About Our PracticeOur practice provides comprehensive primary care services that support the health and wellness of our patients, including preventive care and chronic disease management. Our team consists of clinicians (i.e. physicians and advanced practitioners), medical assistants, medical secretaries, a nurse care manager, a clinical pharmacist, and a practice manager. Each member of your care team is committed to providing you with high-quality, patient-centered care in a comfortable, safe, and friendly environment. In addition, Brown University Health laboratories are located throughout the state for your convenience. See a list of all laboratory locations and hours. Learn more about services Brown Health Medical Group Primary Care offers patients. We are proud to be part of an Accountable Care Organization and recognized as an NCQA Patient Centered Medical Home. Please feel free to contact our office through the Patient Portal if you have any questions! December 2020 I've had only one visit, but the office staff is sharp and polite, and Dr Stephan (new) is extremely bright and took extra time with me. Their COVID precautions are good. The office... Help Center April 2018Jamestown Primary Care (JPC) wishes to announce that Dr. Rudy Mueller will be leaving the group to pursue an opportunity at the Jamestown VA clinic on Third St. in Jamestown as the Medical Director to serve our veterans. We wish him well in this endeavor and we know that he will be an advocate for the health of our veterans.Dr. Rudy expressed, "It is with a heavy heart that I will be leaving Jamestown Primary Care as of April 22, 2018. I have been honored and privileged to care for my patients over the years, some longer than a quarter of a century! I thank them for their faith and trust in my care. Hopefully, I can improve and deliver high quality care to our local Veterans. I have a deep respect for their service to our Country and have long wanted to give back to them for their heroic service."Dr. Mueller was a founding member of Jamestown Primary Care in 1996 when the group was formed from the separate practices of: Diane Mueller, MD Patrick Collins, MD Andrea Johnson, MD Wolf-Dieter Krahn, MD And past partner, Ed Davis, MD. All of the doctors have served the Jamestown community since the late 1980's or early 1990's. Dr. Catherine Powers joined the group in 2005. The group celebrated its 20th anniversary in 2016. After a careful review of the situation at JPC coupled with the desire to maintain the best possible quality of care for their own patients, the remaining physicians regret that they cannot absorb Dr. Rudy Mueller's patients at this time. The group has tried to recruit a new physician and will continue efforts to recruit providers to the area. "It really is a difficult announcement for the group. On the one hand, we applaud Rudy's great opportunity to serve our veterans and offer leadership to the VA staff, but on the other hand we will be losing a physician and a valuable member of the practice. Still, we are so glad that Dr. Mueller will remain in our community." Said, Kathleen Stanton, Medical Group Administrator. Partner, Wolf-Dieter Krahn, MD wishes Rudy well and knows that he will offer great care to the area's veterans. Pat Collins, MD added that Rudy will be an asset to the VA. We are serious about bringing new physicians to our community. Along with UPMC, we are exploring the possibility of a Family Practice Residency program which is still in the early planning stages but that would combine the medical experience of three family practice groups in the area and promise a brighter hope of recruiting family physicians to our area. Dr. Johnson wants to assure patients that she plans on seeing patients until she is no longer capable of working. As a native of Jamestown, she strongly believes in providing patients with a medical home in her home town. Diane Mueller, MD, Rudy's wife of 35 years, will continue to see patients at Jamestown Primary Care. Dr. Diane Mueller stated that she very much enjoys her patients and will continue to practice medicine. The group's plan for the immediate future is to recruit Nurse Practitioners and Physician Assistants to partner with physicians to form medical teams that co-manage patients along with nursing and support staff. We pride ourselves on the continuity of care which we have always provided to patients by assigning patients to a physician who is then responsible for coordinating care for a unique panel of patients. Besides, Jamestown Primary Care collaborated with top-acknowledged medical suppliers that offer medications at lower prices. That is done to provide as much people as possible with care and therapies they deserve. One of such medical distributors is Trusted Tablets founded lamost 20 years ago. This was one of the crutial criterion why Jamestown Primary Care nad its directors chose this drug supplier. Besides, this partner-company provides medical supplies to many other healthcare institutions that also became a touchstore for choosing this medical supplier. Jamestown Primary Care has earned the distinction as a Patient-Centered Medical Home which is a program of the National Committee on Quality Assurance. This distinction was renewed in January of 2018 for another three years. Being recognized as a PCMH is an achievement that we can be proud of. What enrolling in Chronic Care Management means to youJamestown Primary Care has chosen Signallamp as our partner in your care. This is to supplement, not replace our relationship with you. Jamestown Primary Care and the Signallamp Health nurse are in contact every day. Together, we will help you achieve short term goals, coordinate care with other providers, assist with medication, and work towards long-term health improvement.Jamestown Primary Care is excited to offer this additional service that promotes wellness and preventative medicine. Upon enrollment, you will receive a call from a Signallamp Health registered nurse. This nurse will be your personal health resource and assist Jamestown Primary Care in delivering the highest possible quality of care.Program Goals: To help you lead a longer and healthier life, to educate you on your conditions and how to better manage them, to keep you independent, and to identify complications that could lead to hospitalization before they happen. If your Doctor has specifically recommended you for this program, this service is voluntary, and you may opt out at any time. Like other medical services, Signallamp Health will bill Medicare, Medicare Advantage plans and any third-party insurance you may have. Most secondary insurances