Here are some tanning bed repair videos of some reoccuring problems and questions I have seen in my many years of being a tanning bed technician. Do not be afraid if you do not have electrical experience. Just use common sense of not touching electrical experience. the repair. The majority of tanning beds on the market have technical issues or not. All our videos on Timer systems like Tmax, Intellitan and Tantime, we have dedicated a page to by themselves. Look in the top bar and find Videos for Tmax, Intellitan and Tantime and click it. This is a section I strongly recommend to watch in advance before you encounter the problems. The reason is the timer system is the heart of the salon, so everything is likely stop if the salon software malfunctions, and therefore likely to cause a slight bit of hysteria that can block learning on the spot. How to troubleshoot a lamp out- on a choke ballast system, which is the most common used to get bewildred about what I have checked so far, and thats why I came up with a slow and steady road to success. Tanning bed lamps or bulbs and how to make them last longer. If you have interest in saving money on lamps, you need to watch this. Most tanning beds I have encountered do not have optimal conditions to last. See what matters here: The video below shows how to disinfect the acrylic effectively, with in this case lucasol. Getting the mix of lucasol right is important, so it has the desired effect without giving a allergic reaction. How to program a most Sundash or Ergoline timers. Sometimes the program can be messed up by the network, or simply if you are installing a new timer, you will need to know how. How good is the old Sundash 232? Well I think its a tank but its not young anymore, watch the video to get some heads up if you looking to pick one of these up. Image not available forColor: To view this video download Flash Player One of our most frequent telephone requests is for tanning bed repair manuals, assembly instructions, or wiring diagrams. Although they are scarce for many reasons, we have attempted to compile many of the most common manuals here in PDF format for your convenience. Keep in mind, these are trademarked by the respected companies and are not to be reprinted or resold but for personal use only. If any manufacturer would like their manuals removed this page, please email us a request here. The objective here is to reduce the mundane phone calls to the service departments of the top indoor tanning companies who are very busy with used equipment. Making this collection available should reduce the burden on service calls. We are the manufacturer of Royal Sun, Sunal, Perfect Tan, Tropical Rayz, and South Beach brands. Click on the icon to view or download each indoor tanning salon equipment manual, instructions, or operating guide found below. Please call for more manuals or share your digital copy manual with everyone by emailing us here. For more detailed information and for a large selection of tanning bed manuals please visit our manual and assembly instruction specific webpage. We sell tanning bed parts for ACN Solart, Alisun, Alpha Sun, HEX, Hollywood Tan, ITS, JK Ergoline, JK Soltron, Kettler, Klafsun, Klaus, Leisure Bay, Sunliner, Mega Max, Mega Sun, Montego Bay, Ovation, Pro Sun, Puretan, Royal Sun, ScA, Shaw, Silver Solaria, Sonnenbraune, Sontegra, Sportaredo, Star Power, Sun Dash, Sun Daszler, Sun Vision, Sunal, Tan America, Tanses, Wolff, Ultra Bronze, UWE, Velocity, Vita Sun just to name a few. Troubleshooting Guide For SunMaster, Alpha Sun and Virtual Sun Tanning bed is backed by the most comprensive warranty in the industry but even the best tanning bed and should help the home tanning bed owner deal with most problems without having to call for service. These answers deal with home tanning beds in general, but more specifically to the models above. Bed will not turn on at all. Timer will not count down. Lamps try but fail to start, or start slowly Ends of lamps are black. One or more lamps do not work. Two or three lamps in a row quit working. Half the tanning bed (bench or canopy) will not work. The top of the tanning bed won't stay up (or down) My tanning bed is hotter than it used to be. I am not getting very tan Acrylics are cracked or hazy My tanning bed is hotter than it used to be. I am not getting very tan Acrylics are cracked or hazy My tanning bed is hotter than it used to be. I am not getting very tan Acrylics are cracked or hazy My tanning bed is hotter than it used to be. the cause in most cases. Make sure the breaker is in the ON position. Make sure you are turning the timer enough to start the system. If the tanning bed also has a power switch, make sure it is in the ON position, and try both positions just to be sure. Make sure all the connections from the bench to the canopy (and to the air cooling bar if so equipped) are connected tightly. Some tanning beds will not operate unless all the panels are in place and the bed is