

13.5K Even after years of updates and improvements, Play Store continues to be a hot mess on Android. Sometimes the app fails at completing setup; other times, users face something went wrong, try again error in the Google Play Store. In this article, we will discuss every possible method and fix the issue for you. The error message itself is telling you to do this! Sometimes, the Play Store just has a little hiccup maybe a tiny network stumble or a momentary brain fart on Googles end. Before you go digging into settings, just give it another shot. How to: Completely close the Google Play Store app. Dont just hit the home button; swipe it away from your recent apps or however you close apps fully on your phone. Reopen the Google Play Store app. If that annoying Try again button is still there, tap it. This forces the app to reconnect and try again. Before you go doing anything super drastic, its a good idea to guickly check if the problem might be with Google Play Store servers themselves. If theres a widespread outage, then no amount of tinkering on your phone is going to fix it until Google Play Status Dashboard: You can try checking status.play.google.com. Look for any red or yellow icons indicating problems. Third-Party Outage Trackers: Websites like Downdetector or IsDown are also really useful. Just search for Google Play Store isnt working, its a good sign its not just you. Check the comments too people often describe the exact problems theyre having. Specific Error Codes: If youre seeing a specific error code (like 944), a quick search online might tell you if its a known server issue. For example, error code 944 often points to Googles servers being temporarily down. Checking the server status can save you a lot of time and frustration by letting you know if you just need to sit tight and wait for Google to fix things. A slow internet connection might lead to something went wrong, try again error in the Google Play Store. Connect to 2.4GHz Wi-Fi frequency; instead, establish a successful connection with 5.0GHz frequency. You can also use apps like Speedtest and make sure that the internet speed is at least double-digit. Your phones operating system (Android) gets updates can also fix issues related to the Play Store or Google Play Services. If your phones software is old, it might have compatibility problems or unfixed bugs that are causing the Something went wrong error. How to Check: Go to Settings > System. Tap on System update. Your phone will check if there are any updates available. If it finds one, follow the on-screen instructions to download and install it. Keeping your phones software up-to-date is generally a good idea for overall stability and security, and it can sometimes fix those pesky Play Store issues, too. This is the golden rule for pretty much any tech problem. It clears out its temporary memory (RAM), closes all the apps running in the background, and reloads the operating system. This can often fix all sorts of minor software hiccups that might be messing with the Play Store. We have covered how to Power Off, Restart, and Force Restart iPhone and Android Phones. Turning Airplane Mode on and then off forces your phone to disconnect and then reconnect to cellular, Wi-Fi, and Bluetooth. This can sometimes clear out little glitches in your phones network stuff that just toggling Wi-Fi or data alone might miss. Heres How: Swipe down from the top of your screen to bring up your Quick Settings panel. Tap the Airplane mode icon (it usually looks like an airplane). Youll see it light up, and your Wi-Fi and cellular signals will disappear. Wait for about 10-15 seconds. Tap the Airplane mode icon again to turn it off. Wait for your phone to reconnect to your Wi-Fi and/or cellular network. You might not think your phone having the correct time to make secure connections. If your phones clock is way off, especially the time zone, it can cause problems with those secure connections and lead to the Something went wrong message. Heres How to Fix That: Head over to your phones Settings. Scroll down and tap on System. Tap on Date & time automatically (or Use network-provided time zone) are both turned on. If its already on, try turning both of them off, waiting a few seconds, and then turning the automatic settings and manually set the correct date, time, and especially your current time zone. But generally, keeping the automatic settings on is the best way to go. After youve checked or changed these settings, give it a minute or two for things to sync up, and then try the Play Store again. Heres how. Open the Settings app on your Android phone. Scroll down and tap on Accounts. Select the Google account and tap on Account sync. Tap on the three-dot menu at the top and select Sync now. Wait for a couple of minutes, and then open the Google Play Store again. If the manual sync didnt help, or if you suspect there might be a deeper issue with how your phone is talking to your Google account (like maybe some authentication stuff got messed up), then removing and then re-adding your Google account is the next step. This forces your phone to