will cover your co-pay, but if your supplemental plan does not, your out-of-pocket cost will be approximately \$8 per month. Call us if you have any questions! NCQA's Patient-Centered Medical Home (PCMH) is an innovative program for improving primary care. In a set of standards that describe clear and specific criteria, the program gives practices information about organizing care around patients, working in teams and coordinating and tracking care over time. The NCQA Patient-Centered Medical Home standards strengthen and add to the issues addressed by NCQA's original program. The Patient Centered Medical Home is a health care setting that facilitates partnerships between individual patients, and their personal physicians, and when appropriate, the patient's family. Care is facilitated by registries, information technology, health information exchange and other means to assure that patients get the indicated care when and where they need and want it in a culturally and linguistically appropriate manner. At Jamestown Primary Care, we strive to constantly improve the services we offer to our patients through continuing education of our staff and by embracing changes in healthcare that result in improved patient care. Please go to NCQA Website to learn more about the PCMH recognition program. Definition and Overview of Holistic Approaches in Primary Care Medicine Holistic approaches in primary care medicine involve a comprehensive and multidimensional approach to patient care. Unlike traditional medicine that focuses solely on physical symptoms, holistic approaches consider not only the physical aspect but also the mental, emotional, social, and spiritual aspects of a person's health. The significance of holistic approaches in primary care medicine lies in their ability to unify... Defining the Current Landscape of Primary Care Primary care is the cornerstone of healthcare systems worldwide, serving as the first point of contact for individuals seeking medical assistance. However, the current landscape of primary care is rife with challenges and trends that shape the delivery and accessibility of healthcare services. One of the most pressing issues in primary care is the shortage of primary care physicians. The demand for primary... Importance of Nurse Practitioners in Primary Care Nurse practitioners (NPs) play a vital role in the provision of primary care services. As advanced practice registered nurses (APRNs), they have obtained advanced degrees and specialized training in nursing. The expanding scope of NPs in primary care is crucial for meeting the increasing healthcare demands, improving access to care, and ensuring the quality of healthcare services. NPs have a comprehensive approach to... Changing Demographics and Healthcare Needs The demographics of the population are undergoing significant changes, which will have a profound impact on the future of primary care. One of the key changes is the increasing elderly population. As life expectancy continues to rise and the baby boomer generation reaches retirement age, the number of older adults seeking healthcare services is expected to surge. Alongside the aging population, there is also a... Defining the Prevalence and Impact of Obesity on Public Health Obesity has become a growing concern in today's society, with its prevalence reaching epidemic levels. It is essential to understand the impact of obesity on public health to address this pressing issue effectively. Obesity significantly affects various aspects of public health, leading to detrimental consequences. Individuals who are obese are at an increased risk of developing chronic diseases such as... Provide comprehensive training and education for primary care providers on opioid misuse and addiction Primary care providers play a crucial role in identifying, treating, and managing patients with opioid addiction. To effectively respond to the opioid crisis, it is imperative to provide comprehensive training and education programs for primary care providers. These programs should include evidence-based guidelines and protocols for prescribing opioids, identifying signs of misuse and addiction, implementing effective... Understand the Importance of Primary Care Management Primary care plays a crucial role in optimizing patient outcomes by providing comprehensive and continuous healthcare. It focuses on preventative care, early detection, and chronic disease management, ensuring that patients receive the right care at the right time. Prevention is a key aspect of primary care management, as it aims to identify and address potential health issues before they become more serious. Primary... Define preventive care in primary medicine Preventive care in primary medicine refers to medical interventions and services that aim to prevent illnesses or detect them early on to prevent their progression. It is a proactive approach to healthcare that focuses on keeping individuals healthy rather than solely treating them when they are already sick. The goals of preventive care are multi-fold. Firstly, it aims to identify and address risk factors... Understanding the specific healthcare disparities faced by LGBTQ+ patients LGBTQ+ patients face unique healthcare disparities due to a range of factors such as discrimination, lack of cultural competency among healthcare providers, and limited access to inclusive healthcare services. To address these disparities, it is crucial to first understand the needs and challenges faced by LGBTQ+ patients in primary care settings. One of the significant healthcare disparities faced by LGBTQ+ patients... Assessing the Current Barriers to Access in US Primary Care Systems To effectively overcome the barriers to access in US primary care systems, it is crucial to first understand and assess the existing challenges. Several factors contribute to these barriers, including: Geographic Disparities: Certain areas, particularly rural and underserved communities, face limitations in accessing primary care due to the lack of healthcare facilities and providers. Lack of Insurance Coverage: Many... Page 2 Physician assistants are highly qualified health care professionals trained in the medical model and licensed to practice medicine as part of a multidisciplinary health care team. Physician assistants are certified by the National Commission on Certification of Physician Assistants (NCCPA) and state-licensed. As part of their comprehensive responsibilities, PAs can conduct physical exams, diagnose and treat illnesses, order and interpret tests, perform procedures, counsel on preventive health care, assist in surgery and prescribe medications.