fully assembled and in the closed position, so read your owners manual and see if you have these safety devices. Make sure the bed is fully assembled and in the closed position, so read your owners manual and see if you have these safety devices. similar plug in device to the outlet and plug it in to test it. If it doesn't work, then the problem isn't the tanning bed. If you are familiar with a volt meter and have one handy, make sure there is power getting to the socket. Timer will not count down. If your tanning bed has an analog timer (twist knob style) make sure you turn it passed 5 minutes, then roll it back to the proper time if under 5 minutes. Make sure the knob is not pressed so hard into the tanning bed that it is jammed against the body of it. If your tanning bed has a digital timer, make sure you have selected the proper minute session and pressed the START button. Lamps try but fail to start, or start slowly Usually, this is due to low voltage. If you have a 230VAC tanning bed, make sure that the available voltage is at least 215VAC (preferabley 220 to 230VAC) with no load. If you have a 120VAC tanning bed, the voltage should be at least 110VAC (preferably 115-125VAC). If your incoming voltage is correct, the likely problem is insufficient wiring, ie: the gauge of the wire will show 120VAC with no load, but drop to 95VAC when the tanning bed is on. (This can be tested with a volt meter) This is a dangerous situation and should be corrected by a licensed electrician. Ends of lamps are black. This is normal and will not affect the tanning of the lamp appreciably if the lamps are not older than 2/3rds of their rated life. Some installations seem to turn lamp ends dark after a few weeks, others do not, but the UV output of the lamps should be fine. One or more lamps do not work. If the tanning bed, remove the acrylic and reseat the lamp. While you are inside the tanning bed, remove the acrylic and reseat the lamp. having to go back inside in a few minutes). Once in a great while, the shipping process will actually cause a wire to come loose at the ends of the lamp out with a good lamp out the lamp is fine. NEXT try swapping out the Lamp Starters (230VAC beds only) to see if that is the problem. The lamp starter is the small cylinder located on one end of the lamp on tanning beds that use European electronics. Just twist 90 degrees to remove, and swap with a known good starter from the tanning bed to see if that fixes the problem. If this doesn't fix the problem then you will need to check the wires coming into the ends of the lamps (after turning off power...). This can usually be done by anyone mechanically inclined and you can always call 1-800-274-1744 for detailed instructions on how to perform this task. If the tanning bed is not new, try the methods above to determine (or rule out) the problem being seating, lamp, starter or wire. If the tanning bed uses 230VAC European ballast (choke) there is the remote possibility that a ballast has gone bad. Two or three lamps in a row quit working. If the tanning bed is new, it could be caused by lamp end vibration from shipping (see above) or a wire from the ballast came loose. Use the methods above to determine if it is a loose or defective lamps first. If your tanning bed is 230VAC European choke ballast equipped, it could be the return wire on the end of the lamp starter. Often, 3 lamp ends are chained together for the return voltage, so if a wire is not connecting, it will prevent 1, 2 or 3 lamps from working, depending on where the break is. Often, you just need to restab the wire, or restrip and restab the wire to fix the problem. If your tanning bed is 120VAC then you either have a wire loose from one of the ballasts (usually the "yellow" wire that goes to the lamp ends) or a bad ballast. Use the methods above to help determine the problem. Half the tanning bed (bench or canopy) will not work. The majority of the time this occurs it is because the cable that connects the bench to the canopy is not plugged in properly, or the receptical end (that you plug the bed half into) is defective. On 230VAC beds, it could be due to a defective contactor (relay) or timer, if it uses a dual pole timer (MS-65). Once in a blue moon, it will be because of a bad wire connection in one of the bed halves at the bed cord. The top of the tanning bed won't stay up (or down) This is a hydraulic cylinder problem, obviously, but before you assume a cylinder is bad, insure you have it installed properly. The body portion of the cylinder (the fat part) could be up and the skinny part down when installing them. Insure you have them installed properly before replacing. Most cylinders are designed to be either open or closed, but not to "stick" in any position inbetween. My tanning bed itself, and that the vent holes and fan intake holes are not blocked by any object or dust. Most tanning beds need a few inches from any air input or output to ensure proper ventilation. Turn the