completely re-authenticate with Google account is the next step. This forces your count data. How to: Head to Settings > Accounts, Users & accounts). Tap on the Google account thats giving you trouble. You should see a Remove account button or tap on the three-dot menu. Youll probably get a warning just confirm that you want to remove it. This will sign you out of all Google apps and services on your phone with that account. Now, go back to the main Accounts settings page. Tap on + Add account. Choose Google from the list. Follow the steps to sign back into your Google account using your email and password. Give it some time to resync all your stuff (contacts, calendar, etc.). Once everything is back, try opening the Play Store. Note: Removing your main Google account will temporarily take away things like your contacts and calendar events from your phone if theyre only stored locally and havent been synced to Google servers yet. So, make sure your important data is backed up to Google before you do this. If youre using a Virtual Private Network (VPN) or a proxy server to route your internet traffic, it might sometimes interfere with your connection to the Google Play Store. This could be because the VPN or proxy server itself is having issues, or even just some weird configuration conflict. How to Disable it: Disable VPN: If you have a VPN app running, open it and disconnect. You can also usually go to Settings > Network & Internet> VPN. If you see an active VPN, tap the gear icon next to it and then tap Disconnect or Forget. Check for Proxy: Proxies are less common, but if youve set one up manually, it could be the problem. Go to Settings > Network & internet > Wi-Fi. Tap the gear icon next to your connected Wi-Fi network, tap Modify or Edit (it might be a little pencil icon), then tap Advanced options. Look for a Proxy setting. If its set to Manual, try changing it to None. After youve disabled any VPNs or proxies, try opening the Play Store again. Also, if you are using a VPN app, then try disabled any VPNs or proxies, try opening the Play Store icon and open the App info menu. Tap on Force Stop and completely stop all the Google Play Store services from the background. Reboot your Android phone and try accessing the Play Store collects cache data in the background. Reboot your Android phone and try accessing the Play Store services from the background. may lead to glitches resulting in something went wrong error in Google Play Store. Follow the steps below to clear cache in Google Play Store. Long-press on the Play Store icon and open the app info menu. Go to Storage & cache menu and tap on Clear cache from the following screen. When you open the Play Store again, you might experience a slow response as it will load apps and games from scratch. It doesnt have the cache data to speed up things, yet. Google Play Store and open the app info. Tap on the three-dot menu at the top. Select Uninstall updates, and the Android OS will revert the Play Store to the previous version. If you are still having issues with the Google Play Store on iPhone, you dont have any limitations on adding apps from other sources on Android. It can be difficult for some to find the latest APK files on the web. In that case, those users can find most apps on Galaxy users can find most apps on the phone Just remember that installing apps outside the official Play Store comes with some security risks, so you need to be extra cautious about where youre getting your apps from. If all the things didnt do the trick, its time for a slightly bigger reset: clearing the Play Stores data. It wipes out all the local data the Play Store app has stored, including your settings within the app (it wont remove your actual Google account from your phone), and any messed-up configuration files or databases that might be causing trouble. How to: Go to Settings > Apps (or Apps & notifications). Tap on See all apps. Find and tap on Google Play Store. Tap on Storage & cache. This time, tap on Clear storage (or it might say Clear data). Youll get a warning saying that all the apps data will be deleted. Go ahead and tap Delete or OK to confirm. Important things to keep in mind: This will reset any tweaks youve made within the Play Store app, like parental controls or how you approve purchases. Youll need to set those up again. Clearing the data for Google Play Services is a much bigger deal than just clearing its cache, and you should only try this if nothing else has worked. This resets the whole Google Play Services framework on your phone, wiping out all its stored data and settings. While it can fix some problems, it can also cause some temporary headaches. How to: Go to Settings > Apps (or Apps & notifications). Tap on See all apps. Find Google Play Services and tap on it. Tap on Storage & cache. Now, you might see a Manage space button. Tap whichever one you see. Then, look for an option like Clear all data and tap it. Note: You could lose things like saved passwords, transit passes or digital IDs in Google Wallet, and even have to sign back into your Google Play Store remains the de facto choice