Verify the eSpring unit is powered on; if no lights appear, check the power cord connection and wait five minutes before re-plugging it in. If lights flicker or don't appear, reset the device by unplugging it for five minutes. Look out for the red telephone icon on the display - if present, disconnect the unit and contact customer service, as this indicates critical malfunction. Ensure the top shroud is shut; if not, the blue cup icon will go dark, and the device will beep. Replace the purification cartridge when the Install Cartridge light appears or upon detecting musty tastes. Flush the system by running cold water through it for three minutes to address persistent musty tastes. Clean the screen inlet and treated water port with a brush to fix reduced water flow rates. Check for leaks at the diverter, and if present, hand-tighten the nuts. If leaks occur elsewhere, contact eSpring directly to repair your tubing. A normally functioning device displays blue icons for water drop, cup, cartridge, and life. Understanding these lights is crucial for troubleshooting issues. The eSpring is not designed to remove sulfur, calcium carbonate, arsenic, or iron; if you notice orange water, unpleasant odors, or sediment/flakes, it may be present in your water. When your UV filter's lifespan has been reached (based on time or water usage), you will be alerted to replace it. The Replace Cartridge gauge will flash and beep, indicating that it's time for a new filter. However, if you've ordered one already, you'll receive a replacement ready to use. Additionally, the eSpring Water Purifier has a sophisticated monitoring system that tracks your water usage and alerts you when the UV filter needs to be replaced. The device will flash and beep at regular intervals to remind you of this important maintenance task. Please note the following important information before installing and maintaining your eSpring Water Purifier: * Always follow safety precautions when using an electric appliance. * Use only cold, bacteriologically suitable water with the purifier. * Review all instructions carefully to ensure you have all necessary parts and tools. * Properly installed tubing is crucial for proper function. If you encounter any issues during installation, please contact our customer support at 1-800-253-6500 for assistance. Also, refer to the provided manual sections on: * Installation and maintenance * Important safety precautions * Above counter diverter installation (10-0188-CA) * Below counter installation * Preparation for faucet or dispensing device * Troubleshooting common issues **Troubleshooting and Maintenance** If your eSpring Water Purifier is not functioning properly, check the following issues: * Check if the treated water screen is clogged. If so, clean it with a brush. * Verify that the water flow rate out of the Diverter has not decreased due to a clogged screen on the treated water port. * Clean or replace the screen as needed. **Replacing the Cartridge** To replace the cartridge: 1. Lift the handle on the Bracket. 2. Pull straight up to remove the used Cartridge and Bracket. 3. Refer to the exploded view of the eSpring Water Purifier for assistance. **Installation Instructions** To install the eSpring Water Purifier: 1. Follow the manufacturer's instructions for installation, including preparation of the under-sink area. 2. Ensure that all connections are secure and watertight. 3. Test the system by running cold water through it. **Important Safety Notes** * The eSpring Water Purifier is designed to be used with only cold, bacterially safe (potable) water. * When using electronic devices, always follow basic safety precautions. * Consult the user manual for specific installation and maintenance instructions. **Limited Warranty** Amway offers a limited warranty on the eSpring Water Purifier. If you experience any defects or issues, contact Amway's customer service department for assistance. 1. Instrucciones para verificar la instalación del purificador de agua eSpring antes de iniciar.
