How to connect to open wifi network on android.

Read on to learn how to: access wifi settings connect to wifi turn wifi on and off Follow these step by step instructions to set up a wifi connection on your Android phone 1. Swipe down from the top of your phone and tap on the wifi button. Alternatively, from the Home page, go to Apps > Settings and tap on the button next to wifi so that it turns green with a line down the middle. Step 2: Tap on 'wifi' to see the list of available networks. It may take a moment for all available networks to show up. You can force your device to check for networks by tapping on 'Scan'. Step 3: If you would like to join a hidden network, tap on 'Add Wi-Fi Network' and type in the network SSID, making sure you have the correct spelling. Check with your network administrator if you're unsure of the name of the wifi network you want to use. Step 4: Select the network you would like to use. If this is an open wifi connection, you will automatically connect without any further action needed, but be aware that this will not be secure. Step 5: If you are trying to connect to a secure network, you will need to enter the correct password. This may be found on the back of your router, but if you do not have the password, ask your network administrator. Step 6: Once you have connected to a network, your phone will automatically remember the details so you don't have to re-enter the password in future when you're in range and your wifi is switched on. Step 7: If you want to switch off your wifi connection, either swipe down from the top of the screen and tap on the wifi button to turn it off or go to Apps > Settings and tap on the wifi button to disconnect. The button will turn grey with a blue circle. Now we should be able to go into an Android phone's settings and set up wifi. We know how to switch it on and off from both the home screen and the settings page. We also know how to join open, secure and hidden wifi networks. From here, you might like to learn more about how to use your Android phone to get the most out of your wifi connection to browse the internet or quickly download apps to your device. If you have a cap on how much mobile data you can use, you should know how to connect your Android phone to a Wi-Fi network. Using Wi-Fi won't cost you anything, won't count towards your data cap, and will often give you faster internet speeds. Connecting your Android phone or tablet to Wi-Fi is a quick and easy process. And once your Android knows a network, it will store that network's password and automatically reconnect whenever you're in range. Here's how to connect: Samsung Galaxy S10 (From $899.99 at Best Buy)How to connect to Wi-Fi on an Android device1. Open your Android's Settings app. On some Android devices, you can find the Settings app by swiping up from the bottom of the screen. Steven John/Business Insider 2. Tap the word "Connections." On some Android devices, this tab may be labeled "Network & Internet." Steven John/Business Insider 3. In the new menu, tap "Wi-Fi" and then look under the "Available Networks" heading.4. Select the Wi-Fi network that you want to tapping it. If it's locked, enter its password, and then tap "Connect." Wi-Fi networks that are password protected will display a lock icon. Steven John/Business Insider If you're trying to connect to the Wi-Fi at certain public locations — this includes sports arenas, airports, libraries, and more — you may need to also agree to the network's terms and conditions. You can usually do this by opening your internet browser and trying to load a new page, where you'll be automatically redirected to the Wi-Fi network's login page.

To disconnect from a Wi-Fi network from the screen depicted above and tap "Forget." connect","noIndex":0,"noFollow":0},"content":"Making Wi-Fi work on your Android phone requires two steps. First, you must activate Wi-Fi by turning on the phone's wireless radio. The second step is connecting to a specific wireless network.Wi-Fi stands for wireless fidelity. It's brought to you by the numbers 802.11 and the letters B, N, and G.Activating Wi-FiFollow these steps to activate Wi-Fi on your Android phone: At the Home screen, touch the Apps icon. Open the Settings app. Ensure that the Wi-Fi master control icon is on.If not, slide the master control icon from Off to On to activate the phone's Wi-Fi radio. If you've already configured your phone to connect to an available wireless network, it's connected automatically. Otherwise, you have to connect to an available network, which is covered in the next section.To turn off Wi-Fi, repeat the steps in this section, but in Step 3 slide the master control icon from On to Off. Turning off Wi-Fi disconnects your phone from any wireless networks. You can quickly peruse your phone's Wi-Fi settings by choosing the Wi-Fi quick action. See Chapter 3 for more information on quick actions. Some phones may come with a Power Control widget affixed to a Home screen. One of the buttons on that widget is used to turn Wi-Fi on or off. Using Wi-Fi to connect to the Internet doesn't incur data usage charges. The Wi-Fi radio places an extra drain on the battery, but it's truly negligible. If you want to save a modicum of juice, especially if you're out and about and don't plan to be near a Wi-Fi access point for any length of time, turn off the Wi-Fi radio. Connecting to a Wi-Fi networkAfter activating the Wi-Fi radio on your Android phone, you can connect to an available wireless network. Heed these steps: Open the Settings app.It's found in the apps drawer, but you'll also find a shortcut in the quick actions drawer. Choose Wi-Fi or Wireless & Networks.Don't touch the Master Control icon, which turns the Wi-Fi radio on or off; touch the Wi-Fi text on the left side of the Settings app screen.You see a list of Wi-Fi networks. In the figure, the Imperial Wambooli network is currently connected. Choose a wireless network from the list.When no wireless networks are shown, you're sort of out of luck regarding Wi-Fi access from your current location. If prompted, type the network password.Putting a check mark in the box by the Show Password option makes it easier to type a long, complex network password. Touch the Connect button.You should be immediately connected to the network. If not, try the password again. When the phone is connected, you see the Wi-Fi status icon atop the touchscreen, looking similar to the icon shown. This icon indicates that the phone's Wi-Fi is on — connected and communicating with a Wi-Fi network.Some wireless networks don't broadcast their names, which adds security but also makes accessing them more difficult. In these cases, touch the Add icon to manually add the network. The command might be titled Add Network.You need to type the network name, or SSID, and specify the type of security. You also need the password, if one is used. You can obtain this information from the girl with the pink hair and pierced lip who sold you coffee or from whoever is in charge of the wireless network at your location. Not every wireless network has a password. They should! Some public networks are open to anyone, but you have to use the web browser app to get on the web and find a login page that lets you access the network. Simply browse to any page on the Internet, and the login page shows up. The phone automatically remembers any Wi-Fi network it's connected to as well as its network password. An example is the AS_BOARD_ROOM network, shown. To disconnect from a Wi-Fi network, simply turn off Wi-Fi. Unlike the mobile network, a Wi-Fi network's broadcast signal goes only so far. Use Wi-Fi when you plan to remain in one location for a while. If you wander too far away, your phone loses the signal and is disconnected. Connecting via WPSMany Wi-Fi routers feature WPS, which stands for Wi-Fi Protected Setup. It's a network authorization system that's really simple and quite secure. If the wireless router features WPS, you can use it to quickly connect your phone to the network.To make the WPS connection, touch the WPS connection button on the router. The button is labeled WPS or sports the WPS icon. On your phone, visit the Wi-Fi screen in the settings app. Touch the WPS icon to connect to the network.If the WPS router requires a PIN (Personal Identification Number), touch the Action Overflow icon on the Wi-Fi settings screen and choose the WPS Pin Entry item.","description":"Making Wi-Fi work on your Android phone requires two steps.