to download apps and games on Android phones. The Play Store showing something went wrong error might leave you with a scratching head. The tips above should help you troubleshooting If you cant open the Google Play Storetroubleshooting apps with basic troubleshooting steps. If you still cant use the Google Play Store after you try the steps above, try the steps below. After each step, try to use the app again to check if it fixed the problems with the Google Play StoreUninstall & reinstall Google Play Store updates To uninstall Google Play Store app updates: On your device's home or app screen, find the Google Play Store app. Touch and hold the Google Play Store app . Tap App info. At the top right, tap More Uninstall Google Play Store app updates: Open the Google Play Store app . At the top right, tap the Profile picture. Tap Settings About. Under Play Store version, tap Update Play Store. Remove & re-add your Google Play Store is the most common solution issues when you download apps from Google Play Store app like parental controls and password protection. It will ask you to reagree to the Terms of Service the next time you open the Google Play Store app. TapApp Info. Tap Storage & cache Clear Cache. Tap Clear storage Delete. If these steps resolve your issue, re-enable password protection and parental controls. If these steps didn't resolve your issue, try to clear cache and data from Google Play Services Important: Its not recommended to clear Google Play services unless youve tried all other troubleshooting options. When you clear Google Play services data or storage, it may delete some information may include passwords, transit cards, COVID cards, and virtual payment cards saved to Google Pay. You may also need to reauthenticate your payment methods on Google Pay and sign back into your Google Account on all devices. Open your devices Settings app. Tap Apps. Related resources Post to the help community Get answers from community members Have you ever faced such error. This error mainly comes when you are trying to add a new Google account on the device. So, to fix it, what should be the solution. To get to know, just visit How to Fix Couldnt sign in the error of Google Play Store discussion. Here, in the discussion, we will describe some probable solutions to fix the issue. By applying this, you should be able to solve the Couldnt sign in error in the Play Store? Check out the steps below to fix Google couldnt sign you in error on your mobile phone.Restart the SmartphoneClear Cache and Clear Data of the Google ServicesRemove and Add the Existing Google AccountDownload the latest Google Play Services with a .apk fileRestart the Smartphone:One of the easiest solutions to solve all the smartphone issues is restarting the mobile. It may not fix the issues all the time, but we never underestimate this solution. Sometimes, the device gets some load due to many apps running on it. Due to that, it invites such issues. So, at that time, to make feel the device free, the Restart trick will help us. Thats why this trick is useful in every issue of the mobile. To do so, Press and hold the Power Key of your smartphone. It brings a pop-up for you to display. It has options such as Power Off, Restart, Airplane Mode, and more. In which, select the Restartoption. The entire restarting process takes a while. Do not try to do anything while the restoring of the mobile is being done. You can use your handset when it comes back to normal mode. After restarting, try to sign in to your Google is being done. Account, the issue may be solved. If still, you are still running with the same issue, then may the next solution help you. Google Play Store is one of the data is regularly saved on your mobiles storage. This app is called app data. These data are also used to run the app smoothly. But, when the app data increases out of the limit, then it will start causing some issues. The bulk cached data or app data may be the reason behind this Cant Sign in issue. So, at that time, to solve it, you have to delete those app data. Here, we have to delete cached data from Google Play Services, Google Play Store, and other Google Services. You can do it by going into the Settings by launching the Menu. Then, go to the Apps or Application. Then, swipe the display from the right side to theleft side4 times, to go to the All tab. It shows you all the apps that you have on the mobile whether it is installed or pre-installed. Here, first of all, we will delete the cached data of Google Account Manager. So, by scrolling down the display, find the Google Account Manager. So, by scrolling down the display is what we are waiting for. On which, tap on two options, Clear Cache and Clear Data one by one. It will clear all the unwanted data which is causing the issue. Then, follow the same process for the below-listed options. Goto the Settings >> Apps >> All tab >> Google Play Store >> Clear Cache and Clear Data. Then, Go to the Settings >> Apps >> All tab >> Google Services Framework >> Clear Cache and Clear Data.In short, you have to delete the cached data of Four apps. These four apps. These