bed on and visually inspect the individual fans to make sure they are spinning when the bed is energized. Replace any defective system fans immediately to prevent damage to the electronics. If you find build up in the air intakes or exhaust on the tanning bed, it is probably a good idea to buy a Tanning bed is new: Make sure you are following the instructions that came with your tanning bed regarding exposure times. If you have dry skin or get dry skin from using a tanning bed, be sure to use indoor tanning lotion and/or approved moisturizer regularly. Remember: when your tanning bed for a while, try using a Tanning Bed Rebuild Kit and recondition your acrylics. Reconditioning often allows 20% to 40% MORE UV to penetrate and be delivered to you. You should use this kit (it has enough product for several applications) every time you change your lamps and at LEAST one time in between lamp changes. For best results, the average home tanning bed should be cleaned inside using the kit about once per year. Acrylics are cracked or hazy Hazy or fogged acrylics are usually due to the customer using the WRONG cleaner on the tanning bed. Your acrylics are very sensitive to cleaning agents, and as such, you should ONLY use approved disinfectants that are designed specifically for tanning bed acrylics. Not only will they protect your acrylic, but it is cheaper than glass cleaners. Glass cleaners and other household chemicals WILL RUIN YOUR ACRYLICS. If you have been using glass cleaners or similar chemicals on your tanning Bed Rebuild kit, along with the proper acrylic cleaner) to strip BOTH SIDES of your acrylics. If this doesn't work, you will need to replace them. If your acrylics are cracked, they should be replaced. This will prevent any potential injury. This is especially true with bench acrylics, since you lie directly on them. Tanning bed is tripping my breaker If this is a new tanning bed, more than likely, you are running the tanning bed on too small a circuit and the excessive heat and extra power requirements are causing the breaker to trip. You need to insure that the circuit the tanning bed is connected to is of the correct voltage and amperage for your tanning bed. It is acceptible to run a tanning bed is connected to is of the correct voltage and amperage for your tanning bed. damage to the tanning bed. If your tanning bed is NOT new, and this is a recent development, AND there are no other issues with your tanning bed, then the problem is likely the breaker tripping at a level that is too low for its rated amperage. Have an electician look at and replace the breaker if you think this is the problem. If you're a first-time tanner, the process can be a bit confusing. You may be worried that you haven't moisturized your skin enough or you might not know how to lay in a tanning bed and which are the best positions so that you don't get tan lines. The most surprising thing is not most tanners know the perfect tanning bed for tanning bed for tanning it's important to know how to lay in a tanning bed for tanning it's importance of proper posture during indoor tanning. Different tanning bed laying positions Getting an uneven tan is very embarrassing and it's even worse if you glowing tan starts to break up because of undesired creases or underexposed skin. Although tanning beds are a guick and very convenient way of achieving a golden glow, poor positioning in a tanning bed skin. cause you a lot of stress trying to fix the areas that haven't been properly tanned. Here are some tanning bed position, but it's important that you lay on your belly to avoid getting creases on your backside. This is how you lay on your stomach. Use both of your hands to form a pillow and rest your chin over it. This will ensure that your neck gets properly tanned and also your wrists and other parts of your hands. Rest your feet have very little contact with the tanning bed surface and your feet get an even tan. Your knees also get a chance to get a tan. Avoid moving a lot because you will get tired faster not to mention laying on your stomach is already tiring and boring. On your back This is the easiest and most common tanning bed position, but you're more likely to get a tan. very comfortable and preferred tanning position, a big part of your body doesn't get exposed to UV rays and no matter how hard you try there will be some parts of your back. Here is how you can properly lie on your back. Here is how you can properly lie on your back. Here is how you can properly lie on your back and raise your back. knees slightly so that they're higher than your body. Try resting your feet on your heels so that you expose the soles of your feet to tanning to avoid looking ugly when you're wearing your slip-on. If you're comfortable, fold your arms behind your heed or rest your arms behind your heels so that you expose the soles of your feet to tanning to avoid looking ugly when you're wearing your feet to tanning to avoid looking ugly when you're