for the expanded text. I rotated the Text box by 45 degrees, and from the style panel, set the opacity at 15 percent. With the Text box selected, I chose Arrange menu > Section Layouts > Move Object to Section Layout. To perpetuate this Section Layout effect throughout your document, you visit the first page of each section, select the Document toolbar item, click its Section tab, and select Match previous section. With the Text box selected, I chose Arrange menu > Section Layouts > Move Object to Section Layout. To perpetuate this Section Layout effect throughout your document, you visit the first page of each section, select the Document toolbar item, click its Section tab, and select Match previous section. Looks like this: This thread has been closed by the system or the community team. You may vote for any posts you find helpful, or search the Community for additional answers. Apr 17, 2023 Watermarks play a critical role in marketing strategy. It helps companies ensure the market knows where a certain product or document came from. Adding a watermark can be not that simple, especially for beginners. Apple pages have their own way of putting watermarks, allowing you to generate and insert them conveniently. Hence, we provide steps below to guide you select the correct options and reaching your objectives. To put your watermark, you need to have the image or logo of your company or your chosen watermark on your file. After that, you will click the media button that is located above the document and add the image from your file. It also allows you to resize your image, so you can decide what size is best for your watermark. Click the image for the sidebar prompt: In the sidebar, you can see the arrange button; you will need to click it. After clicking it, you will see the text wrap bar, then select the option none. That way, the content will not be affected or re-arranged because of the image. In the option elsewhere, thus safeguarding your content from the bad actors. When a PDF so permitted is viewed in Adobe Acrobat Reader DC, the PDF properties now reflect, and when I open the PDF in Apple's Preview and attempt to select, and copy the content to the clipboard, I get the following, and similarly, any attempt to print, via menu, or keyboard shortcut is met by: Oct 5, 2021 7:44 AM in response to Ammaximus I addressed how to secure your document content in the PDF document format in my preceding post. I had no issue creating a section master (now called Section Layout in Pages v11.2) watermark, based on a rotated Text box, whose text wrap was set to None in the Arrange panel. I entered the word DRAFT set at 122 pt, and the Text box enlarged for the expanded text. I rotated the Text box by 45 degrees, and from the style panel, set the opacity at 15 percent. With the Text box selected, I chose Arrange menu > Section Layouts > Move Object to Section Layout. To perpetuate this Section Layout effect throughout your document, you visit the first page of each section, select the Document toolbar item, click its Section tab, and select Match previous section.
