Highest-ranking officer of an organization "Chief executive" and "CEO" redirect here. For other uses, see Chief executive (disambiguation) and CEO (disambiguation). A group of Fortune 500 CEOs in 2015 A chief executive officer (CEO),[1] also known as a chief executive or managing director, is the top-ranking corporate officer charged with the management of an organization, usually a company or a nonprofit organization. CEOs find roles in various organizations, including public and private corporations, nonprofit organizations, and even some government organizations (notably state-owned enterprises). The governor and CEO of a corporation or company typically reports to the board of directors and is charged with maximizing the value of the business.[1] which may include maximizing the profitability, market share, revenue, or another financial metric. In the nonprofit and government sector, CEOs typically aim at achieving outcomes related to the organization's mission, usually provided by legislation. CEOs are also frequently assigned the role of the main manager of the organization and the highest-ranking officer in the C-suite.[2] The term "chief executive officer" is attested as early as 1792, when an ordinance of the Confederation of the United States of America used the word "CEO" to refer to governors and other leaders of the executive branches of each of the Thirteen Colonies.[3] In draft additions to the Oxford English Dictionary published online in 2011, the Dictionary says that the use of "CEO" as an acronym for a chief executive officer originated in Australia, with the first attestation being in 1914. The first American usage cited is from 1972.[4] The responsibilities of an organization's CEO are set by the organization's board of directors or other authority, depending on the organization's structure. They can be far-reaching or quite limited, and are typically enshrined in a formal delegation of authority regarding business administration. Typically, responsibilities include being an active decision-maker on business strategy and other key policy issues, as well as leader, manager, and executor roles. The communicator role can involve speaking to the press and the public, as well as to the organization's management and employees. The decision-making role entails making high-level decisions regarding policy and strategy. The CEO is responsible for implementing the goals, targets, and strategic objectives as determined by the board of directors. As an executive officer of the company, the CEO reports the status of the business to the board of directors, motivates employees, and drives change within the organization. As a manager, the CEO presides over the organization's day-to-day operations.[5][6][7] The CEO is the person who is ultimately accountable for a company's business decisions, including those in operations, marketing, business development, finance, human resources, etc. The CEO of a political party is often entrusted with fundraising, particularly for election campaigns. The use of the CEO title may be used by for-profit companies or non-profit or charitable organisations, such as the Wikimedia Foundation. In some countries, there is a dual board system with two separate boards, one executive board for the day-to-day business and one supervisory board for control purposes (selected by the shareholders). In these countries, the CEO presides over the executive board and the chairperson presides over the supervisory board, and these two roles will always be held by different people. This ensures a distinction between management by the executive board and governance by the supervisory board. This allows for clear lines of authority. The aim is to prevent a conflict of interest and too much power being concentrated in the hands of one person. In the United States, the board of directors (elected by the shareholders) is often equivalent to the supervisory board, while the executive board may often be known as the executive committee (the division/subsidiary heads and C-level officers that report directly to the CEO). In the United States, and in business, the executive officers are usually the top officers of a corporation, the chief executive officer (CEO) being the best-known type. The definition varies; for instance, the California Corporate Disclosure Act defines "executive officers" as the five most highly compensated officers not also sitting on the board of directors. In the case of a sole proprietorship, an executive officer is the sole proprietor. In the case of a partnership, an executive officer is a managing partner, senior partner, or administrative partner. In the case of a limited liability company, an executive officer is any member, manager, or officer. Main article: Corporate title Depending on the organization, a CEO may have several subordinate executives to help run the day-to-day administration of the company, each of whom has specific functional responsibilities referred to as senior executives.