wearing your feet to tanning to avoid looking ugly when your heels so that you expose the soles of your feet to tanning to avoid looking ugly when you're wearing your feet to tanning to avoid looking ugly when you're wearing your feet to tanning to avoid looking ugly when you're wearing your feet to tanning to avoid looking ugly when you're wearing your feet to tanning to avoid looking ugly when you're wearing your feet to tanning to avoid looking ugly when you're wearing your feet to tanning to avoid looking ugly when you're wearing your feet to tanning to avoid looking ugly when you're wearing your feet to tanning to avoid looking ugly when you're wearing your feet to tanning to avoid looking ugly when you're wearing your feet to tanning to avoid looking ugly when you're wearing your feet to tanning to avoid looking ugly when you're wearing your feet to tanning to avoid looking ugly when you're wearing your feet to tanning to avoid looking ugly when you're wearing your feet to tanning to avoid looking ugly when you're wearing your feet to tanning to avoid looking ugly when you're wearing your feet to tanning to avoid looking ugly when you're wearing your feet to tanning to avoid looking ugly when you're wearing your feet to tanning to avoid looking ugly when you're wearing your feet to tanning to avoid looking ugly when you're wearing your feet to ensure that the sides of your body aren't left untanned because of your arm's shadow. Occasionally switch positions by shifting your weight to either side to you're a first-time tanner or you're not familiar with the type of tanning bed. Some tanning beds have control buttons for the fan and separate bed bulbs that you can turn on and off. You may also be required to close the lid of the tanning bed before tanning on the machine that is why you need to know how all these things function before laying on the tanning bed. Locate your Timer Not all tanning salons will have a staff member coming to remind you when to turn your body during the tanning session. Most of the standard tanning beds have a timer on the inside that you can use to monitor your session. Remove the Pillow will cover your neck when tanning which will result in tan lines and a white strip on your neck. Put your legs up to avoid butt moons. This happens when the skin on your thighs to form creases on your thighs to form creases on your thighs to form creases on your thigh and butt, these are called butt moons. This happens when the skin on your neck. through. Raising your legs and bending your knees will help in preventing this from happening. This way your skin stretches out to get an even tan all over. Use goggles like the ones above. You must wear eye protection because our eyes and eyelids are very sensitive to UV light and if the rays penetrate your eyelids they can cause serious damage to your eyes. You also want to avoid getting raccoon eyes by adjusting the goggles during the tanning session occasionally so that they don't stay in one position for too long. Make sure that when adjusting the goggles they continue to cover your eyelids. A good tanning goggles like Flexible Super Sunnies will not only keep your eyes safe(as its FDA approved) but also is really light on your wallet. You can check it below Stretching during your tanning session ensures that all parts of your skin get exposed so you get an even tan. If you rest your arms for too long close to your body you can get an uneven tan. Avoid lying in one position for too long especially when you're lying flat with your arms too close to the sides of your body. Lie on your body you can get an uneven tan. tan lines. Switch positions after some time and place your arms above your head so that the skin on your arms and legs get exposed and spread your arms and legs get exposed and spread your arms and legs apart. Stretching allows more UV rays to penetrate your skin in less time so the more space you allow, the more radiation sets in resulting in a deep, darker tan that will last longer. Turn on your Stomach To ensure your skin gets evenly exposed, turn and lie on your stomach halfway through your tanning session. It can be a bit uncomfortable, but lying on your stomach spread your arms on your stomach halfway through your arms occasionally. You can also bend your arms to support your sides after some time. Lie on one side and the other for an even tan. Shift Sides To ensure that your sides after some time. Lie on one side and the other for an even tan. getting tan lines. Remember to Tan your Neck Tanning salons provide you with a pillow in every tanning bed, but you would be better off without it. The pillow and make sure the area around your neck gets enough UV exposure if you don't want to get a white strip on your neck. Wait before Taking a Bath You should wait at least 3-4 hours after your tanning session, your tan can become dull or have blotchy marks. Moisturize Tanning beds can change the condition of your skin, so remember to apply a