**POSITION DESCRIPTION – Alfred Health/The Alfred/Caulfield Hospital/Sandringham Hospital**

**Date revised: September 2012**

**POSITION: Pharmacist –Clinical Services**

**AWARD/AGREEMENT: HSU 4**

**CLASSIFICATION TITLE: Hospital Pharmacist Grade II SX2 – SX5**

**DEPARTMENT/UNIT: Pharmacy**

**DIVISION: Medical Services**

**ACCOUNTABLE TO: Senior Pharmacist – Clinical Services**

**ALFRED HEALTH**

Alfred Health is the main provider of health services to people living in the inner southeast suburbs of Melbourne and is also a major provider of specialist services to people across Victoria. The health service operates three outstanding facilities, The Alfred, Caulfield, and Sandringham.

Further information about Alfred Health is available at [www.alfredhealth.org.au](http://www.alfredhealth.org.au)

**OUR VALUES**

Our staff are expected to demonstrate and uphold our values of:

**Integrity, Accountability, Collaboration and Knowledge.**

Our values provide the platform for the way we work and the decisions we make. Through this approach, our Vision and Mission are achieved.

**DEPARTMENT**

The Pharmacy services operate over 4 sites within Alfred Health and involve in training interns, undergraduate and overseas research students. Pharmacists are essential members of all clinical teams and have a critical role in patient management. Their understanding of Pharmacoeconomics, Pharmacology and Medicine Management ensures Alfred Health patients receive the best pharmacy care possible. The service has 3 key priorities:

Medication Safety

Cost effective use of medicines

Delivery of specialist pharmacy expertise at critical points in the patient care pathway

Services have been aligned with the Alfred Health clinical programme structure

# GABRIEL MILLER

745 Lois Lane, Metropolis, TN 37033 | | C: 555.322.7337 | example-email@example.com

## PROFESSIONAL SUMMARY

Patient service-oriented Pharmacist with Doctor of Pharmacy degree and 7 years experience. Strong background in clinical pharmacology and patient medication therapy management. Currently licensed in Tennessee. Excellent track record of maintaining positive relationships with customers, pharmaceutical representatives, manufacturers, medical professionals, healthcare organizations, and insurance providers.

## LICENSES

In good standing with the Tennessee Board of Pharmacy, license #1011.

## SKILL HIGHLIGHTS

- Drug distribution professional
- Expert understanding of Medicare and Medicaid
- Extensive medical terminology knowledge
- HIPAA trained
- Inventory management
- Exceptional patient care and interaction
- Pharmaceutical distribution familiarity
- Medication compounding expert
- Abbreviations comprehension
- Efficient and accurate

## PROFESSIONAL EXPERIENCE

02/2010 to Current

### Staff Pharmacist

Winn Dixie — Metropolis, TN

- Maintain drug inventory levels by ordering necessary medications and supplies, and verifying deliveries against purchase orders.
- Recruit, train, coach, and motivate pharmacy technicians and ensure high levels of customer service and safety are maintained at all times.
- Mixed various pharmaceutical preparations according to written prescriptions.
- Developed work flow procedures to maximize productivity and reduce errors. Eliminated 50% of waste and discovered several billing errors totaling over \$5,000.
- Communicated with all customers and staff in a pleasant and professional manner.

06/2006 to 01/2010

### Associate Pharmacist

Medicine Shoppe Pharmacy — Nashville, TN

- Entered new patient profiles and prescriptions into medication input software system.
- Communicated directly with doctors' offices via telephone, fax and email.
- Provided friendly customer service at prescription drop-off and pick-up counters.
- Worked closely with senior pharmacist and used medication input software to safely and accurately dispense medication.
- Accurately recorded compounded products and prepared appropriate labels.
- Verified patient data and billing information.

## EDUCATION AND TRAINING

2008

### PharmD

University of Tennessee — Memphis, TN

Coursework in Pharmacy Technology, Pharmacology and Pharmacy Law

## COMMUNITY SERVICE

Weekly volunteer at the Hampton House shelter for battered women and children.

