Quickly access the manual for your Kenmore appliance by entering your model number in the search bar below. The model number should be at least 11 characters long and without special characters. If you can't find your appliance's user guide, enter your model number to access owner's manuals for various Kenmore products, including washers, dryers, dishwashers, refrigerators, freezers, ice makers, ovens, ranges, stovetops, microwaves, and more. Kenmore manuals provide important information on parts and accessories, helping you get the most out of your appliance. Downloading an official Kenmore manual from their website is also a convenient way to obtain a backup in case your original document goes missing. Household fuse blown or circuit breaker tripped? Check hot and cold water faucets as well as water supply hoses for obstructions. Ensure a VOM or DVM with sensitivity of at least 20,000 ohms per volt DC is used to perform tests. Examine all connections before replacing components, looking out for broken wires, loose connections, or wires not fully seated in connectors. Corrosion on connectors is the most common cause of control failure, so be prepared to disconnect and reconnect wires throughout testing. When checking connectors, ensure wires are securely attached and metal barbs are engaged. For service technicians only: perform voltage checks with all connectors attached, and resistance checks with power cord unplugged and wiring harness or connectors disconnected. Display fault/error codes will show explanations and recommended procedures. Some common error codes include: * "PF" for power failure, which flashes if the washer loses power during a cycle. Press START to continue the cycle from where it left off. * "FL" for overfill condition, which occurs when excessive water in the tub triggers the flood switch. The beeper will repeat a warning beep every 10 seconds until the flood switch resets or power is discontinued. * "Er" for processor reset error, which displays if the control failed to save cycle information during a power failure. Press STOP/CANCEL to clear the display. * "LF" for long fill, which flashes if water fill time exceeds 10 minutes and water valves are turned off. Press STOP/CANCEL to clear the display.