moisturizing lotion after your tanning session like the one we recommend above. This will help your skin to recover from exposure to UV light. Get a lotion that contains extra vitamins and coconut oil that have natural benefits that are good for your skin. How to Ensure that Different Parts of your Body get an Even Tan The main aim when you visit a tanning booth is to get an even tan all over your body. The tanning process can take a lot of your time and you can only get the desired results if you do it right. An uneven tan is a very common issue, but there are ways of ensuring that different parts of your body. difficult. You just lie on your back and wear tanning goggles so that you don't end up damaging your eyes. A common complaint about tanning session to ensure that the UV rays don't concentrate on one particular part of your face. Neck and Shoulders If you're a woman, your hair can hinder you from properly tanning your neck. To prevent this, tie your shoulders also need to be exposed to UV radiation. Lie on your stomach and support your chin with your hands to allow your shoulders to get a good tan. Back Tanning your back will require you to lie on your stomach. Tanning your back isn't difficult because this is the largest part of your body, you need to lie on the flat of your back. These parts are easy to apply tanning lotion, so they won't be a problem tanning. Legs and Thighs To ensure that you get an ever tan on your legs and thighs, there are a few steps you need to follow. As you're lying flat on your back, the down part of your thighs isn't getting exposed to UV radiation. To get your all your legs and thighs tanned all at once, you need to toss and turn a bit. You can raise your legs when lying on your back and bend your knees a little leaving only your heel touching the tanning bed. When lying on your belly, use your toes to ensure that your legs and thighs don't touch the tanning bed. Groin To tan your groin you will need to lie on your belly, use your toes to ensure that your legs and thighs don't touch the tanning bed. When lying an acute angle with your legs and thigh this part of your body by just lying on your back and spreading your legs wide apart. Buttocks is very complicated. It's very easy for you to get butt moons because the skin in your buttocks overlaps over your thighs which is a result of lying on your back for too long. This is most likely going to happen unless you flip and lie on your stomach a few times during your tanning session. You can lie flat on your stomach and flex your hips. Feet It's not hard to tan your feet upright and only let the hind part of your feet to touch the tanning bed. Conclusion To avoid complaining about an uneven tan, tan lines, and butt moons, you must know how to lay on a tanning bed and the proper tanning positions that will ensure you achieve an even tan with that golden glow you want. It's also important that you use a quality tanning lotion because the results will also depend on the quality of the product you use. tanning to avoid burning your skin. Remember not to stay in the tanning bed for too long, hydrate, and keep your skin well moisturized throughout your tanning bed Best Exfoliator before Spray tan & How to Exfoliate Here is a free helping hand to your Tanningbed questions and trouble. We have gathered around 9GBs of documentation in tanning, and like to help. This first link here below, is a link to our database of manuals that will first appear, then it will take you to the many brands we service. Click on the folder with the brand you would like and you can download or view any document you see in there, and this you can do from basically any device. Troubleshooting Guide For SunMaster, Alpha Sun and Virtual Sun Tanning Beds Your new tanning bed is backed by the most comprensive warranty in the industry but even the best tanning bed needs maintenance or a spare part once in a blue moon. This guide covers many of the most common issues with just about any tanning bed and should help the home tanning bed in general, but more specifically to the models above. Bed will not turn on at all. Timer will not count down. Lamps try but fail to start, or start slowly Ends of lamps are black. One or more lamps in a row quit work. Two or three lamps in a row quit work. The top of the tanning bed (bench or canopy) will not work. The top of the tanning bed (bench or canopy) will not work. The top of the tanning bed won't stay up (or down) My tanning bed won't stay up (or down) My tanning bed is hotter than it used to be. I am not getting very tan Acrylics are cracked or hazy My tanning bed is tripping my breaker Bed will not turn on at all. New tanning beds: Make sure it is plugged in. Believe it or not, that is the cause in most cases. Make sure it is in the ON position. Make sure it is in the one at all of the tanning bed also has a power switch, make sure it is in the one at all of the tanning bed also has a power switch. the ON position, and try