"Focus Issue on Legacy Information Systems and Business Process Engineering: a Business Perspective of Legacy Information Systems". *Communications of the AIS*. 2 (7): 1–27. ^ Archibald, J.A. (May 1975). "Computer Science education for majors of other disciplines". *AFIPS Joint Computer Conferences*: 903–906. Computer science spreads out over several related disciplines, and shares with these disciplines certain sub-disciplines that traditionally have been located exclusively in the more conventional disciplines ^ Denning, Peter (July 1999). "Computer Science: The Discipline". *Encyclopaedia of Computer Science* (2000 Edition). The Domain of Computer Science: Even though computer science addresses both human-made and natural information processes, the main effort in the discipline has been directed toward human-made processes, especially information processing systems and machines ^ Coy, Wolfgang (June 2004). "Between the disciplines". *ACM SIGCSE Bulletin*. 36 (2): 7–10. doi:10.1145/1024338.1024340. ISSN 0097-8418. S2CID 10389644. Computer science may be in the core of these processes. The actual question is not to ignore disciplinary boundaries with its methodological differences but to open the disciplines for collaborative work. We must learn to build bridges, not to start in the gap between disciplines ^ Hoganson, Ken (December 2001). "Alternative curriculum models for integrating computer science and information systems analysis, recommendations, pitfalls, opportunities, accreditations, and trends". *Journal of Computing Sciences in Colleges*. 17 (2): 313–325. ISSN 1937-4771. ... Information Systems grew out of the need to bridge the gap between business management and computer science ... ^ Davis, Timothy; Geist, Robert; Matzko, Sarah; Westall, James (March 2004). Technical Symposium on Computer Science Education | τ' εχνη: A First Step. pp. 125–129. ISBN 978-1-58113-798-9. In 1999, Clemson University established a (graduate) degree program that bridges the arts and the sciences... All students in the program are required to complete graduate level work in both the arts and computer science ^ Hoganson, Ken (December 2001). "Alternative curriculum models for integrating computer science and information systems analysis, recommendations, pitfalls, opportunities, accreditations, and trends". *Journal of Computing Sciences in Colleges*. 17 (2): 313–325. ISSN 1937-4771. The field of information systems as a separate discipline is relatively new and is undergoing continuous change as technology evolves and the field matures ^ Khazanchi, Deepak; Bjorn Erik Munkvold (Summer 2000). "Is information system a science? an inquiry into the nature of the information systems discipline". *ACM SIGMIS Database*. 31 (3): 24–42. doi:10.1145/381823.381834. ISSN 0095-0033. S2CID 52847480. From this we have concluded that IS is a science, i.e., a scientific discipline in contrast to purportedly non-scientific fields ^ Denning, Peter (June 2007). Ubiquity a new interview with Peter Denning on the great principles of computing, vol. 2007, p. 1. People from other fields are saying they have discovered information processes in their deepest structures and that collaboration with computing is essential to them. ^ "Computer science is the study of information" New Jersey Institute of Technology, Gutenberg Information Technologies Archived September 15, 2008, at the Wayback Machine ^ "Computer science is the study of computation". Computer Science Department, College of Saint Benedict Archived 2007-02-03 at the Wayback Machine, Saint John's University ^ "Computer Science is the study of all aspects of computer systems, from the theoretical foundations to the very practical aspects of managing large software projects." Massey University Archived 2006-06-19 at the Wayback Machine ^ Pearson Custom Publishing & West Chester University, Custom Program for Computer Information Systems, Pearson Custom Publishing, (2009) Glossary p. 694 ^ Polack, Jennifer (December 2009). "Planning a CIS Education Within a CS Framework". *Journal of Computing Sciences in Colleges*. 25 (2): 100–106. ISSN 1937-4771. ^ Hayes, Helen; Onkar Sharma (February 2003). "A decade of experience with a common first year program for computer science, information systems and information technology majors". *Journal of Computing Sciences in Colleges*. 18 (3): 217–227. ISSN 1937-4771. In 1988, a degree program in Computer Information Systems (CIS) was launched with the objective of providing an option for students who were less inclined to become programmers and were more interested in learning to design, develop, and implement Information Systems, and solve business problems using the systems approach ^ CSTA Committee, Allen Tucker, et alia, A Model Curriculum for K-12 Computer Science (Final Report), (Association for Computing Machinery, Inc., 2006) Abstraction & p. 2 ^ Freeman, Peter; Hart, David (August 2004). "A Science of Design for Software-Intensive Systems Computer science and engineering needs an intellectually rigorous, analytical, teachable design process to ensure development of systems we all can live with". *Communications of the ACM*. 47 (8): 19–21. doi:10.1145/1012037.1012054. ISSN 0001-0782. S2CID 14331332. Though the other components' connections to the software and their role in the overall design of the system are critical, the core consideration for a software-intensive system is the software itself, and other approaches to systematizing design have yet to solve the "software problem"—which won't be solved until software design is understood scientifically ^ Culnan, M. J. Mapping the Intellectual Structure of MIS, 1980-1985: A Co-Citation Analysis, *MIS Quarterly*, 1987, pp. 341–353. ^ Keen, P. G. W. (2010) On Using Spheres of Meaning to Define and Dignify the IS Discipline. *International Journal of Information Management*, 30, 13–20. It employs the philosophy of the late Herman Dooyeweerd to differentiate distinct aspects or 'spheres of meaning'. The paper suggests that while computer science finds the formative aspect, of shaping, structuring, processing, of central interest, and business and organizational fields find the economic and social aspects of central interest, the Information Systems field can find the lingual aspect of central interest while making links with the aspects of the neighbouring disciplines. ^ International Journal of Information Management, 30, 13–20. ^ "Information Systems".
