Developmental psychology is the study of how humans grow, change, and adapt across the course of their lives. intellectual development from the prenatal stage through infancy, childhood, adolescence, and adulthood. This article covers developmental psychology, including the definition, types, life stages, and how to seek treatment when necessary. seksan Mongkhonkhamsao / Getty Images According to the American Psychological Association (APA), developmental psychology is a branch of psychology that focuses on how human beings grow, change, adapt, and mature across various life stages. Developmental psychology. In each of the life stages of developmental psychology, people generally meet certain physical, emotional, and social milestones. These are the major life stages, according to developmental psychologists: Prenatal developmental psychologists are interested in diagnoses, such as Down syndrome, that might be noticed during the prenatal (before birth) stage. They also investigate how maternal behaviors (behaviors of the pregnant parent), such as nutrition and drug use, could affect the developing fetus. Early childhood: Developmental psychologists are interested in a child's attachment to their parents and other caregivers. Middle childhood: In this stage, children learn about the world and acquire knowledge through experimentation, questioning, and observation. They begin to develop ment and identity formation. Teens and young adults might experiment with various identities, career choices, or areas of interest. Early adulthood: During early adulthood, most people are focused on preparing for the rest of their lives through a focus on education, career, and financial independence. Romantic relationships, marriage, family-building, setting down "roots," and child-rearing are often a focus of this life stage. Middle adulthood: Middle-aged adults are often focused on helping the next generation, whether in their own family or their community. They are also often interested in the legacy they'll leave behind. Older adulthood: In addition to physical health challenges, older people might face issues like dementia or cognitive behind. decline (decline in thinking, remembering, and reasoning). Older adults also often need to reflect on their lives, tell their stories, and find meaning and peace within the aging process. During its early development as a branch of psychology in the late 19th and early 20th centuries, developmental psychology focused on infant and child development. As the field grew, so did its focus. Today, developmental psychologists focus on all stages of the human lifespan. As developmental psychology grew over time, various researchers proposed theories about how to understand the process of human developmental psychology grew over time, various researchers proposed theories about how to understand the process of human developmental psychology grew over time, various researchers proposed theories about how to understand the process of human developmental psychology grew over time, various researchers proposed theories about how to understand the process of human developmental psychology grew over time, various researchers proposed theories about how to understand the process of human developmental psychology grew over time, various researchers proposed theories about how to understand the process of human developmental psychology grew over time, various researchers proposed theories about how to understand the process of human developmental psychology grew over time, various researchers proposed theories about how to understand the process of human developmental psychology grew over time, various researchers proposed theories about how to understand the process of human developmental psychology grew over time, various researchers proposed theories about how to understand the process of human developmental psychology grew over time, various researchers proposed theories about how to understand the process of human developmental psychology grew over time, various researchers proposed theories about how to understand the process of human developmental psychology grew over time, various researchers provide theories about how to understand the process of human developmental psychology grew over time, various researchers provide theories about how to understand the process of human developmental psychology grew over time, various researchers psychology grew over time, various researchers psychology