both positions just to be sure. Make sure all the connected tightly. Some tanning beds will not operate unless all the panels are in place and the bed is in the CLOSED position, so read your owners manual and see if you have these safety devices. Make sure the bed is fully assembled and in the closed position and try again. If the tanning bed is 120V powered, try moving a lamp or similar plug in device to the outlet and plug it in to test it. If it doesn't work, then the problem isn't the tanning bed. If you are familiar with a volt meter and have one handy, make sure there is power getting to the socket. Timer will not count down. If your tanning bed has an analog timer (twist knob style) make sure the knob is not pressed so hard into the tanning bed that it is jammed against the body of it. If your tanning bed has a digital timer, make sure you have selected the proper minute session and pressed the START button. Lamps try but fail to start, or start slowly Usually, this is due to low voltage is at least 215VAC (preferabley 220 to 230VAC) with no load. If you have a 230VAC tanning bed, make sure that the available voltage is at least 215VAC (preferabley 220 to 230VAC) with no load. If you have a 230VAC tanning bed, make sure that the available voltage is at least 215VAC (preferabley 220 to 230VAC) with no load. a business building) then you will need a buck/boost transformer to boost the voltage to a proper level. If you have a 120VAC tanning bed, the voltage is correct, the likely problem is insufficient wiring, ie: the gauge of the wire to the circuit is too small. Often, a tanning bed needing 20AMP service, but run on 14ga wire will show 120VAC with no load, but drop to 95VAC when the tanning bed is on. (This can be tested with a volt meter) This is a dangerous situation and should be corrected by a licensed electrician. Ends of lamps are black. This is normal and will not affect the tanning of the lamp appreciably if these delectricians. lamps are not older than 2/3rds of their rated life. Some installations seem to turn lamp ends dark after a few weeks, others do not, but the UV output of the lamps should be fine. One or more lamps do not work. If the tanning bed is new, this usually means a lamp has vibrated loose in the shipping process. Turn off all power to the tanning bed, remove the acrylic and reseat the lamp. While you are inside the tanning bed, make sure all the other tanning lamps are seated properly as well (to prevent having to go back inside in a few minutes). Once in a great while, the shipping process will actually cause a wire to come loose at the ends of the lamp. If all the lamps are seated properly but a lamp doesn't work, FIRST swap the bad lamp out with a good lamp and see if the problem is the lamp itself. If the "bad" lamp works in another socket, then the lamp is fine. NEXT try swapping out the Lamp Starters (230VAC beds only) to see if that is the problem. that use European electronics. Just twist 90 degrees to remove, and swap with a known good starter from the tanning bed to see if that fixes the problem. If this doesn't fix the problem then you will need to check the wires coming into the ends of the lamps (after turning off power...). This can usually be done by anyone mechanically inclined and you can always call 1-800-274-1744 for detailed instructions on how to perform this task. If the tanning bed is not new, try the methods above to determine (or rule out) the problem being seating, lamp, starter or wire. If the tanning bed uses 230VAC European ballasts (choke) there is the remote possibility that a ballast has gone bad. Two or three lamps in a row quit working. If the tanning bed is new, it could be caused by lamp end vibration from shipping (see above) or a wire from the ballast came loose. Use the methods above to determine if it is a loose or defective lamps first. If your tanning bed is 230VAC European choke ballast equipped, it could be the return wire on the end of the lamp that does NOT have the lamp starter. Often, 3 lamp ends are chained together for the return voltage, so if a wire is not connecting, it will prevent 1, 2 or 3 lamps from working, depending on where the break is. Often, you just need to restab the wire, or restrip and restab the wire, or restrip and restab the wire is not connecting, it will prevent 1, 2 or 3 lamps from working, depending on where the break is. wire loose from one of the ballasts (usually the "yellow" wire that goes to the lamp ends) or a bad ballast. Use the methods above to help determine the problem. Half the tanning bed (bench or canopy) will not work. The majority of the time this occurs it is because the cable that connects the bench to the canopy is not plugged in properly, or the receptical end (that you plug the bed half into) is defective. On 230VAC beds, it could be due to a defective contactor (relay) or timer, if it uses a dual pole timer (MS-65). Once in a blue moon, it will be because of a bad wire connection in