Source: GitHub The GitHub app is now generally available on iOS and Android. The application was under beta testing for several months to receive feedback. The app allows you to manage your GitHub account and projects on the go. Microsoft's GitHub announced the beta version of It's Github Mobile App last November. Now, after months of beta testing, the app is generally available for iOS and Android. The app allows you to manage your GitHub account and projects on the go. You can take the app from the Google Play Store or Apple's App Store for free. Publishing Github Announcing the general availability of the application breaks down some of the things you can do with the application: organize tasks in one go: get your inbox to zero at any time: swipe to finish a task or save the notification to get back to it. Gives feedback and responds to problems: responds to comments while on the move. Review and merge track requests: merge and mark track requests to breeze through your workflow, wherever you are. The GitHub Mobile app works with individual GitHub Plans, Equipment, and Cloud Enterprise. GitHub claims it is working on adding features and APIs so that the application can work with Enterprise Server later this year. This mobile application allows you to search for notifications, read and respond to problems and tracking requests, and review and merge tracking requests. It is a handy tool for managing GitHub projects and your account on the fly. We can earn a commission for shopping using our links. Learn more. Microsoft Launcher Google Now Apex We've selected three major Android Launcher alternatives for you to review. Microsoft Launcher is a clean and mess-free solution, with a focus on the stylish and a convenient button that you press one to change your wallpapers using Bing's carefully selected daily images. It comes with a clean side panel where you get a lot of useful widgets: recent and popular contacts, setup reminders, weather alerts and so on. The arrow also has a blow up from the lower gesture that brings a menu. menu. Control center on the iPhone, which is certainly handy (but this particular item of the launcher tends to stutter on some phones).The Google Now Launcher is probably the best way to get the stock and contemporary look of Android as Google sees it. With the latest update, Google Now Launcher allows you to standardize the size of the icons so that there are no longer giant icons that contrast with much smaller ones, and even allows you to use your phone horizontally (which we find impressive).Apex Launcher has long been Nova's number one alternative. Launcher, offering a similar level of depth and customization. Pixel Belle Delta Polycn Get this iPhone for users à You can change your icons on Android! If you already use a custom launcher, you can download one of the many icon packs available on the Play Store (most of them are free or cost a dollar). We love the Pixel Icon Pack that brings the fantastic images of Android Nougat to your device, and we've provided you with three of our recent favorites to review, but don't hesitate to explore the Play Store and find the one that best suits your style. Wallpapers Google Muzei Wonderwall Unfortunately, most phones these days don't come with enough customization options out of the box, and often the choice of wallpapers built into the phone is very limited. Luckily, there are some killer wallpaper apps on Android that can really make your screen come alive and feel... personal. Wallpapers by Google is one of the best options with a selection of trendy wallpapers (including the catchy satellite view of our beautiful planet Earth) that the app will rotate daily.Then we have Muzei, developed by Google engineer Roman Nurik. Muzei has been updated recently adding integration drop-down notification icons on Android 7 Nougat, and is more stable now. The app allows you to set a small blur on your wallpapers, so that the image doesn't distract you from your apps. This way you get a gradient appearance that that A mood, but not distracting. Wait, but not least, we have Wallp, an application that has accumulated all the wallpapers of different popular (and not so popular) phones. Needless to say that all these are very high quality wallpapers that are worth checking out. The Zooper Zooper widget provides one of the best options for fully customizable widgets: you can adjust the widgets to any wallpaper and style, as it is easy to choose various wallpapers, fonts and styles for clock, calendar, weather, weather and a lot of other information that is widget-capable. The other great widget application is KWGT, and both solutions come with a lot of add-ons and extensions that will make your device unique and functional through some creative widgets. Google Photos Google Photos brings a small revolution in image storage and image sharing: it comes with unlimited cloud storage for images up to 16 megapixels (and you can choose to shrink and compress very lightly larger images) and for videos up to 1080p. It also makes sharing images and albums extremely easy and works equally well across all platforms: iOS, Android, the Web, and literally anything else with a browser. Finally, you also have a new bright selection option that allows you to drag your finger and use it as a computer mouse. Basically magically, it also allows you to search (and actually find) images by simply typing a few words like 'animals' that will filter all the images of animals in your photo collection. Magic.Google PHOTOS is probably the most excellent app to keep your photos in the cloud, but when it comes to the simplicity of organization, QuickPic is still the way to go on Android. His overwhelmingly positive ratings show that simple works: it is a lightweight with a modern design and connects to online storage servers. It acquired Google a couple of a couple of years