grew over time, various researchers psychology grew over time, various rese or approach within the field. These are a few of the major branches of developmental psychology. Building on Austrian neurologist Erik Erikson proposed a lifespan theory that included eight stages of psychosexual development. Each of the stages of psychosexual development. corresponds to both an age range and a core "crisis" (such as trust vs. mistrust in infancy) that must be resolved before someone can move on to the next. Swiss psychologist Jean Piaget's theory of cognitive development focuses on how children and youth gradually become able to think logically and scientifically. Piaget proposed that cognition develops through four distinct stages of intellectual development, beginning at birth and ending at age 12. Attachment theory, originally developed by psychoanalyst John Bowlby, establish such a connection, or if they experience parental separation or loss, they might continue to struggle with healthy attachments as they get older. While Bowlby considered the importance of the immediate family in child development, psychologist Lev Vygotsky's sociocultural theory looks at the role of society. Cultural influences and beliefs can have a profound impact on how a person views their own identity and relates to others. Developmental psychologists can help people address developmental issues in order to reach their full potential. Some of the conditions a developmental psychologist might treat include: Learning disabilities Intellectual disabilities Developmental delays Motor skill delays Issues with social and emotional development Auditory processing (hearing) disorder Autism spectrum disorder (ASD) Speech and language delays Dementia Mental health conditions like anxiety and depression, especially related to life stages The training required to become a developmental psychologist is similar to that in other subfields of psychology. Most developmental psychologists start with an undergraduate degree in psychology or a related field, followed by a master's degree and a doctoral degree (PhD). There are many master's degree and a doctoral degree (PhD). adolescent development. In addition to research and teaching, graduates may participate in a practicum or internship to pursue licensing as a therapist. If you're concerned that your child is facing a developmental psychologist can assess them to ensure that they are meeting their milestones. It's best to seek an assessment diagnosis, and treatment early, so intervention can begin as soon as possible. Examples of when to see a developmental psychologist may include: An infant is struggling to bond with their parents. A toddler is missing milestones, such as walking or developmental psychologist may include: An infant is struggling to bond with their parents. A toddler is missing milestones, such as walking or developmental psychologist may include: An infant is struggling to bond with their parents. A toddler is missing milestones, such as walking or developmental psychologist may include: An infant is struggling to bond with their parents. adolescent is facing challenges related to social and/or emotional development. A developmental psychologist might perform physical therapist (helps people improve movement and manage pain) Occupational therapist (helps people adjust to everyday activities after injury, illness, or disability) Speech-language pathologist (treats speech, language, and social and cognitive communication) Psychotherapist (uses talk therapy to treat mental health conditions) Neurologist (medical doctor who treats disorders of the brain, spinal cord, and nerves) Psychiatrist (medical doctor specializing in mental health conditions) A developmental psychologist will also likely ask you and your child questions about issues in areas of their life such as friends, behavior, or school performance. In addition to working with infants and children, developmental psychologists can also help people at any stage of life. In particular, many older adults benefit from working with a developmental psychologist if they're experiencing symptoms of dementia, ill health, or cognitive decline.