Hospital and clinical pharmacy book pdf. Hospital and clinical pharmacy 2nd year. Hospital and clinical pharmacy syllabus. Hospital and clinical pharmacy practical book pdf. While it might be fun for grandchildren to give grandmother and grandfather a clever gift, these special people would also enjoy something else. While there are many gift guides that include ornaments with pictures of grandchildren and family photo frames, there are countless other gifts that you can buy for free. Read more "These are the best traits I look for in a pharmacy technician. Every good pharmacist is a great pharmacy technician. The pharmacy runs more efficiently, staff relations are better, and the patient receives better care with highly effective technicians. Here are the 8 traits I look for in a hospital pharmacy technician: Team player: a team player is willing to go further The normal job description and help with other work roles when there is a deficit in the team. Instead of worrying about what others are doing, this individual has a positive attitude toward helping to serve the patient. Self-control: taking the initiative on completing tasks is a very desirable trait. Note where help is needed and jumping without being told is one of my favorite traits of a good pharmacy technician. Problem solving and critical thinking: improving the process and flow is not only that the pharmacist finds out. Many times, the Technician pharmacy has a unique view on operations that the pharmacist may not recognize. When a nurse calls drug delivery problems as a missing order, a good technician can solve problems and help find solutions before sending the call to a pharmacist. Commitment to Learning: Medicine is a fluid field of study. The guidelines not only change for the patient, but also changes in care and changes in drug delivery. A good technician will be committed to improving things by staying up to date in the field. Service client, conflict resolution and empathy: instead of showing defensiveness and pointing to mistakes with nurses or coworkers, a good technician maySolve and deliver the message in a type of type. He or she can disseminate emotional problems and serve as "going to" for nursing staff when medicine help is needed. Accuracy and focus on a busy environment: Focusing on details with many external stimulus is an advantage! I know of the first-hand experience how difficult it can be, but being able to focus is a feature I find important in a pharmacy technician. Prioritization, organization and time management: When someone on the medical team needs something that is done quickly, being able to prioritize, manage requests and know that time is very important for the workflow. Knowing that a medication is due later in the day and, on the other hand, uploading a medication on the floor that will be necessary above, is part of the prioritization. It is also important to know how to manage the day in which things are not as busy and then up and beyond to perform tasks that are normally at the bottom of the list. Informatic skills: Each technician should know how to work a computer and be able to quickly learn the drug software to help with problems of problems and triaging that can be handled before a pharmaceutical is involved. The daily tasks of a pharmacy technician in a hospital are exclusive to that environment. The pharmacy technical employers can be grouped into 4 main categories: Community Pharmacies (Retail Pharmacies), Specialized Pharmacies, Pharmacies by mail mail and hospital pharmacies. The education and certification requirements for these roles can be the same to a large extent with an additional elication in specific tasks. Based on the work environment. However, the daily tasks of a pharmacy technician in a hospital are exclusive to that environment. You are currently working at a pharmacy or retailer and considering making a career change, or is working for your CPHT certification and are trying to decide what work environment best suits you, it is useful to know some key differences. Here here 5 Exclusive tasks of the pharmacy technicians who work in a hospital setting. Drug Research Service (IDS) Hospital pharmacy technicians assist in all aspects of the management of clinical trials. Working in close collaboration with sponsors, primary researchers, study teams and drug providers, pharmacy technicians help guarantee adhesion to trial guidelines. Research drugs recently using established institutional guidelines and sponsorship requirements. Origin and maintain the specific protocol for the inventory. With IDS Pharmacians to configure and operationalize the new clinical tests. Billing and namine activities. Plaintiff and manage set temperature storage guidelines. MONTHLY METRICS OF LATRACK LABOR ACTIVITIES IDS. HETE with representatives of sponsors to ensure adequate study maintenance and solve the problems that arise and dispenses specific drugs of the protocol after the institutional, and sponsor specific procedures. Summerized patient patient and expired study medication on sponsor and institutional guide. Crete and updating standardized operational procedures for technical roles. Bring new technicians and research pharmacy staff.2. History of medicines The technicians of technical pharmacies can serve the role of a medical history of medicines. In some cases, this is its own role completely, and is met with a certified pharmacy technician. As a technical history of drugs, it is reunited with patients or representatives of income to understand an accurate list of medicines that the patient is currently taking using interviews from structured patients. Open finishing questions to get current patients. Dosage and frequency with the local pharmacy of the patient, safe scripts and other resources that are available. More information and medications updated in the patient's hospital's medical profile. The preparation of sterile and non-sterile compound pharmacy technicians provides supervision and management of the hospital on siteComposition facilities outside the location to maintain and achieve compliance with all the regulatory requirements applicable to the stress and non-stress compounds. The preparation of various stress compounds, such as pediatric chemotheraperable and intravenous medications, requires specific knowledge of techniques and annual embodiments. Annual and semi-annual embodiments fill evaluations of compounds for all employees of Pharmacy participating in stress compounds.Coordination and realization of environmental testing and air sampling for pharmaceutical areas in accordance with the regulations carry out biannual certifications of laminar flow bells and biological safety cabinets.Mantener and update compound compliance records according to the regulatory guidelines. Letterize compound supplies in all compound facilities. Realize on-site training in appropriate technical technique for all new pharmacy employees. CREE and maintain operating procedures. Undar and policies to ensure standardized adhesion in all installed Meeting Regulatory Requirements Create and update videos and training documents to help with composition adherence. Record monthly and annual composition records and personnel composition performance. Help with remedy and / or recycle as necessary. Four. Special medications and methods of administration of a community pharmacy, the techniques work and interact directly with patients who are self-administering medicines at home. In a hospital, the interaction is mostly with medical methods and other professionals, and medications are administered by nurses. Everything from the types of drugs that prepare the pharmacy techniques to the method of administration of medications, it is only in a hospital setting. Welcome medicines to the nursery, the operating rooms and the emergency department. That includes STAT drugs and the daily exchange of drug carts.Ensure that the crash cars are adequately stocked with the medicines required by your institution.Make trays and kits (CPR, transport, etc) and and Anesthesia carts.Specific outfit for certain places (OR, IVR, etc.) drip rounds of valuation and calculations.Manage inventory of automatic dispensing machines.Monitor deviation of controlled substances.5. Acquisition and purchase of pharmacies Hospital pharmacy technicians work with drug wholesalers, pharmaceutical companies and others to acquire the necessary medicines and supplies.Assess the levels of PAR and the minimum levels of reordering to maintain adequate supplies of medicines based on changes and updates of the PUALT committee form.Assess the current shortage of medicines and supplies in the industry and ways to address them. Investigate alternative options for therapy and supplies for extensive scarcity Comply with requests for medicines and supplies from the clinic, laboratory, and satellite pharmacy.Contact the parties involved when supply problems arise, such as shipping and delivery errors and expiration problems. Make sure the drugs are handled and stored properly in transit, particularly cold-chain medicines. Hospital pharmacies and community pharmacies, in many respects, are 2 different Worlds. Some pharmacy technicians start their career in community pharmacies and then move to the hospital setting later to face new challenges and experiences.If you are interested in a career as a pharmacy technician at a hospital or community pharmacy, learn more about how to start your certification process. If you are currently working in the field and are interested in changing the environment of practice, the first step to take is to ensure that your CPHT certification is up to date.
