DOCUMENT ID: 98 082 695 Date Added: 2009-04-15 Last Update: 2009-04-15 Last Update: 2009-04-15 Distribution: View public website Applicable Models Information The backlight that illuminates the keys on the computer keyboard is disabled by default. To turn it on, hold down the Fn key, then tap the Z key. Press the same function key combination fn + z to turn it off again. You can change the settings for the keyboard backlight in Toshiba Hardware Setup: Click the Windows Start button, then click All Programs, Toshiba, Utilities and Hwsetup.In HWSetup App, click the Lighting tab. The Lighting Properties page will appear, as shown below. Available options are: Auto-the The keyboard backlight will turn on when a key is pressed. It will stay on how to type, until you stop typing for the number of seconds specified in the backlighting time field, which you can increase or decrease to suit your preference. - The keyboard backlight stays on – until you press Fn + Z To turn it off Off.off – The keyboard backlight stays off – until you press FN + Z to turn it on. You need to restart your computer for changes to these settings to take effect.- SM/WA Export Control and Use of EULA Any software made available for download from this system constitutes acceptance of the Export Control Terms and the Terms in the Dynabook End-User License Agreement Both of which you can view before downloading any software. This is a super specific suggestion, but it was something that was driving me crazy. So for those people with the same situation, hopefully this will help. A few laptops ago, I didn’t realize when I bought it that it didn’t have a backlit keyboard. It didn’t take me long to realize I would never buy another laptop without that feature. This year I bought an XPS 13 laptop, which has backlight. However, it kept turning off after 10 seconds if I hadn’t interacted with it during that time. It was too short for my sympathies. I couldn’t find a way to change it, so I googled for a solution. I learned that apparently earlier versions of Windows had the setting built into the mobility setting, but at some point, that was no longer the case. I also learned of an application called Dell Feature Enhancement Pack you can install which includes a variety of settings, including one to change the time period in which the keyboard backlight would remain on. This application was last updated in March And according to the description is intended for Windows 7 and Windows 8 64-bit operating systems. But I tried it with my Windows 10 system and worked perfectly.note: I have a 64-bit version of Windows 10. I have no idea if it will work with a 32 bit version. The download of the function improvement package package Dell. >> Once you have downloaded the application, double-click the .exe file to open the installation wizard.fter you 'VE installed the package, click the Windows button on the taskbar and start typing the keyboard. When the keyboard (control (control Arrive in search results, click that to open the keyboard settings dialog box. Now you will have two cards including one for backlight. You can change the timeout settings. A Mac, press the button increases the brightness (it looks like a small rising sun). The most modern laptops have backlit keyboards, but some budget models donÃ ¢ â‚¬ â „¢ t has this function. This article explains how Turn on the keyboard light on the computers with this functionality, including Windows and MacOS computers. If the laptop or keyboard supports it, turn on the keyboard light is generally a matter of find King the right button. In some cases, it is possible that the light of the keyboard is disabled in the operating system settings or in the app supplied by the manufacturer of your computer. The button or buttons that usually control the light of the keyboard may not work in this scenario. If so, you will need to enable the keyboard light in the operating system settings or in the app provided by the manufacturer of your computer. Not all keyboards light up. Some manufacturers do not offer them to their lower end laptops or include only an extra cost option. If you can't get the keyboard climb, check with the manufacturer to make sure you have an illuminated keyboard. Windows computers assign one of the function keys to control the keyboard light, but it is not the same key for each computer. Each manufacturer sets the key regardless of the others. So, you need to look at the function keys, experiment with the function keys or contact the manufacturer to determine which key to push. Even the exact way of the functions of the Light Keyboard button also differs from one manufacturer to another. Some manufacturers only allow you to turn on or off the light, some provide a couple of brightness levels, and others have multiple brightness steps. The most common keys that control the keyboard light on the Windows computers are F5, F9 and F11. Here's how to turn on the keyboard light on Windows computers using the keyboard: locate the button that controls the keyboard light. The button may have a number f, or can include an icon that resembles three boxes with light rays that extend from the left side. Press the button, I.E. F5, F9 or F11. Ã Laukkonen / Lifewire Press the button again if you are not satisfied with the brightness. Ã, Jeremy Laukkonen / Lifewire If you press the correct key on the keyboard does not attract or adjust the light of the keyboard, then you need to change it in the Windows mobility settings or an app supplied by the manufacturer. This setting setting Always available in the Windows mobility settings, as it is an option control located in computer manufacturers. If you do not see the option in the Windows mobility settings, contact the manufacturer for more information on their proprietary app. Here's how to turn on or adjust a Windows keyboard light using the mobility settings: press Windows Key + X and click Mobility Center. Locate the keyboard's brightness. If there is no keyboard brace setting, or there is no specific section of the manufacturer to all, this option is not available on your computer. Contact the manufacturer for more information. Click on the cursor and drag it to the right. Two buttons control the keyboard light on Mac and MacBooks. A button lowers the brightness and the other raises it. If the keyboard light is turned off, then pressing the button increases the Bright it will light up. The Bright Decrease button is on the F5 key, and the Increase Brightness button is on the F6 button on most Macs. The exception is when a touch bar is present instead of the MAC function keys; In this case, the touch bar controls the light of the keyboard. If you have a touch bar, it's up to show everything and then touch the