Developmental psychologists focus on the intellectual, social, emotional, and physical development of infants, children, and adolescents. Others treat and assess people of all ages. Developmental psychologists can treat issues such as developmental delays, motor skill delays, dementia, anxiety, depression, auditory processing disorder, autism spectrum disorder, and more. They also make referrals to other specialists, such as physical therapists, psychiatrists, and speech-language pathologists. Discover ten classic developmental psychology experiments that study how children's self, memory, language, learning and more emerge. Once upon a time, although it seems barely credible to us now, we were all children. We gurgled, we fell down, and we had very little idea about the journey on which we had just embarked. Barring mishap, over the first few years of our lives we developed memory, language, self-concept, cognitive, social and emotional abilities. We took our first steps towards our future selves. Child psychology — or, more broadly, developmental psychology — is not just the study of you and me and how we came to be this way. Just as discovering your history can teach you about the future, so developmental psychology studies that we once were and even what we will become. Here are 10 classic developmental psychology studies that is ourselves, and each one reminds us, through examining just one piece, how aspects of experience we now take for granted were once so complex. Click the links for a more extensive description of each developmental psychology experiment. 1. Infant memory develops very early on Some argue it's impossible for us to remember anything much from before around two to four years of age. Others think our memories can go way back perhaps even to before birth. The question of infant memory is thorny because it's hard to test whether adults' earliest memories are real or imagined. What psychologists have done, though, is examine the emergence of memory in our first few years with a series of now classic experiments in developmental psychology. These have found that our memory systems actually work quite well from very early on. Infants' memories also seems to work in much the same way as adult memories are much more fragile. Developmental psychology: when the self emerges to this day the 'mirror test' remains the best developmental psychology: when the self emerges are much more fragile. examining the emergence of self-concept in infants using the mirror test. Most people look out for number one, themselves, which makes it strange to think that there was ever a time when we had no concept of 'me'. A simple study dating from the early 70s suggests that before the age of around two years old we can't recognise ourselves in the mirror. Because of this study, and the many variations in developmental psychology that have followed, some claim that it isn't until our self-concept emerges. 3. How children learnA classic study of childhood learning suggests true understanding comes from letting go of established preconceptions. How children revise their understanding of the world is one of the most fascinating areas of developmental psychology. But it is not just relevant to children; we all have to take on new concepts from time-to-time - even though they may not be as profound as the origin of the species. It's tempting to think that learning is largely about memory - especially since in the bad old days of education learning was largely accomplished by rote. However, the idea of 'mental models' suggests children create, and then test, mental models of the way the world works in order to build up our understanding, and that is how children learn.4. Attachment styles in developmental psychologyAttachment styles analyse how people respond to threats and problems in their personal relationships. People who find relationships difficult often become unable to participate in the ordinary give-and-take of everyday life. These difficulties sometimes have their roots in the most important early relationships, evidenced in attachment styles. It's no wonder that developmental psychologists are so interested in the first relationships we build with our primary caregivers. These attachment styles are likely to prove a vital influence on all our future relationships, including those with our spouse, our workmates and our own children. While you can't blame everything on your parents, early relationship attachment styles are like a template that we take forward with us in life.5. Infants imitate others when only weeks oldOne of the most basic forms of social behaviour is copying another person. Although imitation is something we adults take forward with us in life.5. granted, it's actually a