Our Terms and Conditions have changed. Please take a moment to review the new McDonalds Terms and Conditions by selecting the link. These include updates to our age requirements and the arbitration and dispute resolution process. By continuing to use our website, you agree to the revised Terms & Conditions agreement. For a lot of people, "work from home" doesn't necessarily mean they're working at home. You might take your laptop and set up shop at a Starbucks, or in a cozy corner of your favorite local caf. But there's another option you may not have considered: McDonald's. It's got all the advantages of those other places, plus those delicious hash browns. And the best part? McDonald's Wi-Fi is free.The fast food chain has been offering complimentary Wi-Fi since 2010, using AT&T as its provider. The service iscurrently available at most of its 14,000 locations nationwide. If you want to double-check if your local McDonald's is one of those connected locations and learn more about that specific restaurant's Wi-Fi policy, you can do so on McDonald'swebsite. It only takes a few easy steps to connect to McDonald's Wi-Fi. There are also a few things you can try if you're having issues with its wireless internet, though that shouldn't be too often the company's Wi-Fi is typically more reliable than itsice cream machines. With most of the country's 14,000 McDonald's restaurants offering free Wi-Fi, there's a very good chance there's at least one in your neighborhood where you can connect online. Fortunately, McDonald's makes it very easy to find a location near you (or near somewhere you plan to visit) and confirm if it has Wi-Fi.By using the McDonald's Restaurant Locator on its official website, you can quickly find McDonald's locations in your area by searching zip code, city, or state. You can also turn on your device's location services to find the nearest ones in your actual proximity. To make things easier, you can set a range of five to 50 miles.The McDonald's Restaurant Locator comes with a handful of useful filters, including which locations offer Wi-Fi. By selecting this filter, you'll immediately see all your options if you're looking to dine at a connected McDonald's. There's also a filter to see which locations are open 24/7, in case you plan on burning the midnight oil and using their internet to get some work done overnight. Whether you're using a laptop, Android device, or iOS device, the process for connecting to McDonald's Wi-Fi is the same. The name of the Wi-Fi network will usually be "McDonald's Free Wi-Fi," though sometimes it could be "AT&T," "wayport_access," or some variation of one of these. Follow these steps to join McDonald's network and get online.Open Wi-Fi settings on your device.Find and select the network named "McDonald's Free Wi-Fi," "AT&T," "wayport_access," or something similar.Once connected, open your web browser.Your browser should open to the McDonald's Wi-Fi connection page, where you can find the terms and conditions of internet service. You may need to refresh or open a new page if this doesn't automatically load.Click or tap the "Get Connected" button, which is usually in red and easy to find. Once that's done, you'll have internet access.The entire process should take you less than a minute, and you can be online before your Big Mac is even ready. If you've followed these steps but are having issues accessing McDonald's Wi-Fi, there could be a few different reasons. Some content is blocked or inaccessible on McDonald's Wi-Fi, including torrent sites and adult content. Make sure the website you're attempting to access is allowed by McDonald's internet terms and conditions. Also, make sure you accept those internet terms and conditions in the first place. If you skipped this step when connecting to the network, you won't be able to load outside web pages. If your device prompts you to "Authorize Connection," make sure you click or tap the button.If your connection is slow or spotty, you can try sitting in a different location. Some McDonald's restaurants are pretty big or have second floors, or have eating areas tucked away in various nooks and crannies that make it hard for the Wi-Fi signal to reach your device. The internet router is likely located in an employee-only section of the restaurant, so sitting closer to these or in a more open space may give you a stronger signal. When all else fails, restarting your device and reconnecting to the Wi-Fi will often do the trick.Remember that using any public Wi-Fi always poses some safety risks to your device and privacy. Your OS and any apps you're using should be updated to better protect you from known security flaws in the software, as should your antivirus software if you're using a laptop or Android device. If possible, use a VPN for an added layer of safety. Finally, try and make sure you don't get any ketchup on your device while you're surfing the web. It's not a good look. McDonalds offers Free Wi-Fi internet access at more than 11,500 participating restaurants. Learn how to connect to the McDonalds Wi-Fi to stay connected.How to connect to McDonalds Wi-Fi?Open Settings and Turn on Wi-Fi Connect to the McDonalds Free WiFi Wi-Fi network.A splash screen will open on your browser.Click Connect and you will be connected to the McDonalds Wi-Fi.If McDonalds Free WiFi or Wayport_Access Wi-Fi networks are not available, ask the McDonalds restaurant service crew team members for assistance.How to find McDonalds restaurant with Free Wi-Fi?Go to McDonalds Restaurant Locator.Enter Zip or City & State.Toggle on Filtersand select Wi-Fi from the Services and click Search.You will be shown McDonalds near you.If McDonalds Wi-Fi landing page doesnt pop upIf you are not automatically redirected to the McDonalds Wi-Fi landing page, try one of the following methods:Open a browser and go to any web page such as you will be redirected to the Wi-Fi landing page.If the above method doesnt work, clear