ago for a good reason: it has an interface that allows you to edit images on your phone very easily with an intuitive swipe. You have a powerful option of selective settings, so that you can touch a particular point and edit only a certain part of an image instead of the entire image. Snapseed has no ads, works smoothly and is probably the best way to edit photos on android.vSCO cam is a visual Supply Company application, a signature known to develop some of the best film emulation filters for Adobe Lightroom, and not it is surprising that this experience has given rise to a collection of some incredible filters that you can get at VSCO CAM. The beauty of VSCO filters (or more well presets) lies in the subtle measure of the artistic effects that will help you have an idea of the correct amount of retouching necessary for a photo, and also avoid over-medium of your images.camscanner is a great application if you want to make sure that all important documents you have scanned and reside safely in the cloud (and safely, we want to say far from thieves, maybe not so much NSA). Camscanner allows you to scan and modify them to make high quality PDF, not some cheap photos taken on your cell phone. 500PX Flickr Eyeem If you are looking for a place to share your photos, see other images and participate in a photo forum that would improve your photograph, 500px and flickr are two of our favorite places to visit. Both have new and modern applications with a great visual style and both work very well on Android. A third option that we like to use is Eyeem, an app that offers a more dynamic community where you can see featured photographers and find inspiration. GoPro movement to the Software Territory began with the application of Quik video edition and is an excellent solution that will automatically create attractive video compilations that you can then share easily. Magisto is another video manufacturer established that will add music and effects to your videos and animate them. VLC is known for being the video player that can easily chew through all kinds of formats with ease on desktop, desktop, is equally excellent on the mobile. After years of testing, the application is out of beta and works alone. Our previous favorite application, the MX Player, has been around for years and is still a great video player that we still use. Its swipe interface is tailor-made for touch devices: swipe left and right to jump back and move fast; swipe up or down (in the right half of a device) to adjust the volume, and swipe up or down in the left half to adjust the brightness. Spotify needs little presentation. The \$10 music subscription service allows you to listen to more than 20 million unlimited songs without ads, a model that comes to replace the current buy-an-album. You also have free Spotify that does not require a paid subscription, but introduces ads and limitations. Sometimes you need to do something as simple as cutting out a part of a song. We've found that Lexis Audio Editor does a good job as a wave editor, allowing you to accurately crop and export your creations easily. If you're a djay, chances are you don't trust your phone, but in case you're up and running or something goes wrong, Android has djay2. The app works great on modern phones (and not so well on older devices), and when it works it offers you a lot of options: from slowing down and speeding up songs, to some clever mixing techniques.If you like to make music and want to create some rhythms on the go, Nanoloop is one of our favorite Android tools. Nanoloop combines sequencer, synthesizer and sampler in one package, and is a very minimalist but very well done tool for creating electronic music.So, if you're a music professional looking for an app to help you edit more complex projects, you can always rely on 3 and FL Studio Mobile. These complex apps will work best on a well-equipped tablet, where the extra screen space is a welcome addition.Signal is a messaging app that allows you to have private conversations via text messages and voice calls. It's free, free, Group calls and text messages, and allows you to share media. Best of all is that it is open code, so you can be sure that all encryption is done correctly and that hands more and more long government will not arrive your private life. The server does not have access either To any of its communications and never store any data. The creator of the Russian social network VK.com Pavel Durv has officially been removed from the execution of his own product, but he has focused on creating Telegram, a secure messaging application. The application uses encryption and although it is not as resistant as signal, it is a popular solution that seems more sure that most of others messengers by there. Accubattery is a detailed battery application that provides an estimation of the battery duration on the screen for its device and is extremely useful to determine which application uses how many battery resources. It is simple, well designed and has a free and payment option (we recommend buying this last). Greenify is a simple application of battery management that ensures that no application is abusing the system by consuming too many resources. He warns you about it and allows you to control