pretty demanding process for a young infant. At the heart of imitation is understanding the difference between yourself and others – something that famous Swiss child psychologist Jean Piaget thought didn't emerge immediately in infants. Consequently, he argued that infants could not imitate others until they were 8 to 12 are thinking we would be lost in the social world. The emergence of theory of mind is a central componental milestone; some psychologists think that a failure to developmental milestone; some psychologists think that a failure to develop a theory of mind is a central component of autism. emerge in young children that are vital for their successful functioning in society. They begin to understand that others can lie, and that others can lie to them — they have a theory of mind. 7. Object permanence in developmental psychology is understanding that things continue to exist, even if you cannot seem them. Research in developmental psychology has found that infants as young as 3.5 months seem to have a basic grasp of object permanence. It appears that young infants are not necessarily trapped in a world of shapes which have little meaning for them. Instead, they seem to be intuitive physicists who can carry out rudimentary reasoning about physical concepts like gravity, inertia and object permanence.8. How infant's very first step is discriminating and categorising the basic sound components of the language they are hearing. To get an idea how hard this might be think about listening to someone speaking a language you don't understand. Foreign language you don't understand. Foreign language you don't understand. Foreign language they are hearing. To get an idea how hard this might be think about listening to someone speaking a language you don't understand. Foreign language you don that until about 11 months of age infants are masters of discriminating phonemes used in all different types of languages. But after 11 months infants settle down with one set of phonemes for their first language, and lose the ability to discriminate the phonemes from other languages. Play and developmental psychology The pioneering developmental psychologist Lev Vygotsky thought that, in the preschool years, play is the leading source of development. Through play children learn and practice many basic social skills. They develop a sense of self, learn to interact with other children, how to make friends, how to lie and how to role-play. The classic developmental psychology study of how play develops in children was carried out by Mildred Parten in the late 1920s at the Institute of Child Development in Minnesota (Parten, 1933). She closely observed children between the ages of 2 and 5 years and categorised the types of play. She found six different types of play, ranging from solitary, through associative to cooperative10. Piaget's developmental psychology theoryJean Piaget was a developmental psychologist whose four-stage theory, published in 1936, has proved extremely influential. Piaget's four stages of development theory has the dubious claim to fame of being one of the most criticised psychological theories ever. From the sensorimotor stage, through the pre-operational stage, the concrete operational stage and the formal operational stage, his theory attempts to describe how childhood development progresses. However, Piaget's experiments and theories about them here.. Does climbing the corporate ladder sound like the exhilarating challenge of a lifetime? The term was first used in the magazine New Scientist in 1994, after its humorous Feedback column mentioned a book on polar explorations by Daniel Snowman and an article on urology by researchers named Splatt and Weedon. The hypothesis had been suggested by psychologist Carl Jung, citing as an example Sigmund Freud (German for 'joy'), who studied pleasure. A few recent empirical studies have indicated that certain professions are disproportionately represented by people with appropriate surnames, though the methods of these studies have been challenged. One explanation for nominative determinism is the theory of implicit egotism which states that humans have an unconscious preference for things they associate with themselves. An alternative explanation is genetic: an ancestor might have been named Smith or Taylor according to their occupation, and the genes they passed down might correlate to aptitudes for those professions. The male is crimson on the