PojavLauncher for playing Minecraft JE - make your time in Minecraft easier with a handy assistant! Want to experiment with textures, new items, and worlds? Welcome, you've come to the right place. Everything you need is in one place, just choose what you want, download resources, install and use. Any version of the game and the size of the buttons for controlling the character are available. Visit a variety of servers with interesting modes and customize the app for easy use to always win.How to install PojavLauncher Minecraft JE?After installing and launching the app, you will be prompted to enter your Minecraft account details. If you have a license, you can use your account to log in.If you do not have a license, enter your nickname in the Username field, check the Login as a offline account and click the Login button.After that, the main menu will open, where you can launch the game itself.Here you will need to select the update version to run.Old alphas and old betas will be enabled in the launcher settings.After selecting a version and clicking on the Play button, the download of the update will begin. You will need to wait and this is done only once, but other versions will have to be downloaded separately separately.The launcher will automatically launch the game immediately after downloading all the necessary data.How to get Minecraft JE APK for free?Download the apk file below follow the instructions in the description. ApkVision.com From Boardwalk's ashes here comes PojavLauncher! PojavLauncher is a launcher that allows you to play Minecraft:Java Edition on your Android device! It can run almost every version of the Minecraft, allowing you to use .jar only installers to install modloaders like forge, fabric, optifine; hack clients like LabyMod and much more! For more details check out our wiki Some notes to start with We do not exist on TikTok. No one from the dev team makes TikTok videos. The official Twitter for PojavLauncher is @PLaunchTeam. Any others (most notably @PojavLauncher) are fake, please report them to Twitter's moderation team. Navigation Introduction PojavLauncher is a Minecraft: Java Edition launcher for Android and iOS based on Boardwalk. This launcher can launch almost all available Minecraft versions ranging from rd-132211 to 1.19 snapshots (including Combat Test versions). Modding via Forge and Fabric are also supported. This repository contains source code for Android. For iOS/iPadOS, check out PojavLauncher iOS. Getting PojavLauncher Getting PojavLauncher is divided into 3 parts. Building If you want to build after launcher code changes, follow the steps below. Java Runtime Environment (JRE) JRE for Android is here, and the build script is here. Follow build instruction on build script README.md. You can also get CI auto builds if you are lazy or failing it for some reason. Either get jre8-pojav artifact from auto builds, or do splitting by yourself: Get JREs for all of 4 supported architectures (arm, arm64, x86, x86_64) Split JRE into parts: Platform-independent: .jar files, libraries, configs, etc... Platform-dependent: .so files, etc... Create: A file named universal.tar.xz with all platform-independent files 4 files named bin-.tar.xz with all platform-dependent files per-architecture Put these in assets/components/jre/ folder (If needed) update the Version file with the current date LWJGL The Launcher Because languages are auto added by Crowdin, you need to run language list generator before building. In the project directory, run: chmod +x scripts/languageelist.updater.sh bash scripts/languageelist.updater.sh scripts/languageelist.updater.bat Then, run these commands or build using Android Studio. ./gradlew -jre lwjgl3glfw:build ./gradlew -app pojavlauncher:assembleDebug (Replace gradlew to gradlew.bat if you are building on Windows). Current status OpenJDK 9 Mobile port: ARM32, ARM64, x86, x86_64. Replaced by JRE8. OpenJDK 8 Mobile port: ARM32, ARM64, x86, x86_64 OpenJDK 17 Mobile port: ARM32, ARM64, x86, x86_64 Mod installer headless Mod installer with GUI. Used Caciocavallo project for AWT without X11. OpenGL in OpenJDK environment OpenAL (works on most devices) Support for Minecraft 1.12.2 and below. Used lwjglx, a LWJGL2 compatibility layer for LWJGL3. Support for Minecraft 1.13 and above. Used GLFW stub. Support for Minecraft 1.17 (22w13a to be exact) and above. Used Holy GL4ES Game surface zooming. New input pipe rewritten to native code to boost performance. Rewritten entire controls system (thanks to @Mathias-Boulay) More to come! Known Issues Controller mods aren't working. Random crashes could happen very often on Android 5.x during game load or join world. With big modpacks textures could be messed up Probably more, that's why we have a bug tracker ;) License PojavLauncher is licensed under GNU GPLv3. Contributing Contributions are welcome! We welcome any type of contribution, not only code. For example, you can help the wiki shape up. You can help the translation too! Any code change to this repository (or iOS) should be submitted as a pull request. The description should explain what the code does and give steps to execute it. Credits & Third party components and their licenses (if available) Page 2 From Boardwalk's ashes here comes PojavLauncher! Despite having been launched in 2009, it enjoys robust health in terms of users, which is boosted in good measure thanks to its being managed by Microsoft. There are currently launchers for different versions and those who use the Android version can download PojavLauncher if they want to recover previous versions of the game. Run older versions of Minecraft on your Android This Java-based launcher allows users to run older versions of Minecraft, for the moment from 1.12.2 onwards, which is why it is perfect for those users who don't have the very latest phone because it is capable of functioning on phones and tablets with Android 5.0. However, it should be pointed out that it is an unofficial development maintained for altruistic reasons, so you might experience issues once it is running, such as the game being interrupted abruptly and the application stops. The developer says that these bugs will be fixed as new versions are released.