four apps are Google Play Store, Google Play Services, and Google Services Framework. Then, again go to Settings >> Add Account >> Google. If the issue is solved, then go ahead for sign in. And, if not, then also go ahead with the next solution. After doing that, try to open the Play Store. It will surely fix the issue. Remove and Add the Existing Google Account: Here, in this solution, you just have to delete your current account. After that, you have to add the same account again. This is a trick that may solve this Google Store error.Launch the Menu.Go to the Settings >> Accounts.Then, you should see an accountlist that you have on your device at that time.Tap on the mail ID.Then, so the settings are set that time.Tap on the mail ID.Then, so the set that time.Tap on the mail ID.Then, on the mail ID Remove the account. Here, click on the option Remove Account. Again, it shows you a pop-up for your final confirmation. In which, choose the option of Remove Account. After removing the existing Google account, now its time to add the same. For that, Go to the Settings >> Add Account >> Add Account >> Google. After Checking Info, it shows a display withtwo options. The first option is toEnter your email, and the second is to Create a new account. But, here we are not for creating a new account. On the next display, you should get an agreement to the Privacy Policy and Terms of Service. To move forward, click on the Accept button at the bottomright corner of the screen. Then, the system will take a while to verify the account that you have entered. If you want to make a backup of all the data, then the next screen is for you. On which, tick the box to allow the system for a backup. Once again, at the right bottom corner, tap on the Next button for the last time. But, as we have mentioned in 2nd step on exactly the above steps. If you did not get that screen, then this fix is nothing for you. But, at least do not forget to apply it, because sometimes it works. If it does not work, then you must forward the latest and new smartphones, all Google Play Services come as pre-installed services. It means you do not have to install it after buying a new Android handset. But sometimes, the older version of the Google Play Services may invite such errors while trying to sign in. So, at that time, you will have to look forward to a new version of Google Play Services. To download it, you will have to get help from the APK file of Google Services. As we know it is an APK file from an unknown source, so you have to enable one option. This option is for Unknown Sources. By allowing the system can allow the installation of apps from unknown sources. To allow it, Go to the Settings >> Security. Here, under the tag of Device Administration, you can see the Unknown Sources. By allowing the system can allow the installation of apps from unknown sources. make it enable.Now,Open the Google Chrome Browser. You are also free to open other Web Browsers. In the search panel, enter the website name apkmirror.com or any similar Android app download the APK file of Google Play Services. Here, on the main page, again find the APK of your desired search. For that, enter the name by tapping on the sign of the magnifying glass. It will show you lots of results for whatever you have searched. From here, choose the version of Google Play Services as per the OS on which your device is running. After that, tap on the download option to download it. Then, install it on your mobile. Now, try to sign in to the Google Account. It surely gives you the solution for the issue that you have faced. Here, we are at the end of the discussion on How to Fix Couldnt Sign in error in Google Store. We hope that this entire discussion will help you when you are facing such problems. If you are satisfied with the procedure, then dont forget to share it with other users. Check out the below video published on YouTube to fix to sign error on the Google Play Store. Click on the data and cache on both the Clear Data and Clear Cache buttons. Youre trying to download a game or app from the Google Play Store, and youre greeted by error code 194. In theory, this shouldnt be happening anymore if your device is running the up-to-date Google Play Store APK. Nonetheless, error 194 is easy to fix. Just like error RH-01, you can make error code 194 go away by clearing your devices data and cache. The process is almost the same. Go to Settings > Apps > Google Play Store and press the Clear Data and Clear Cache buttons. See error code RH-1 for visual aid. If this doesnt work, repeat the same process for Google Play Services and clear both data and cache. Error code 194 should be gone. Play Store error code 24 usually pops up when there are too many background apps generating Google Play Store app errors. However, you can also get this error when your phones storage is full. Clear the cache and data See the solution for Google Play Store error code RH-01 for the steps you need to take. If clearing the cache and data didnt help, check your SD card. 1. Open the Settings app. 2. Select Device maintenance. 