your browser cache and open or to Wi-Fi settings and select McDonalds Free WiFi and click Forget This Network and Turn Auto-Join off and try again.How fast is McDonalds Wi-Fi?The internet speed may vary from restaurant to restaurant subject to bandwidth availability.While most restaurants offer Free Wi-Fi, some owner-operators may choose to disable the service and each location may have their own limitations and terms of use. First, go to settings on your mobile device and enable WiFi connection. Then select the network McDonalds Singapore. @McDonaldsWebsite:www.mcdonalds.comHow is your experience with McDonalds Wi-Fi? Let us know in the comments. While you might not always have a coffee shop nearby, chances are you'll be able to find a McDonald's if you need to get some work done on the go. The ubiquitous fast-food chain has offered free Wi-Fi since 2011, and you can still grab some caffeine along with a bite to eat. How to Get Connected with McDonald's Wi-Fi It's pretty simple to log onto the Wi-Fi connection at your nearest McDonald's. The procedure is pretty much the same whether you're using Mac, Windows PC, Chromebook, iPhone, iPad, or Android phone. Find a Location If you're on the road and not sure where the closest restaurant is, you can use the McDonald's locator page. Search by city, state, or ZIP code and head to the nearest location. You'll be able to see a list of features that each location offers. Make sure that the one you're heading to offers Wi-Fi. Most do, but it's possible for owners to shut it off at individual restaurants. Click the drop-down arrow next to "services" and look for the Wi-Fi icon. Other useful information, like operating hours and the address, is displayed next to each result. Even if it's too early (or too late) for the location to be open, you might still be able to connect from the parking lot in an emergency. Connect to the Free Wi-Fi Once you're within range of the network, you'll be able to see it in the Wi-Fi menu of your device. The network name should show up as "McDonald's Free Wi-Fi." Connect to that Wi-Fi network, and a browser window should automatically open to the McDonald's website. Click the "Get Connected" button and a new browser page will load that says "You are connected to McDonald's Wi-Fi. Enjoy!" If a browser doesn't automatically open, try opening a browser window on your computer or the browser app—for example, Safari or Chrome—on your phone or tablet. It should pop up and prompt you to "Get Connected." Note that clicking the connection button means that you accept the terms and conditions of using McDonald's free Wi-Fi. There's a link on the login page if you'd like to read through them. After that, you're connected! Browse for as long as you need to and enjoy your food. There might be a few more things that you're wondering about McDonald's Wi-Fi network like, how fast is it? Is it secure? Are there any browsing restrictions in place? How Fast Is McDonald's Free Wi-Fi? Actually, pretty fast. Your speed will vary depending on the location, but tests using the Fast.com internet speed checking tool have clocked up to 58 megabits per second (Mbps)! That's fast enough to stream Netflix and have multiple other tabs open with no lag. Don't expect that speed at every location, though—it can be as low as 6 Mbps. Is It Secure? Like most public hotspots, McDonald's Wi-Fi network is unsecured. Take appropriate measures to protect yourself online, like using a virtual private network (VPN) and avoiding pages that require you to enter sensitive information. Other security measures that you can take include only visiting sites with HTTPS encryption, which will prevent snooping (If you use Firefox, you can force it to only connect to HTTPS sites.) And as always, be sure to have effective antimalware software running on your Windows computer. Are There Restrictions? There are some restrictions on the free Wi-Fi. Since McDonald's is "family-friendly," you won't be able to access certain content when browsing on their free Wi-Fi network. That includes: pornography some file download sites BitTorrent or media piracy services known malicious or dangerous sites If you're having trouble connecting to the Wi-Fi network, the problem could be the restaurant's router. But there are a few things that you should try before reporting a bad connection to the front counter. Choose the Right Network First, you'll want to make sure that you're connecting to the right network. There might be several network names with "McDonald's" in them. There could also be some that just say "att" or "attwifi," since McDonald's uses AT&T for their Wi-Fi. Choose the network without a lock icon next to it that just says "McDonald's Free Wi-Fi." That's the public connection meant for guests. Try an HTTP Page Sometimes, navigating to a page marked as secure to log in to the network can prompt an error message. To get around that, navigate to a page with "HTTP" in the address and not "HTTPS." This might allow you to log in and return to secure HTTPS browsing afterward. If you need an easy, fast HTTP website to connect to, try example.com. Reset/Restart If the connection still won't work, you can try resetting the wireless connection on your smartphone or device by disabling it, waiting about a minute, and then enabling it again. If that doesn't work, try restarting your device. If none of that helps, you could try a different browser. There are several more technical solutions that you can try if none of the above work, like forcing the browser to display a login page. Software company Auslogics offers some tips for getting a Wi-Fi login page to show up. They work with Windows systems, but some of their solutions might be applicable to Mac. Avoid squatting. Unless it's an emergency, don't sit for hours in the parking lot or restaurant using the free Wi-Fi connection without making at least a small purchase. Buying even a cup of coffee is good etiquette.