one of the bed halves at the bed cord. The top of the tanning bed won't stay up (or down) This is a hydraulic cylinder problem, obviously, but before you assume a cylinder is bad, insure you have it installed properly. The body portion of the cylinders are designed to be either open or closed, but not to "stick" in any position inbetween. My tanning bed is hotter than it used to be. Check to make sure you are getting proper ventilation. Turn the bed on and visually inspect the individual fans to make sure they are spinning when the bed is energized. Replace any defective system fans immediately to prevent damage to the electronics. If you find build up in the air intakes or exhaust on the tanning bed, it is probably a good idea to buy a Tanning Bed Rebuild Kit and clean the entire inside of the tanning bed, it is probably a good idea to buy a Tanning Bed Rebuild Kit and clean the entire inside of the tanning bed, it is probably a good idea to buy a Tanning Bed Rebuild Kit and clean the entire inside of the tanning bed, it is probably a good idea to buy a Tanning Bed Rebuild Kit and clean the entire inside of the tanning bed, it is probably a good idea to buy a Tanning Bed Rebuild Kit and clean the entire inside of the tanning bed, it is probably a good idea to buy a Tanning Bed Rebuild Kit and clean the entire inside of the tanning bed, it is probably a good idea to buy a Tanning Bed Rebuild Kit and clean the entire inside of the tanning bed, it is probably a good idea to buy a Tanning Bed Rebuild Kit and clean the entire inside of the tanning bed, it is probably a good idea to buy a Tanning Bed Rebuild Kit and clean the entire inside of the tanning bed, it is probably a good idea to buy a Tanning Bed Rebuild Kit and clean the entire inside of the tanning bed, it is probably a good idea to buy a Tanning Bed Rebuild Kit and clean the entire inside of the tanning bed, it is probably a good idea to buy a Tanning Bed Rebuild Kit and clean the entire inside of the tanning bed, it is probably a good idea to buy a Tanning Bed Rebuild Kit and clean the entire inside of the tanning bed, it is probably a good idea to buy a Tanning Bed Rebuild Kit and clean the entire inside of the tanning bed, it is probably a good idea to buy a Tanning Bed Rebuild Kit and clean the entire inside of the tanning bed, it is probably a good idea to buy a Tanning Bed Rebuild Kit and clean the entire inside of the tanning bed, it is probably a good idea to buy a Tanning Bed Rebuild Kit and clea bed. I am not getting very tan If your tanning bed is new: Make sure you are following the instructions that came with your tanning bed, be sure to use indoor tanning bed regarding exposure times. If you have dry skin or get dry skin or g tan that is coming off. If you have had your tanning bed for a while, try using a Tanning Bed Rebuild Kit and reconditioning often allows 20% to 40% MORE UV to penetrate and be delivered to you. You should use this kit (it has enough product for several applications) every time you change your lamps and at LEAST one time in between lamp changes. For best results, the average home tanning bed should be cleaned inside using the kit about once per year. Acrylics are usually due to the customer using the WRONG cleaner on the tanning bed. Your acrylics are very sensitive to cleaning agents, and as such, you should ONLY use approved disinfectants that are designed specifically for tanning bed acrylics. Not only will they protect your acrylic, but it is cheaper than glass cleaners and other household chemicals WILL RUIN YOUR ACRYLICS. If you have been using glass cleaners are designed specifically for tanning bed, try using the Novus #2 (found in the Tanning Bed Rebuild kit, along with the proper acrylics. If this doesn't work, you will need to replace them. If your acrylics, since you lie directly on them. Tanning bed is especially true with bench acrylics, since you lie directly on them. tripping my breaker If this is a new tanning bed, more than likely, you are running the tanning bed on too small a circuit and the excessive heat and extra power requirements are causing the breaker to trip. You need to insure that the circuit and the excessive heat and extra power requirements are causing the breaker to trip. to run a tanning bed on a circuit that is LARGER than the rating for the tanning bed, but never for a SMALLER circuit. This can lead to overheating, fire and damage to the tanning bed, then the problem is likely the breaker itself. They do wear out, and when they do, one of the most common signs is the breaker tripping at a level that is too low for its rated amperage. Have an electician look at and replace the breaker if you think this is the problem. Our available tanning bed manuals, tanning bed manuals, tanning bed manuals are listed below. If a manual link listed below is the problem. not working, please chat with Amanda to have the manual link updated. If you have questions regarding replacement tanning hed with