the duration of your battery. BitDefender Norton Avast Let's leave a clear thing: unless you access some third-party applications or open dark files of those you do not know anything, you should not worry about antivirus applications on Android. The intelligent Sandboxing mechanism on which the platform is based, makes Android very safe. However, if you have any questions about your device, these three are the best antivirus applications of everything. Bitdefender has an elevated price, but it does an excellent job, while Norton is a freemium application that you can explore, and Avast is a good third option to have. Google Drive is deeply integrated into the Android platform and it is a service. We rarely use wires to transfer files these days: we just send them to this cloud app with 15 GB of free storage that would be enough for many people. You can also buy a \$2/month plan that gives you 100 GB space, or spend \$10 per month for 1 TB of cloud storage. Then you have Dropbox, which also offers an easy-to-use app with a 1TB storage option that costs \$100 a year. It's an equally great option and it's up to you to decide which one you like the most (we stayed with Google Drive because of the way it integrates with other Google services). Asus File Manager Astro File Explorer Google's new Go File Manager application may still be in beta, but it works great, has a clean interface and comes with superpowers like the ability to quickly send large files between two devices. It also helps you free up storage space on your device easily.Other options worth considering are the following: The Asus File Manager application allows you to access your files in an organized way and is free and feature-rich. Our other two available options are the NextApp File Explorer or the Astro File Manager, which provide a slightly different layout, but very similar functionality. We recently learned that AirDroid, our application for wireless file transfer between our laptops and phones, wasn't as secure as it should have been. Some upgrades have happened in the interim, but this was enough to push it to second place, behind the very excellent AirMore which provides almost identical functionality, without all the lint that AirDroid has been adding recently. LastPass keeps your password and personal information safe. Lock your passwords into a secure vault, automatically populate your web browser and application login, and generate new secure passwords.With LastPass, you only remember one password, your LastPass master password. Store accesses, create profiles of online purchases, secure passwords, track personal information in photo and audio notes, and more.1The password, on the other hand, creates secure passwords for each site and remembers them. If you have trouble remembering all the passwords you use, 1Password will do it for you. The new version of the application is complete and work on phones and tablets. And if there's one thing we keep learning over the years, it's that security is the number one concern that mobile users have. With this app, you can use ridiculously complex passwords (such as those generated by 1Password), and let the app remember them. A virtual private network (VPN) is a great tool for advanced users in all kinds of cases: from security to accessing content that for some reason might be blocked in a given region. Opera Free VPN is our favorite app for Android VPN for its simplicity and unbeatable price for free for the base version. You also have the Turbo VPN as an alternative, another well valued application that will do the job well. If you are accustomed to using torrent files for any reason, Flud is probably the best BitTorrent client out there: clean, simple, no download or upload restrictions, closely following the Material Design guidelines. It allows you to select which particular stream files to download, gives you file and folder priorities, and has magnetic link support. We offer you two options to turn your phone into a smart remote control: either to control anything on your laptop/desktop, or if your phone has an infrared projector to control your TV or air conditioning. Sometimes laziness can feel good. 7 Minute Workout Finally, since we always have our phones in our pockets, it is worth using them for something that will really benefit our health: for our workouts. We have a hard time recommending a complete fitness app for phones, as we believe that a gadget doesn't belong in the gym where you work out, but for light exercises and as a reminder to go jogging or do those famous 7-minute exercises to energize you while you're at the office, Runkeeper 7-Minute Workout are two great applications. ESPN THESCORE BLEACHER REPORT ESPN has launched a completely redesign application for Android that has a very simple and easy style to use and you can easily stay informed about the latest news about your favorite sports team. Not only that, you get live results updates every minute about the games, as well as a news section that comes with a lot of videos. The focus of the new ESPN app are the following leagues: MLB, NFL, College Football, NBA, College Basketball, MLS, Cricket and more. If you want more scores, news and analysis, the Score stands out on the first one, while The Bleacher Report does very well on the last two. Moves is a motion tracking application with a simple interface, but most importantly, it doesn't require you to constantly play with it. You only have to start once, and it will track your steps, driving, cycling and racing in the background. In addition, you