[8] executive officers or corporate officers. Subordinate executives are given different titles in different organizations, but one common category of subordinate executive, if the CEO is also the president, is the vice president (VP). An organization may have more than one vice president, each tasked with a different area of responsibility (e.g., VP of finance, VP of human resources). Examples of subordinate executive officers who typically report to the CEO include the chief operating officer (COO), chief financial officer (CFO), chief strategy officer (CSO), chief marketing officer (CMO) and chief business officer (CBO). The public relations-focused position of chief reputation officer is sometimes included as one such subordinate executive officer; but, as suggested by Anthony Johnrow, CEO of Reputation Economy Advisors, it can also be seen as "simply another way to add emphasis to the role of a modern-day CEO – where they are both the external face of, and the driving force behind, an organization culture".[9] Brad D. Smith, former CEO of GitHub In the US, the term "chief executive officer" is used primarily in business, whereas the term "executive director" is used primarily in the not-for-profit sector.[10] These terms are generally mutually exclusive and refer to distinct legal duties and responsibilities.[11] The CEO is the highest-ranking executive in a company, making corporate decisions, managing operations, allocating resources, and serving as the main point of communication between the board of directors and the company.[12] In the UK, chief executive and chief executive officer are used in local government, where their position in law is described as the "head of paid service".[13] and in business and in the charitable sector.[14] As of 2013[update], the use of the term director for senior charity staff is deprecated to avoid confusion with the legal duties and responsibilities associated with being a charity director or trustee, which are normally non-executive (unpaid) roles. The term managing director is often used in lieu of chief executive officer. Business publicists since the days of Edward Bernays (1891–1995) and his client John D. Rockefeller (1839–1937) and even more successfully the corporate publicists for Henry Ford, promoted the concept of the "celebrity CEO". Business journalists have often adopted this approach, which assumes that the corporate achievements, especially in the arena of manufacturing, are produced by uniquely talented individuals, especially the "heroic CEO". In effect, journalists celebrate a CEO who takes distinctive strategic actions. The model is the celebrity in entertainment, sports, and politics – compare the "great man theory". Guthey et al. argues that "...these individuals are not self-made, but rather are created by a process of widespread media exposure to the point that their actions, personalities, and even private lives function symbolically to represent significant dynamics and tensions prevalent in the contemporary business atmosphere"[15] Journalism thereby exaggerates the importance of the CEO and tends to neglect harder-to-describe broader corporate factors. There is little attention to the intricately organized technical bureaucracy that actually does the work. Hubris sets in when the CEO internalizes the celebrity and becomes excessively self-confident in making complex decisions. There may be an emphasis on the sort of decisions that attract the celebrity journalists.[16] Reserch published in 2009 by Ulrikke Malmendier and Geoffrey Tate indicates that "firms with award-winning CEOs subsequently underperform, in terms both of stock and of operating performance".[17] Main article: Executive compensation § Controversy Executive compensation has been a source of criticism following a dramatic rise in pay relative to the average worker's wage. For example, the relative pay was 20-to-1 in 1965 in the US, but had risen to 376-to-1 by 2000.[18] The relative pay differs around the world, and, in some smaller countries, is still around 20-to-1.[19] Observers differ as to whether the rise is due to competition for talent or due to lack of control by compensation committees.[20] In recent years, investors have demanded more say over executive pay.[21] Main article: Gender diversity § In the boardroom Lack of diversity amongst chief executives has also been a source of criticism.[22] In 2018, 5% of Fortune 500 CEOs were women.[23] In 2023 the number rose to 10.4% of for Women CEOs of Fortune 500 companies.[24] The reasons for this are explained or justified in various ways, and may include biological sex differences, male and female differences in Big Five personality traits and temperament, sex differences in psychology and interests, maternity and career breaks, hypergamy, phallogocentrism, the existence of old boy networks, tradition, and the lack of female role models in that regard.[25][26][27] Some countries have passed laws mandating boardroom gender quotas.[28] In 2023 Rockefeller Foundation awarded a grant to Korn Ferry to research strategies and then action a plan to help more women to become CEO's.[29] See also: Toxic leader There are contentious claims that a significant number of CEO's have psychopathic tendencies, often characterized by power-seeking behavior and dominance. These individuals can often conceal their ruthlessness and antisocial behavior behind a facade of charm and eloquence. Traits such as courage and risk-taking, generally considered desirable, are often found alongside these psychopathic tendencies. Tara Swart, a neuroscientist at MIT Sloan School of Management, has suggested that individuals with psychopathic traits thrive in chaotic environments and are aware that others do not. As a result, they may intentionally create chaos in the workplace.