To get started, follow these simple steps: Furthermore, we now allow you to extract text from images as well. To scan a photo online, simply upload your image using the "Add Image" button or drag-and-drop functionality. You can even capture photos directly with your mobile device's camera or an external one. Mobile users can click on the upload button to access the camera option. Once your photo is uploaded, a pop-up will appear displaying the image. The pop-up will include a crop button, and our online scanner automatically detects the document's layout within the photo - much like CamScanner. To adjust the scan area, simply click on the crop button, which will detect the corners of the page with the photo on it. You can further fine-tune these corners to fit the page perfectly. After cropping your photo, a 'Magic' scan effect will be applied automatically based on our algorithm's best guess for the layout. However, you also have the option to change this effect by selecting from one of four different options: 'Magic Effect', 'Simple Effect', 'Black and White Effect', or 'Original Effect' - which resets all effects back to their default state. After your document has been scanned, click on the save button to download your scanned photo. Once you've saved your image, it will be visible in the image box area along with a 'Download' button. You can choose to download your scanned document photo either as a '.JPG' file using the 'Image Button' or in PDF format if you select the 'PDF Button', which combines all images into one single file.