3. The maintenance panel will show you the status of your phone, including details about storage. It will also give you an Optimize Now option that you can use to clean unnecessary data thats taking up space. 4. If automatic optimization doesnt do the trick, go to Storage space. 6. If youve already done that and it didnt help, start deleting files manually. Look in the Images and Videos section, particularly if you frequently take photos or film. You might also have many pictures and videos others shared with you through Whatsapp. This error has been around for years, and troubleshooting it can be tricky. In most cases, error code 18 pops up when you reinstall an application. Heres what you can try to fix it. This might sound strange, but one of the most effective solutions is to remove the SD card from your phone off completely. 2. Remove the SD card from its slot and wait 30 seconds. 3. Plug the SD card back in and restart your phone. If this doesnt work, reinstall the app on your phones native storage after removing the SD card. Afterward, reconnect the SD card. If the above solution doesnt work, your Android device might need a factory reset. 1. Go to Settings and select General management. 2. Select the Reset option. 3. Select Factory data reset. 4. Click on the Reset button. Keep in mind this option will restore your Android device to factory settings, which means you will lose your data and downloaded apps. Keep in mind these steps might be slightly different on older or more recent versions of Android. This Google Play Store error tells you that you cant install a specific app. It can also occur when youre trying to update or uninstall an app, but it can also be caused by corrupted data or a buggy Google account. Heres what you can try to fix it. Clear the Google Play Store cache and data. Check the solution for error code RH-01 for all the troubleshooting steps you need to take. If clearing your cache doesnt help, you should remove and re-add your Google account to your Android device. That should fix the error. But before you follow the guide below, you should first try to simply log out of your Google account and log back in. Some users report that a plain relog gets rid of error code 910. That said, heres how to remove your Google account and re-link it to your device. 1. Open Settings and select Cloud and Accounts from the menu. Depending on your device and Android version, this option might be called Backup and Accounts or just Accounts or accounts. 4. A list with your synced Google accounts will open on the next screen. Select your Account. 5. On the next menu, tap on the three dots button at the top right corner of your screen and choose the Remove Account option. 6. Go back to the Accounts menu and, this time, select the Add account option from the list. 7. Select Google and begin the account setup process with your credentials. Alternatively, you can try setting up an entirely new Google account. If you encounter error code 103, the app you downloaded is not compatible software, but it happens. In most cases, to fix this Google Play Store error, you just need to update your Android OS to the latest version. Open the Settings menu, and youll see a Software update notification, you can also scroll down and click on the Software update button. Let your device scan for updates and follow the onscreen instructions. Since its nearly impossible to cover all the Google Play errors, below youll find some troubleshooting steps you can follow the instructions. Since its nearly impossible to cover all the Google Play errors, below youll find some troubleshooting steps you can follow the instructions. before powering it back on. For some strange reason, turning Airplane Mode (or Flight Mode) on and then off fixes several Google Play Store errors. As a bonus, if your phone has wi-fi connection issues, this can fix them. You can find the Airplane Mode feature from the phones notification bar. Drag your finger down from the top of your screen, and youll see several buttons, including the airplane mode one that looks like a plane. Press the button to enable it, wait a few seconds, then press it again to disable it. In the same notifications panel where you find Wi-Fi. Toggling it can solve various Google Play errors, so its worth giving it a shot. Switch it off, wait 30 seconds, and switch it back on. SD cards can cause a lot of errors, including numerous Play Store issues. Remove the card and see if you still get the error code pops back up. If it does, you might have to replace your SD card. This is another solution that solves many issues. Weve already mentioned this fix for some of the error codes we discussed earlier, but to recap, always try to clear the cache and data for Google Play Store and Coogle Play Store and Google Play Store and Go date. Perform a system update regularly and dont ignore any update notifications in the future. Many Google Play Store errors can be fixed with software updates. If everything else has failed so far, its time to reset your Android device to its factory settings. Remember to save any critical data because everything will be wiped.
