## Airbus x extended liveries

Airbus X Extended A320 Finnair One World OH-LXD. Textures only for the Airbus X Extended A320 payware model. From Vitaly Romanenko. FSXDownload Finnair Airbus A320 and A319. Finnair new color repainted. Tests for the CFM Project Airbus A320/319 model only. Tomi Koivunen. FSX, FS2004Download Description: Coating of Finnair A319 OH-LVF for Wilco/FeelThere Airbus Series Vol.1 Original payware-package is required. Just texture! FSX, FS2004 Download Description: Repair of Finnair A320 OH-LXM for Wilco/FeelThere Airbus Series Vol.1 Original payware-package is required. Just texture! FSX, FS2004 Download Description: Repair of Finnair 757-200 for QualityWings. The original payware package is required. Just texture! FSX, FS2004 Download Description: Coating of Finnair A320 OH-LXL for Airsimmer A320. The original payware package is required. Just texture! FS2004Download With Aerosoft Airbus A320 released in different version over time, we happen to run some issues regarding texture compatibility. The problem came first from me, after Aerosoft released the Aerosoft Airbus A320/321, which was preceded by Airbus X Extended. The problem was that the textures were displayed on a darker tone, just compare the two images below. The problem is a file located in each texture folder. It is the texture.cfg. It can be found in: Drive/Program Files (x86)/Microsoft Games/Flightsimulator X/Simobjects/Aircraft/any Aerosoft Airbus folder. So, if you experience problems with my liveries as shown above, this is your little problemmaker. My liveries are made for the latest version of the Aerosoft Airbus, so the older version would experience problems. I can't say for sure if the Airbus X Extended suffers the same problems as vice versa, so if there is a different problem, do not hesitate to contact me so that you can solve it. At this point I can tell if the new Aerosoft Airbus Professional is not compatible. All liveries will be made compatible over time. PLease see the table below for which the plans are still compatible. A320/321 A318/319 Fix Airbus X non-compliant Download Airbus X Extended unavailable Download Aerosoft Airbus Compatible not required AS Airbus Professional Aircraft Compatibility A318all Compatible A319all A320non Compatible A321non A: Rudolf-Klug-Weg 9 22455 Hamburg Germany T: + 040 20953775 LIVERY AddonsAriel Creation Signing-up Flight Simulator for PRO offers super fast speeds, no restrictions on thousands of MSFS downloads, FSX, P3D & X-Plane which include planes, landscapes and more - click here to see the library for free or... In this section you will beThird repainting part for the Airbus X created by Aerosoft. These repaintings will also work for the Airbus X A320/A321 (formally known as Airbus X Extended) Latest Reviews Top 01-25-2015,Ä 12:32 AM #1 Hi, When I try to manually install liveries for the Airbus X A320/21, my VC for that livery becomes black. I can't install it automatically because I get a mistake. Help me, thank you. Sam P.S. Automatically install liveries for A318/19 and works. 01-25-2015,Ä 01:32 AM #2 The liveries A318/319 should not be a problem as there is only one version. The A320/321 is different because there are three versions, namely the AirbusX released in 2010, the AirbusX Extended since 2012 and the latest release A320/321 since 2014. AirbusX repaints cannot be installed with Livery Manager but must be installed with the "old style" CUT & PASTE method and the same with the aircraft voice.cfg . The reason for this is quite simple, the Livery Manager was not even thought about when the AirbusX was released. The VC textures are also not compatible with the "newer" versions and either create a new version or live with an empty license plate in the cockpit. The same applies when installing a repaint from the Extended or later version to use in the AirbusX. Aerosoft Airbus repaints of any version work with all versions, but you have to COPIARE a texture.cfg from another aircraft (functioning) of the same type if you encounter some problem with the VC. Maybe you should visit the Aerosoft forums where this information is easily available. John Glanville 07-29-2016,Ä 02:26 PM #3 I think I have this problem, currently I have the Airbus X, some liveries work but others do not. As you can see, this often happens to different textures but I'm not sure why 07-30-2016,Ä 12:56 AM #4 Repaints Aerosoft Airbus from any version work with all versions but you have to COPIARE a TEXTURE.CFG from another (functioning) aircraft of the same type if you encounter some problem with the VC. Or the textures themselves. It cannot be more clear than that, just copy a texture.cfg from one of the liveries provided with the product. Visiting the Aerosoft forum (after all you have purchased an Aerosoft product) and actually reading the arguments there, many of these "problems" would be solved before they become "problems."