[30][31] This perspective is explored in the book Snakes in Suits, co-authored by Robert D. Hare. However, Scott Lilienfeld has argued that the attention given to psychopathy in the workplace by both the media and scholars has far exceeded the available scientific evidence. Emilia Bunea, writing in Psychology Today, has linked psychopathic traits in managers to workplace bullying, employee dissatisfaction, and turnover intentions. Despite this, Bunea cautions that excessive worry about supposed psychopathic managers could discourage individuals from pursuing careers in corporations and deter employees from addressing issues with difficult bosses.[32] CEO succession CEO of public schools City manager Executive officer Founder mode Glass cliff List of books written by CEOs List of chief executive officers Occupational Information Network Prime minister United States Department of Labor ^ a b Lin, Tom C. These machines are designed to be efficient and reliable, but like all complex equipment, they can sometimes experience errors or malfunctions. When this happens, it's important to be able to identify and troubleshoot the problem in order to keep your operations running smoothly. In this article, we'll take a closer look at some common Ecolab dishwasher error codes and what you can do to resolve them. Ecolab dishwashers are equipped with a sophisticated control panel that can display a variety of error codes when something goes wrong. These codes can help you identify the nature of the problem and take appropriate action to fix it. Some of the most common error codes that you may encounter include: E1: This error code indicates a problem with the dishwasher's water supply. It could mean that the water inlet valve is clogged or malfunctioning, the water pressure is too low, or there is a problem with the water supply line. E2: This code indicates an issue with the dishwasher's drain system. It could mean that the drain hose is clogged, the drain pump is malfunctioning, or there is a problem with the drain line. E3: This error code indicates a problem with the dishwasher's heating element. It could mean that the element is burned out, or there is an issue with the wiring or control board. E4: This code indicates a problem with the dishwasher's wash motor. It could mean that the motor is malfunctioning, the impeller is damaged, or there is an issue with the motor control board. E5: This error code indicates a problem with the dishwasher's temperature sensor. It could mean that the sensor is faulty or there is an issue with the wiring or control board. E6: This code indicates a problem with the dishwasher's float switch. It could mean that the switch is stuck, damaged, or there is an issue with the wiring or control board. E7: This error code indicates a problem with the dishwasher's water level sensor. It could mean that the sensor is faulty or there is an issue with the wiring or control board. E8: This code indicates a problem with the dishwasher's detergent dispenser. It could mean that the dispenser is clogged, damaged, or there is an issue with the wiring or control board. When you encounter an error code on your Ecolab dishwasher, there are a few steps you can take to troubleshoot the problem and resolve the issue. Step 1: Turn off the power to the dishwasher. Before you begin troubleshooting, make sure that the dishwasher is powered off and unplugged from the electrical outlet. Step 2: Check the dishwasher's user manual. Most Ecolab dishwashers come with a user manual that contains troubleshooting instructions and error code explanations. Refer to this manual to see if there are any specific steps you need to take to resolve the error code. Step 3: Check the water supply and drain lines. If the error code indicates a problem with the water supply or drain system, check the supply and drain lines for any clogs or damage. If necessary, clean or replace the lines to ensure proper water flow. Step 4: Check the dishwasher's filters. Ecolab dishwashers are equipped with filters that help to trap food particles and debris. If these filters become clogged, they can cause issues with the dishwasher's performance. Check the filters and clean or replace them as needed. Step 5: Check the dishwasher's heating element. If the error code indicates a problem with the dishwasher's heating element, check to see if the element is burned out or damaged. You can test the element with a multimeter to see if it's working properly. If the element needs to be replaced, follow the instructions in the user manual to do so. Step 6: Check the dishwasher's motor. If the error code indicates a problem with the dishwasher's wash motor, check to see if the motor is functioning properly. You can test the motor with a multimeter to see if it's receiving power. If the motor is not working, you may need to replace it. Step 7: Check the dishwasher's sensors and switches. If the error code indicates a problem with the dishwasher's sensors or switches, check to see if they are functioning properly. You can test these components with a multimeter to see if they are working correctly. If they are not, you may need to replace them.