head, nape, and underparts, with a black throat and grey chest; the rest of its upperparts are cinnamon-coloured. The female is similarly patterned, but cinnamon-brown where the male is scarlet. The species is primarily an insectivore, but also eats various plant materials, including fruits and seeds. Other than the timing of its breeding, typically between April and June, little is known about its breeding biology. It is classified as a near-threatened species, with population numbers thought to be declining and habitat loss a key threat. This male Whitehead's trogon was photographed perching on a branch near Mount Kinabalu in the Malaysian state of Sabah. Retrieved from " 32009 Argentine TV series or program 6, 7, 8First logoAlso known as The Critique to Real PowerGenreArchive television programPresented by Orlando Barone Carlos Barragán Jorge Dorio Cynthia García Eduardo Massa Alcántara Mariana Moyano Dante Palma Sandra Russo Nora Veiras Country of originArgentinaOriginal releaseNetworkTelevisión Pública ArgentinaReleaseMarch 9 2009 (2009-03-09) -23 December 2015 (2015-12-23) Six in the Seven at Eight, usually called 6, 7, 8, was an Argentine political commentary TV program broadcast by the government-run Channel 7 since 2009. Its name comes from the fact that, when it first started airing, there were five members on the show's panel, and its motto was you are the sixth one (the viewer). Since it was broadcast by Channel 7 at 8 p.m., the name was shortened to "6, 7, 8". In late 2009, the program was moved to 9 p.m., a new segment was added to be aired on Sundays at night, and new guest panelists were invited, making it more than six members.[1] Nevertheless, the show's name remained unchanged. It was first hosted by María Julia Oliván and a panel which included Orlando Barone, Carla Czudnowsky, Eduardo Cabito Massa Alcántara, Luciano Galende and Sandra Russo, along with a guest analyst who would give their opinions throughout the program. María Julia Oliván announced in an interview for web site Television.com.ar that, on January 28, 2010, should make her last appearance on the program. [2] Her place was occupied by Luciano Galende, and from 2013 onward the host has been Carlos Barragán. The program was nominated to the 2010 Martín Fierro Awards in the category Best Journalistic Program. The program was nominated to the 2010 Martín Fierro Awards in the category Best Journalistic Program. social and political repercussions on Argentina. The program has come under criticism due to its perceived advocacy of Kirchnerism, which is controversial since it is aired by a state-owned TV channel during the time when Cristina Kirchner. 6, 7, 8 was first aired on March 9, 2009. The initial name was "6 in the 7 at 8", making reference to the 6 people in the program, the channel 7, and that the program, the channel 7, and that the program was broadcast at 8:00 pm. Although the number of people and the timeslot changed over time, the name "678" was kept. It is an Archive television program focused on politics and journalism. It was created during the campaign for the 2009 midterm elections, in order to broadcast the Kirchnerite propaganda known as Relato K, and to attack the opposing candidates. It received a privileged timeslot on Sundays, right after the broadcasting of the Fútbol para todos weekly matches Once the elections were over, it continued to voice the Kirchnerism and the media.[3] Mauricio Macri, president of Argentina since December 10, 2015, appointed Hernán Lombardi as the new manager for Channel 7. Soon thereafter it was announced that the channel would not air 6, 7, 8 because the production company decided not to renew the contract with the TV Pública.[4][5] According to Clarín newspaper the program uses archive footage to criticize Mass Media outlets, judges and political opponents to the national government.