How to get packs in madfut 23

Madfut 23 is an exciting football pack opener game featuring popular football superstars' cards. Players can collect packs, build their team, and compete with others worldwide. To succeed, it's essential to know the game mechanics, such as earning tokens to buy players from the market and completing achievements to earn rewards. MADFUT 23: Expert Tips for Success MADFUT 23 is a spin-off of FIFA Ultimate Team, where you can draft and collect cards of your favorite football/soccer players. To get started, fill out your team with the free draft and then participate in various competitions to win rare card packs, coins, tokens, and other prizes. Before engaging in game modes, practice building a team in the team builder mode to ensure it has good chemistry, as this will give you a competitive advantage against other players. Chemistry is key when drafting and competing in battle modes, where you'll need to field players from the same country, continent, or league for maximum effect. In battle modes, each player picks one player to attack, defend, or control, depending on their preferred position. Fielding players out of position will suppress stats, while those with good chemistry ratings will boost them. To maximize your chances, focus on fielding players in their preferred positions and specialists in specific stats. As you play, you'll earn card packs containing super rare and ultra rare players with scores of 90 or above. Open these packs to strengthen your team, as having more players in the 90 realm increases your winning potential. Coins earned through gameplay can be used to purchase specific players, making even lower-scoring players valuable additions to your team.