will also map your daily activity on a map. The fact that the app has been acquired by Facebook attests to the fact that you get a sleek and smooth experience. We all have those periods where you get sick, and suddenly you find yourself taking a handful of medicines to get better sooner. Medisafeas Meds and Pills Reminder will help you keep track of when those medicines are due in a simple and easy way. The Clue Period Tracker is the best app to track your period and although you probably don't mind if you're a guy, your girlfriend will surely appreciate you showing her this useful app. Hopper Hopper is a cool airfare service that sends you alerts when it's the right time to buy a ticket, based on algorithms that predict whether prices are likely to go up, down, or stand aside in the near future. That's not all there is in the new Hopper for Android, though, since it has one of the most user-friendly designs we've seen from such apps, with no unnecessary features and distractions, and with large and easy-to-touch icons, fields entry and calendars. Hopper will give you airfare alerts only when the prices to our place of choice have reached the lowest point, and are about to go up, so check it out if you are traveling, it might save you quite a lot on airline tickets. We also like Skyscanner with its Eagle-Eye view on different flight and ticket vendors, and it also comes with the promise to give you the best price for your flight. Fashionistas, unite! Well, at least take a look at these two apps that will give you a ton of new ideas about dressing and styling. Houzz Houzz is a great center for getting ideas for home design and renovation with a lot of images that will help you visualize what you want to build or change before making many mistakes on your own. With excellent notification in the form of a weekly newsletter, Houzz has become our place for those moments when just changing something at home can help us make sense of the chaos in our minds. Feedly Yahoo News Digest Google News The new Yahoo at Marissa Mayer is an interesting combination of a tech tech and a media company, and the Yahoo Digest news app is a shining illustration of the direction in which you are going to Yahoo. The application is elegant and with thoughtful curation of human editors, is presented with a morning and evening digetes of the most important news from around the world. We love the idea of having around 10 news pieces for each digest: you can quickly move between the leading themes and get a sense of completion that news addicts, who otherwise tend to spend much more time digging for news, will appreciate it. Someone who reads news as a job or a serious hobby, isn't there a better way to keep up with everything that's going on than a full news reader? After the unfortunate demise of Google Reader, it has become the number one alternative with periodic updates, slick interface and even a bonus level that offers even more functionality. GasBuddy Here is a useful application that is Essential for travelers who want to recharge at the most cheap price anywhere: Gasbudy. This small application is particularly useful in the United States, where you can use it to find the service station that offers the best offer. offer. all of them. Why would you need it? Well, if you never leave your hometown and already know all the gas stations there, probably not, for everything else the reasons seem pretty obvious. Duolingo has brought a small revolution to language acquisition on a mobile device. Its simple, repetitive approach works well to introduce you to a language in its four incarnations: reading, writing, speaking and listening. Duolingo currently allows you to learn Spanish, French, German, Portuguese, Italian, Dutch, Irish, Danish, Swedish and English. We hope for an equally easy way to learn Asian languages! Khan Academy has accumulated a large number of lessons in both text and video to help you learn all kinds of subjects: from basic maths to more complicated clusters, all explained in a system that allows you to continue only after you have mastered the required content. It's a great way to learn, especially for the sciences, but it also applies to the arts. Khan Academy offers articles in mathematics (arithmetic, pre-algebra, algebra, geometry, trigonometry, statistics, calculus, linear algebra), sciences (biology, chemistry, physics), economics and even humanities with tutorials on art history, civics, finance and much more. Tinder Bumble OkCupid Everyone is on Tinder these days, and that's what makes this simple app â€œhot or notâ€ a great choice for those looking for a date, and maybe something more. We're not big fans of the superficial focus on people that lies at the core of Tinder, but at the end of the day it's up to you to shape your relationships with people. IMDb It's the great little app with its cool videos and and our best option for most people out there. Yummly is our second favorite cooking app, and while there are many others that are just as great, we highlight Yummly for its impressive filters that allow you to easily discover dishes of different styles and kitchens.SimpleFeast is a more sophisticated application with a payment level for those looking for recipes from chefs of proven excellence. Yelp is another service that has grown thanks to the excellent reviews of its users.Yelp is another service that has grown. Whether it's reviews for a gym or a restaurant, Yelp will most likely help you make the right decision not only in the United States, but in most English-speaking territories.