[6] On October 13, 2009 the program aired a video that had circulated in blogs. The anonymous video was recorded through a hidden camera, and it shows the journalist and columnist of newspaper La Nación, Carlos Pagni, in an alleged operation to publish false information for the purpose of damaging the oil company Repsol YPF. The broadcast of the video was criticized by the Partido Solidario deputy Carlos Heller who was a guest on the program that day, expressing his objection to the publication of anonymous films. The contents of the video were criticized by the panelists after it was shown. According to an article in La Nación that was published the next day about the segment, "the presentation of the hidden camera, and the images of the hidden camera (cut, but carefully and professionally edited) do not, at any moment, show the columnist in situations that could corroborate the serious and injurious charges about corruption that are made in the video, there are appearances by other people who may represent Pagni, receiving money in return for newspaper articles. However, after the airing on October 13, Pagni received the support of the Argentine Journalism Forum (Foro del Periodismo Argentino) and other journalists.[8] YPF issued a complaint to investigate who recorded the video, and the veracity of the facts that are seen on it. They assured that "it is true that the video is anonymous and made in a more obscure way. However, it warns that it was a journalistic operation against us". Hazırbulunuşluk - Zamanlama2. Ayşe 7 yaşında olmasına rağmen, kalemi düzgün tutamamakta ve yazı yazarken zorlanmaktadır. Ayşe'nin bu sorunu aşağıdaki süreçlerden hangisi ile ilgilidir?3. Ali'nin gelişimi, yaşıtlarına göre hızlı olduğundan anne babası 1,5 yaşından sonra tuvalet kontrol eğitimi için uygun yaşantıları sağlamalarına rağmen, biyolojik donanımı, bunu yerine getirememiştir. Ali'nin bu durumu, aşağıdaki gelişim psikolojisi kavramlarından hangisine bir örnektir?4. Çocuğa kazandırılacak özelliğin olumlu ya da olumsuz anlamda çevresel koşullardan en çok etkilendiği, yani çocuğun dışsal etkilere karşı en hassas olduğu dönemdir. Bu dönemde çocuğun sosyal çevresinin koşullarının düzenlenmesi ve çocuğa uyarıcı zenginliği yaşatılması gerekmektedir. Bu parcada gelisim ile ilgili asağıdakilerden hangisinin önemi vurgulanmıştır?5. İnsan gelişimine ilişkin aşağıdaki ifadelerden hangisi doğrudur? Gelişim sürecinde bireysel farklılıklar görülmez. Gelişim nöbetleşe devam eden bir sürectir. Gelişim çevre ile etkileşim sonucu ortaya çıkar.6. Birçok yaşıtının ilk süt dişi çıkmasına karşın Esma'nın dişi henüz çıkmamıştır. Bunun üzerine telaşlanan Esma'nın dişi henüz çıkmamıştır. Bunun üzerine telaşlanan Esma'nın dişi henüz çıkmamıştır. Bunun üzerine telaşlanan Esma'nın annesi bir uzmanın yapacağı açıklamaya uygundur? Gelişimde bireysel farklar vardır. Gelişim, baştan ayağa doğrudur. Gelişim, hayat boyu devam eden bir süreçtir. Gelişimde kritik dönemler bulunur. Gelişimin hızı ve devamlılığı çevresel ögelerden etkilenir.7. Çocukların günlük yaşamda ağırlıklı olarak hangi ellerini kullanacakları yaklaşık 8 yaş civarında kesinlik kazanmaktadır. Ancak araştırmalar çocukların el tercihlerini 2 yaşından itibaren yapmaya başladıklarını göstermektedir. Bilim adamları insanlar arasında sağ el kullanımının sol el kullanımının sol el kullanımının sol el
kullanımının sol el kullanımının sol el kullanımının sol el kullanımının sol el kullanımının sol el kullanımının sol el kullanımının sol el kullanımının sol el kullanımının göre daha yaygın olması nedeniyle yaptıklar araştırmalar ve arkeolojik bulgular eski uygarlıklar araştırmalar ve arkeolojik bulgular eski uygarlıklar araştırmalar ve arkeolojik bulgular eski uygarlıklar araştırmalar ve arkeolojik bulgular eski uygarlıklar araştırmalar ve arkeolojik bulgular eski uygarlıklar araştırmalar ve arkeolojik bulgular eski uygarlıklar araştırmalar ve arkeolojik bulgular esk elin yaygın olarak kullanılması asağıdaki kayramlardan hangisiyle acıklanabilir?8. Boşanmış aile cocuklarındaki duygusal gelişim evrelerini incelemek isteven bir araştırmacı, asağıdaki veri toplama tekniklerinden hangişini kullanmalıdır?9. Fiziksel gelişim ile ilgili asağıdaki ifadelerden hangişi doğrudur? Fenotip, ana-babadan kalıtımla getirilen özellikler bütünüdür. Bir fenotipten pek çok genotip ortaya çıkabilir. Kız çocuğun cinsiyet kromozomu XY'den oluşur. İnsan vücudunda 46 adet kromozom bulunur. Kahverengi göz çekinik gene örnek teşkil eder.10. Ergenlik dönemine ilişkin aşağıdaki ifadelerden hangisi doğrudur? Kız çocukları 13 yaş civarı, erkek çocukları ise 15 yaş civarı buluğ dönemine girerler. Kız çocuklarında boy artışı 15 yaş civarında görülür. Erkek çocuklarında ağırlık artışı 14 yaş civarında görülür. Erkek çocuklarında ağırlık artışı 14 yaş civarında görülür. Erkek çocuklarında ağırlık artışı 14 yaş civarında görülür. Erkek çocuklarında ağırlık artışı 15 yaş önce buluğa girerler. 