Click on the Dolphin icon on the screen below. Delete data. Check out the course browser. Delete selected data. Click the "Settings" icon in the upper right corner of the screen. Clear browsing data. Check out the course browser. Clean up. Remember that it is recommended to delete the course when using a borrowed device. Thanks for telling us! Get the latest tech news every day, follow us, why us! Your Android device's browser is a big weak point for your privacy. Smartphones and tablets disappear on public Wi-Fi networks and are more likely to be stolen or mispriced than a laptop. To prevent someone from recovering your information, you should regularly delete your browser course on Android. But how? The methodology is not always as clear as in a desktop browser. No panic! How to remove the browser course in seven of the most popular Android browsers: Chrome, Firefox, Opera, Dolphin, UC Browser and Braver Browser. Remove the browser course on the image Chrome 2. The first is chrome. It is the most popular Android browser and is used by about 85 percent of all Android owners. Fortunately, deleting your phone course is easy in this browser. To get started, open Chrome and go to menu > go to course or type chrome://date in the search box. The application loads its course. At the top of the window is a button clearly labeled "open browsing data". Click on it. Now you can decide which data you want to delete. At the top of the page, select your time zone and activate the corresponding checkbox. There are main and secondary tabs that you can change. Whatever you use, be sure to check your browsing history. When you're ready, wipe the data. Removing the browser course for Firefox 2 images is a similar process for Chrome. Open your browser and click on the three vertical dots in the upper right corner. Select a course from the menu. Just like in Chrome, you see a big button to open the browser course, only this time it's at the bottom of the page. However, unlike Chrome, it's not possible to specify which data you want to delete. The app only provides an on-screen promptConfirm your action. Press OK, the data will be deleted. 2 Opera Scanning History Deleting is a bit more complicated. When the browser is open, find the opera logo in the lower right corner and press. A small window will open. There are four icons at the top of this window. Select the gear icon to access the browser settings. Then collect the scanned data until it is clean. Tap and mark the confirmation box next to the data you want to delete. You can select saved passwords, scan history and cookies and data. When you are happy with your choice, press OK. 2 Chrome, Firefox and Opera images together account for more than 90% of all Android users. To complete this manual, let's look at some of the most popular browsers. If you use Dolphin, you will discover that deletion is tracked in the footsteps of the opera. Instead of accessing different settings using the menu icon in the top corner, you need to touch the Dolphin icon below the screen. The window will open. Select the data here. Again, you can choose the type of data to be deleted. Your options are scanning history, cache and site data, cookies, form data, passwords and access to location. Click Clear Selected Data to clear the browser history. 2 Images UC Browser is a stable alternative to Android, an operating system, if you want to retreat from the current main options, even if it is not very well known. Deleting the history of your browser is the most difficult on this list. Start by touching three horizontal lines below the screen. Select the yellow icon labeled with the symbols of the past and the country in the pop -up menu. Touching the icon will first display a list of bookmarks. Drag to the left to view the scan history. You can find the deletion button in the lower right corner. Tap it and then confirm your decision by selecting deleting the confirmation screen. 2 Images Brave Browser is a new concept in the web scan world. In the ever -increasing competition, the browser shines thanks to the advertising reward program and the ability of readers to focus on sites that use the base cryptocurrency (\$ BAT). Bat really grew and became one of the 30 best cryptocurrencies in the world. Brave is with chromium, so the browsing history deletion process is very similar to Chrome. Start by touching three vertical points in the lower right corner to delete the scan history from Brave's operating system on Android andBeyond the pop-up menu. Select "Pure imaging data" at the top of the window. Use different flags here to choose exactly what kind of data you want to delete and save. Like Chrome, you can use the tabs at the top of the window to switch between core and additional features. (To learn more, read the full guide on how Brave Browser works on our sister's blocks.) Like Brave Browser, the 2 images try to do something a little different. It claims to be the world's first environmentally friendly browser. The money the company earns from Internet research is used to fund forest regeneration programs around the world; More than 60 million trees have been planted to date. According to the company's literature, one kilogram of CO2 is removed from the atmosphere for each search. Chrome also provides the basics. So, to remove your viewing history on ekosia, open the app menu and history > clear your viewing data and select the categories you want to delete.
