## 3gp video converter online

Video format MP4 MP4 MP4 MP4, sometimes called MPEG4, is one of the most popular video formats. MP4 is designed for easy playback and distribution. Initially, it was developed by a group of moving images (MPEG), but has become the ISO standard, that is, it is now managed by the International Standardization Organization.

Since the MP4 is a standardized format, it is usually without problems on most devices and media players, including Windows Media Player, Quicktime and VLC. MP4 is usually a popular video download format on YouTube, Vimeo or other websites. The MP4 video consists of compressed videos and audio elements separately. Part of the video is usually compressed using MPEG-4, and the sound is usually compressed using AAC, an audio format associated with iTunes. Since both elements of the file are compressed, MP4 usually has a smaller file size than many other video formats, while maintaining a relatively high quality for exchange on the Internet.