11. Gelişim psikolojisine ilişkin aşağıdaki ifadelerden hangisi yanlıştır? Dil gelişimi ile bilissel gelişim arasında paralel bir ilişki vardır. Üst düzey ahlaki davranışlar, soyut düşünmeyi gerektirir; ama soyut düşünme için üst düzeyin tersi doğru değildir. "Kimlik arayışı" statüsünde bulunan ve anne babalarıyla aralarında sorunlar olan gençler, olumlu bir kimlik statüsüne sahiptirler. Kızlarda ilk adet kanaması, ergenliğe geçişin de ilk işaretidir. Ergenlik döneminde kızlarda östrojen, erkeklerde testosteron hormonlarının ilk kez salgılanmaya başlamasıyla, birincil cinsiyet özellikleri kazanılır.12. Ergenliğe yaşıtlarından daha geç giren Yağmur, sık sık yetersizlik duygusuna kapılmakta ve özgüveni de giderek azalmaktadır. Yağmur'a yapılabilecek yardım aşağıdaki seçeneklerden hangisidir? Başarısız olabileceği için sportif faaliyetlere katılmasının engel olunması, Yağmur'un olumlu kişilik özelliklerinin ön plana çıkarılması, Yağmur'un bu durumuyla alay edilerek, duyarsızlaşmasının sağlanması, Karşı cinsten yakın bir arkadaşı olması için zorlanması, 13. 6 aylıkken eline geçirdiği nesneleri yere atan Emir, 2 yaşına geldiğinde değişik şekillerde fırlatmaya başlar. Bu farklılaşma Piaget'nin bilişsel gelişim ilkelerinden hangisi ile açıklanabilir?14. Doğduğundan beri ilk kez emzik gören bebeğin emme davranışı göstermesi bilişsel gelişim yapılarından hangisi ile açıklanabilir?15. 7 yaşındaki İlayda, kokusunu cok beğendiği papatyayı komşularının bahçesinde gördüğünde "bu ne kadar büyük papatya" demiştir. Dila Hanım da "o papatya değil kasımpatı" demiştir. İlayda'nın: "Kasımpatya, büyük papatya demesi; aşağıdaki kavramlardan hangisi ile açıklanabilir?16. 7 aylık Aslıhan, mama sandalyesinde otururken, çıngırağını yere düşürür. Ancak çıngırağını aramak ve geri almak için hiçbir harekette bulunmaz. Bu durum Piaget'nin bilişsel gelişim kuramına göre, aşağıdaki ifadelerden hangisi ile açıklanabilir? Nesne sürekliliğinin gelişimemiş olması. Cıngırağın uzun süreli belleğe aktarılmamış olması. Psikomotor gelişiminin yetersiz olması.17. 4 yaşındaki Mert, ailesi ile nehir kenarında piknik yaparken, babası birden sorar: - Oğlum, nehir niye böyle akıyor sence? Mert cevap verir: - Canı öyle hareket etmek istiyor. Babasının sorusuna bu şekilde cevap verir: - Canı öyle hareket etmek istiyor. Babasının sorusuna bu şekilde cevap verir: - Canı öyle hareket etmek istiyor. Babasının sorusuna bu şekilde cevap verin den karanında piknik yaparken, babasının sorusuna bu şekilde cevap verin den karanında piknik yaparken, babasının sorusuna bu şekilde cevap verin den karanında piknik yaparken, babasının sorusuna bu şekilde cevap verin den karanında piknik yaparken, babasının sorusuna bu şekilde cevap verin den karan (Canlandırmacılık) Özelden özele akıl yürütme18. Piaget'in gelişim kuramıyla ilgili aşağıdaki ifadelerden hangisi yanlıştır? Bireyin gelişiminde çocukluk dönemi en önemli dönemdir ve bu dönemin olabildiğince uzun sürmesi gerekir. Öğrenciler, bilgiyi olduğu gibi almak yerine onu vapılandırırlar. Yeni bilgiler, önceden var olanlarla birleştirilerek çevreve uvum sağlanır. Bu uvum sağlama süreci, öğretim ortamları bir uyum süreci olarak görülebilir Soyut düşünme için üst düzey ahlaki davranışlar gerekir, ancak tersi doğru değildir. Piaget, tüm çocukların gelişim dönemlerini sırasıyla geçirmesi gerektiğine inanmaktadır. İşlem öncesi dönem olarak da ifade edilebilir.19. 3 yaşındaki Beste, kahvaltısını yaptıktan sonra annesi: "Hadi bakalım; elimizi yüzümüzü yıkayalım." demiştir. Beste, elini yıkadıktan sonra yüzünü de yıkamıştır. Annesi, "Kızım elini yıkadın; ama yüzünü neden yıkadın?" diye sorunca; "ama anne sen söyledin" diye cevap vermiştir. Beste'nin içinde bulunduğu dönem de dikkate alınarak annesiyle bu şekilde konuşması aşağıdaki kavramlardan hangisi ile açıklanabilir? Tek özelliğe göre sınıflandırma Özelden özele akıl yürütme Nesne sürekliliğinin kazanılmaması20. Nil, altı yaşında okul öncesine devam eden bir öğrencidir. Okulda arkadaşlarıyla yan yana oyun oynamaktadır. Her gün çok sevdiği ayısını evde unutmuş ve evde tek başına kaldığı için çok üzülmüştür. Öğretmeni, "nasıl unuttun?" diye soruduğunda bebekleri alırken hayvan oyuncakları unuttuğunu söylemiştir. Piaget'in bilişsel gelişim kuramına göre, Nil'in: I. Çantasını okula her gün götürmesi sembolik oyundur. II. Arkadaşlarıyla birlikte oyun oynayamaması paralel oyunlar dönemidir. III. Ayının evde tek başına kalamayacağını düşünmesi canlandırmacılıktır. IV. Herkesle birlikte oyun oynayamaması benmerkezciliktir. V. Sadece bebekleri düşünebilmesi odaktan odaklanmadır. ifadelerinden hangileri doğrudur?