hybrid tanning red light lamps, new acrylic, retrofitting your tanning bed with hybrid tanning hed with red light lamps, new acrylic, retrofitting your bed with hybrid tanning hed bed with hybrid tanning hed with red light lamps, new acrylic, retrofitting your tanning hed with hybrid tanning hed with hybrid tanning hed with hybrid tanning hed with hybrid tanning hed bed with hybrid tanning hed with hybrid tanning hed with hybrid tanning hed bed with hybrid tanning hed with hybrid tanning hed with hybrid tanning hed bed with hybrid tannin info@suntanningstore.com or online chat. When you sit down, the canopy is lowered smoothly and rests gently above it. After the sunbathing, the canopy can be raised again without any effort. This is all thanks to the shock absorbers hidden underneath that smoothly and safely raise or close the bathing bed.GASTAC, a leading Chinese tanning bed shocks manufacturer, offers advanced production technology and a skilled manufacturing team. For custom stainless steel gas springs, contact sales@gastac.com. For standard tanning bed gas strut specifications, visit the GASTAC online store for easy purchasing and reliable solutions.GASTAC Tanning Bed Shocks provide reliable canopy support, ensuring smooth and safe operation. They are designed as replacement shocks, compatible with major tanning bed brands like Wolff and Sunquest. These shocks maintain consistent lifting and lowering, enhancing user comfort. GASTAC focuses on durability, offering a long-lasting solution for tanning bed maintenance. Below are the brands or models of Tanning Bed Shocks that GASTAC can replace: Check your existing tanning bed has a label on the back that will show the brand, model and year of the tanning bed.-If you don't see the model you need, we have a variety of gas struts available, so please contact us directly. Tanning bed shocks, are components used to support the opening and closing of the canopy (the top part) of a tanning bed. They provide the necessary force to help lift and lower the canopy smoothly and safely, preventing sudden slamming or difficulty in handling. Assisted Lifting: Tanning bed struts reduce effort to lift the heavy canopy. Controlled Closing: They slow the canopy's descent to prevent slamming. Safety: Tanning bed gas springs stop the canopy from closing too quickly, reducing injury risk. Replacement: Replace worn tanning bed struts to keep the bed operating smoothly and safely. To choose the right size tanning bed shocks, measure the length of the old shocks when extended. Check weight requirements for the canopy, as shocks are rated by force (in pounds). Match mounting hardware type and orientation, and select gas springs that match original specifications for smooth operation. Tanning bed shocks, or gas springs, typically need replacement when it starts to sag or close unexpectedly. Here are some key indicators for when to replace tanning bed shocks: Reduced Lifting Power: If the canopy struggles to stay open or needs extra force, the shocks are likely weakening. Wear Signs: Rust, oil leaks, or damage mean it's time to replace them. Noisy Movement: Squeaks or grinding sounds suggest worn parts. Typical Lifespan: Shocks last 3-5 years but may vary with use and humidity. Gas springs are integral components in many devices, including tanning beds, where they help manage the smooth opening and closing of the bed's canopy. However, once gas springs lose pressure or start showing signs of wear, they cannot be repaired and must be replaced. This is because the internal gas chamber, which provides the necessary force, can no longer function effectively once compromised.PRECAUTIONS: In the context of tanning beds, which often rely on two tanning bed gas springs for balanced operation, it's essential to replace both springs simultaneously, even if only one has failed. Replacing just one can lead to uneven support, causing additional strain on the new spring and the bed's structure. Over time, this imbalance can result in further issues, such as misalignment, increased wear, and potentially even safety hazards. By replacing both gas springs at the same time, you ensure that the tanning bed operates smoothly and maintains its structural integrity, providing a safe and consistent user experience. We offer one of the most extensive selections of gas springs, shocks, and lifts in the industry. Our inventory includes shocks, struts, and springs compatible with a wide range of tanning bed brands, such as American Quality MFG, ACN Solart, Alisun, Atlantis, Soltron, , Dr. Muller, Electric Sun, ESB, Forever Tan, Garda Sun, HEX, Hollywood Tan, ITS, JK Ergoline, JK Soltron, Kettler, Klafsun, Klaus, Sunliner, Mega Max, Montego Bay, Pro Sun, Royal Sun, SCA, Shaw, Silver Solarium, Solana, Solaris, Sonnenbraune, Sontegra, Sportaredo, Star Power, Sun Dash, Sun Dazzler, Sun Industries, Sun Ouest, Sun Star, Sun Vision, Sunal, Tan America, Tanses, Wolff, Ultra Bronze, UWE, Velocity, Vita Sun, and many more.
